

## **Hydroelectric Generator Maintenance Beginning June 14 6/9/2021**

The hydroelectric team will be conducting regular preventative maintenance and inspections on the turbine shafts of the hydroelectric generators at Lake McQueeney, Lake Gonzales (H4), Meadow Lake (Nolte Dam) and Lake Placid (TP4) beginning Monday, June 14. Work is anticipated to take between five to seven business days per generator, with six generators in total. While this maintenance activity may involve the spilling of water at each dam, we do not anticipate a lowering of the current lake levels. Stay tuned to [GVLakes.com](http://GVLakes.com) for the latest updates on the Guadalupe Valley Lakes.
