

ASX Announcement

10th June 2021

4,000m Diamond Drill Program commences at Rosie

HIGHLIGHTS

Rosie Project (100% DKM)

- 4,000m diamond drill program underway at the Rosie Nickel Project based on guidance from the Rosie Nickel Sulphide Scoping Study
- Drilling aims to:
 - Increase confidence in mineralisation in the Upper North area
 - Test at depth below south eastern area (previously known as Nariz)
 - Collect PGE rich oxide sample for PGE recovery/metallurgical testwork from near surface
- Results from this program will be incorporated into an updated nickel resource and mining model.

Duketon Mining Ltd (DKM) is pleased to announce the commencement of a 4,000m diamond drill program at the Rosie Nickel Project. The program is designed to increase confidence in mineralisation in the upper north area, test at depth below the south eastern area (previously known as Nariz) and collect PGE rich oxide material from directly above the sulphide deposit for assay and PGE recovery/metallurgical testwork (see Figure 2). These three areas have been identified from the Rosie Nickel Sulphide Scoping Study as having potential upside by either impacting early cash flow or extending the life of mine (see ASX announcement 28th April 2021).
