ASX Market Announcements
Australian Securities Exchange Limited
Sydney NSW 2000

Monthly Net Tangible Asset Update

The unaudited **pre-tax** net tangible asset (**pre-tax NTA**) backing per share of Platinum Asia Investments Limited (**PAI**) as at 31 May 2021 was \$1.3534 per share (as at 30 April 2021 it was \$1.3496).

The unaudited **post-tax** net tangible asset (**post-tax NTA**) backing per share of PAI as at 31 May 2021 was \$1.2828 per share (as at 30 April 2021 it was \$1.2789 per share).

The NTA was calculated in accordance with Australian Accounting Standards using the last sale price to value investments. Investments were stated at market value and for the post-tax NTA, after provision for tax on **both** realised and unrealised income and gains.

At 31 May 2021, the PAI share price was \$1.23.

The 31 May 2021 monthly update for PAI is attached to this announcement. For more information in relation to PAI please refer to the website at:

MARKET UPDATE AND COMMENTARY

- China's economy strong, but slowing marginally.
- India's COVID tragedy impacting the economy, but market looks through it.
- South Korea deals with huge export growth.

PAI posted a small positive return in May, driven in particular by China Merchants Bank, Ping An Bank and Chinese consumer discretionary stocks Anta Sports, Trip.com, Yum China and Li Ning, as the Chinese economy continued its strong performance post COVID. Detractors for the month were a mixed bag, but notably Alibaba continued its share price malaise following regulatory scrutiny and was a negative contributor for the month. That said, we believe the stock remains attractively valued given its dominant position and expected ongoing growth potential.

China's economy – strong, but slowing at the margin

China's April wholesale car sales were up 10.8% year-on-year, April outstanding loan growth was up 12.3% year-on-year and April M2 money supply increased 8.1% year-on-year (Source: CICC). Clearly, Chinese economic performance remains robust. However, it appears to be slowing at the margin. Short-term and interbank interest rates have eased as government attempts to prevent overheating appear to be working (Source: FactSet, CICC). Upstream inflation is very high: last month the April Producer Price Index was released with a reading of 6.8% versus the prior April, while the Consumer Price Index was merely 0.9% year-on-year (Source: CICC, Reuters). There are likely some one-offs in this, notably an easing in food prices, with greater availability of pork following disease-related supply disruptions last year, but there is some degree of margin compression in downstream industries occurring as competitive end markets curb companies' ability to pass on rising input costs. Further, Yuan strength is likely crimping growth at the margin, with the USD/CNY exchange rate below 6.4 for the first time since 2018 in May (Source: FactSet).

Portfolio holding **ZTO Express**, China's largest logistics and fulfilment company, announced its first quarter 2021 results in late May. Revenue rose 65% versus 2020 and non-GAAP net profit rose 23% (non-Generally Accepted Accounting Principles is an alternative accounting method used to measure the earnings of a company), parcel volume rose 89% and the company's market share rose 1.5% to 20.4% (Source: Company filings, CICC).

Portfolio holding **JD.com**, a Chinese e-commerce giant, announced its first quarter 2021 results. Revenue increased 39% versus the prior year and the company posted a profit of RMB4 billion (Source: Company filings, CICC).

One of the portfolio's key contributors in recent months, Chinese online travel agent **Trip.com**, recorded greater than 30% growth in order volume for the five-day Labour Day period (May 1-5) compared to 2019 (Source: CICC).

In late May, Xinhua News Agency reported that China will allow urban couples to have three children, up from the previous two and further reversing the decades of the One Child Policy. We view this as peripheral – China's move to allow two children has had little effect.

May saw further ambitious industrial targets in China. The New York Times reported on the country's target to produce eight million electric vehicles by 2028, roughly equivalent to the rest of the world combined. Sina.com reported on China's targets around chemicals self-sufficiency following the conclusion of the 14th Five-Year Plan: the country aims to be 70% self-sufficient in high-end polyolefins from 50% currently, 85% self-sufficient in engineered and specialty plastics and an exporter of polyurethane materials by 2025.

India's COVID outbreak biting, but market looking through it

Portfolio holding **HDFC Bank** chief executive Sashidhar Jagdishan disclosed in early June that India's most valuable lender could see a rise in loan delinquency as business momentum and collections have slowed since the second COVID wave engulfed the country. "For the first time in as many years, we don't have visibility on what is going to happen and, hence, near-term expectations are tepid," Jagdishan said. (Source: Economic Times). That said, the market appears to be looking through the COVID outbreak, with India's Nifty 50 index up on a one-month, six-month and 12-month basis (Source: FactSet).

South Korean exports surging, may be forced to raise rates

Semiconductor and car shipments helped drive a 45.6% increase in South Korea's May exports from a year earlier, posting the fastest growth since August 1988 and extending their expansion to seven months in a row (Source: Reuters). As with China, this leaves monetary officials with the task of avoiding overheating amid a colossal external sector stimulus. In late May, the Bank of Korea (BOK) indicated that it was prepared to increase interest rates in 2021. The BOK is forecasting headline inflation of 1.8% in 2021, but this is likely to be exceeded. This overshoot, combined with the fastest property price inflation since the early 2000s, may be enough to trigger a tightening by November (Source: Wigram Capital Advisers).

All in all, we believe Asia is well placed to benefit from a global reopening and reinvigoration of capital expenditure and trade following the trade war. Its economies are further advanced in their post-COVID recoveries and those like India, which continue to suffer, are seeing equity markets look through this. Many markets in the region are cheap and earnings growth expectations are high.
