Disclaimer

Certain information contained in this presentation and statements made orally during this presentation relates to or is based on studies, publications, surveys and other data obtained from third-party sources and Verrica's own internal estimates and research. While Verrica believes these third-party sources to be reliable as of the date of this presentation, it has not independently verified, and makes no representation as to the adequacy, fairness, accuracy or completeness of, any information obtained from third-party sources. While Verrica believes its internal research is reliable, such research has not been verified by any independent source.

This presentation contains forward-looking statements. Forward-looking statements are neither historical facts nor assurances of future performance. Instead, they are based on our current beliefs, expectations and assumptions regarding the future of our business, future plans and strategies, our clinical results and other future conditions. All statements other than statements of historical facts contained in this presentation, including statements regarding future results of operations and financial position, business strategy, interactions with the FDA, the Company's expectations with regard to the potential approval of the NDA for VP-102, the PDUFA goal date, the potential benefits and potential commercialization of VP-102 for the treatment of molluscum, if approved, current and prospective product candidates, planned clinical trials and preclinical activities, product approvals, degree of market acceptance of approved products, research and development costs, current and prospective collaborations, timing and likelihood of success, plans and objectives of management for future operations, and future results of anticipated product candidates, are forwardlooking statements. The words "may," "will," "should," "expect," "plan," "anticipate," "could," "intend," "target," "project," "estimate," "believe," "predict," "potential" or "continue" or the negative of these terms or other similar expressions are intended to identify forward-looking statements, although not all forward-looking statements contain these identifying words.

The information in this presentation, including without limitation the forwardlooking statements contained herein, represent our views as of the date of this presentation. Although we believe the expectations reflected in such forwardlooking statements are reasonable, we can give no assurance that such expectations will prove to be correct. Accordingly, readers are cautioned not to place undue reliance on these forward-looking statements. Except as required by applicable law, we do not plan to publicly update or revise any forward-looking statements contained herein, whether as a result of any new information, future events, changed circumstances or otherwise. No representations or warranties (expressed or implied) are made about the accuracy of any such forward-looking statements. The forward-looking statements in this presentation involve risks and uncertainties that could cause actual results to differ materially from those reflected in such statements. Risks and uncertainties that may cause actual results to differ materially include uncertainties inherent in the drug development process and the regulatory approval process, our reliance on third parties over which we may not always have full control, and other risks and uncertainties that are described in our Annual Report on Form 10-K for the year ended December 31, 2019, filed with the U.S. Securities and Exchange Commission (SEC) on March 13, 2020, our Quarterly report on Form 10-Q for the guarter ended September 30, 2020, filed with the SEC on November 9, 2020, and our other filings made with the SEC. New risk factors and uncertainties may emerge from time to time, and it is not possible to predict all risk factors and uncertainties. There can be no assurance that the opportunity will meet your investment objectives, that you will receive a return of all or part of such investment. Investment results may vary significantly over any given time period. The appropriateness of a particular investment or strategy will depend on an investor's individual circumstances and objectives. We recommend that investors independently evaluate specific investments and strategies.

2

Investment Highlights

Focused on Clinician-Administered Therapies With Potential for Reimbursement as a Medical Benefit

PDUFA Goal Date of June 23, 2021 for YCANTH[™] (VP-102) for the Treatment of Molluscum

YCANTH[™] (VP-102)

- In Development to Address Two of the Largest Unmet Needs in Dermatology
 - U.S. prevalence of ~6 million in molluscum contagiosum⁽¹⁾ and ~22 million in common warts⁽²⁾
 - No FDA-approved drugs to treat molluscum or warts
- □ June 23, 2021 PDUFA Goal Date for the Treatment of Molluscum
 - Achieved statistical significance for primary endpoints in two pivotal trials (P-value < 0.0001)
- Innovative Product Candidate
 - Proprietary drug-device combination of formulation and single-use applicator
- Physician Acceptance
 - 95% of Pediatric Dermatologists have used API⁽³⁾
- Payer Research Suggests Favorable Reimbursement Landscape
- On March 2, Torii Pharmaceutical Exercised Option Triggering 60-Day Period to Execute Exclusive License Agreement for Development and Commercialization of VP-102 in Japan

Dermatological Oncology

- U Worldwide rights for dermatological oncology, including basal cell and squamous cell carcinomas and non-metastatic melanoma, to LTX-315
 - First-in-class oncolytic peptide injected directly into tumor
- Desitive tumor-specific immune cell responses in multi-indication Phase 1/2 oncology trials
- Verrica to focus initially on development to treat basal cell and squamous cell carcinomas
- □ 5.4 million diagnoses annually in the U.S. of basal and squamous cell skin cancers⁽⁴⁾; patients typically treated with surgery
- Submission of U.S. IND anticipated during first half of 2021

Proven Team

- Industry-leading, experienced management team with extensive dermatology product launch experience
- August 2020

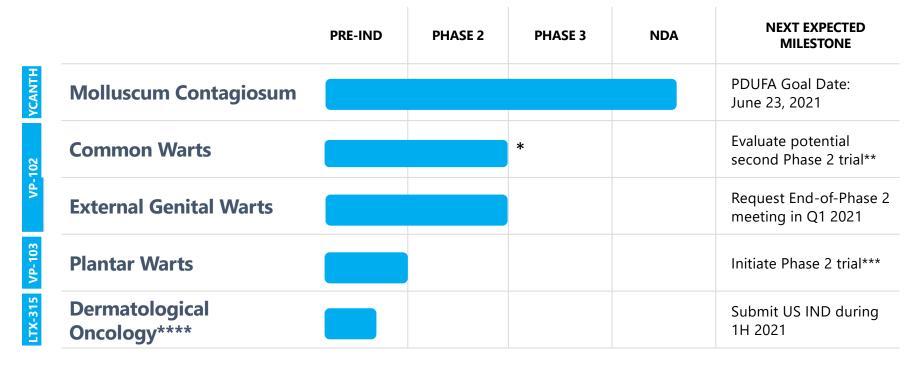

⁽¹⁾ Prevalence in the US of 5.1% to 11.5% in children aged 0-16 years. (Fam Pract. 2014 Apr;31(2):130-6). US Census estimates ~69.4MM children aged 0 to 16 years in 2016. (2) IMS National Disease and Therapeutic Index (NDTI) Rolling 5 Years Ending June 2016. Nguyen et al, Laser Treatment of Nongenital Verrucae A Systemic Review. JAMA Dermatology. 2016; 152(9): 1025-1033 (3) Based on a survey of 115 dermatologists the results of which have been extrapolated to pediatric dermatologists. 3 (4) Rogers JAMA Derm 2015; https://www.aad.org/media/stats-skin-cancer; https://www.skincancer.org/skin-cancer-information/skin-cancer-facts/

Verrica: Striving to Change the Game in Medical Dermatology

- Potential first and only FDA-approved product to treat Molluscum Contagiosum
- □ Innovative distribution model to eliminate physician cost of acquiring YCANTH
 - Forward-deployed based inventory model to allow physicians to pay for inventory only after the claim has been adjudicated and the patient agrees to treatment through RFID technology
- Enhanced physician revenue opportunity
 - Continued reimbursement under the CPT codes 11710 and 17111
 - Margin on sale of the product (typically 6%-10% of ASP dependent on health plan)
- □ HCP-administered procedure in office typically falls under the medical benefit with an assigned permanent J-Code
 - Medical benefit is often less managed by insurance if pricing stays below the specialty tier (list price of \$670)
- Patient responsibility typically averages 20% co-insurance off list price, before manufacturer co-pay applied

Our Product Portfolio

* Originally designed Phase 2 program completed.

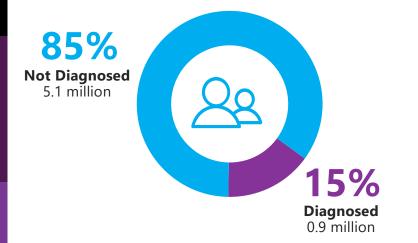

- ** Company evaluating potential for conducting an additional Phase 2 trial based on FDA feedback for Phase 3 trial protocol.
- *** Timing for initiating new clinical trials to be determined.

YCANTH[™] in Development to Address Two of the Largest Unmet Needs in Dermatology

Molluscum

US Prevalence of $\sim 6 \text{ million}^{(1)}$ with ~1 million diagnosed annually⁽²⁾

Common Warts

US Prevalence of ~22 million⁽³⁾ with ~1.5 million diagnosed annually⁽⁴⁾

(1) Prevalence in the US of 5.1% to 11.5% in children aged 0-16 years. (Fam Pract. 2014 Apr;31(2):130-6). US Census estimates ~69.4MM children aged 0 to 16 years in 2016.

(2) IQVIA projected dataset for 12 months ending October 2017

(3) IMS National Disease and Therapeutic Index (NDTI) Rolling 5 Years Ending June 2016. Nguyen et al, Laser Treatment of Nongenital Verrucae A Systemic Review. JAMA Dermatology. 2016; 152(9): 1025-1033 (4) IQVIA Anonymous Longitudinal Patient Level Data (APLD) for 12 months ending September 2018

7

THE PROBLEM Molluscum Contagiosum

Molluscum Background

OVERVIEW

Caused by a pox virus Primarily infects children, with the highest incidence occurring in children <14 years old Highly contagious

If untreated, lesions persist an average of 13 months, with some cases remaining unresolved for 2+ years

Often leads to anxiety and social challenges for the patients and parents and negatively impacts quality of life

Copyright © 2021 Verrica Pharmaceuticals. All rights reserved.

ETIOLOGY AND CLINICAL PRESENTATION

Transmission	Skin to skin contact		
	 Sharing of contaminated objects (e.g., clothing, towels, swimming pool toys) 		
Diagnosis & Symptoms	 Typically 10 to 30 lesions 100+ lesions can be observed Lesions may be the only sign of infection and are often painless Can be diagnosed with skin biopsy to differentiate from other lesions 		
Complications	 Skin irritation, inflammation, and re-infection Follicular or papillary conjunctivitis if lesions on eyelids Cellulitis 		

Current Treatments for Molluscum are not FDA-Approved and Have Many Limitations

Broad use limited by unproven efficacy, scarring, lack of availability, safety concerns & pain

Significantly undertreated patient population

Copyright $\ensuremath{\mathbb{C}}$ 2021 Verrica Pharmaceuticals. All rights reserved.

	DESCRIPTION	LIMITATIONS
Cryotherapy	Freezing the lesions with liquid nitrogen	Pain and scarringUnsuitable for use in children
Curettage	Using a curette or a surgical instrument with a scoop at the tip to scrape the lesions	Pain and scarringUnsuitable for use in children
Laser Surgery	Applying a laser to target and destroy the lesions	 Pain, cost and lack of availability Unsuitable for use in children
Topical Products	Applying various acids (e.g. salicylic acid), creams or blistering solutions to destroy the lesions	Unproven efficacy
Off-Label Drugs	Retinoids, antiviral medicines, or immune modulating therapies	Limited efficacySide-effects
Natural Remedies	Applying natural oils (e.g. tea tree oil) with antimicrobial properties	 Unproven efficacy Pain, irritation and allergic reactions

THE SOLUTION YCANTHTM (VP-102)

YCANTH[™] (VP-102) Is a Proprietary Drug-Device Combination of Cantharidin Administered Through our Single-use Precision Applicator

GMP-controlled new formulation of 0.7% w/v cantharidin

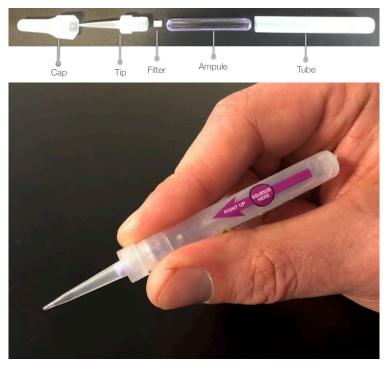

Consistent and shelf-stable

Single-use applicator to reduce crosscontamination and allow for more effective application of drug by HCP

Visualization agent to identify treated lesions

Bittering agent to deter oral ingestion

Clinician administered, In-Office Procedure

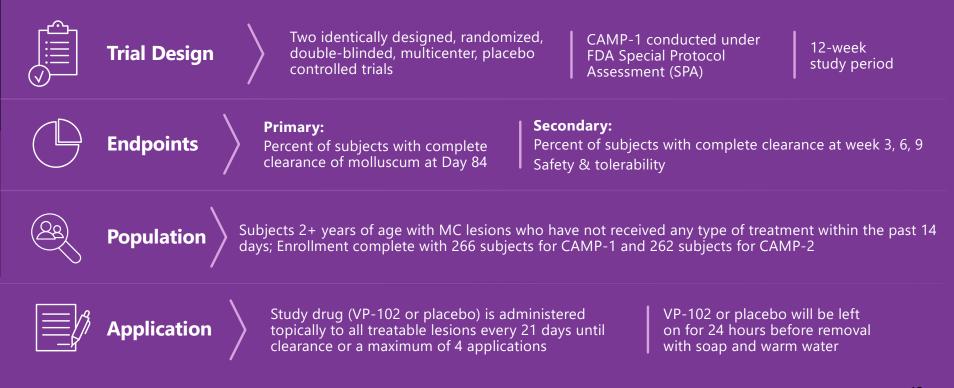

U.S. Regulatory Status

- NDA for VP-102 for molluscum contagiosum submitted in September 2019
- CRL received July 2020
 - No clinical safety or efficacy issues identified
 - Requests for additional information regarding certain aspects of CMC and Human Factors validation
- Resubmitted NDA in December 2020
 FDA acceptance of resubmitted NDA in February 2021
 PDUFA goal date: June 23, 2021

We Have Successfully Completed Two Pivotal Phase 3 Trials (CAMP-1 & CAMP-2) In Molluscum

Molluscum History for Subjects in Phase 3 Trials¹

	VP-102 (n=310)	Vehicle (n=218)
Baseline Lesion Count		
Mean (SD)	20.5 ± 23.1	22.5 ± 22.3
Median	12.0	15.5
Range	1-184	1-110
Time Since Clinical Diagnosis (days)		
Mean (SD)	122.9 ± 200.9	126.2 ± 198.7
Median	25.0	31.5
Range	1-1247	1-1302
Previous Treatment for Molluscum - no. (%)		
Yes	89 (28.7)	72 (33.0)
Atopic Dermatitis (AD) – no. (%)		
History or Active AD	50 (16.1)	35 (16.1)
Active AD*	23 (7.4)	20 (9.2)

*Active AD was determined by concomitant medication usage of the following medications during the study: topical corticosteroids, topical calcineurin inhibitors, and/or PDE-4 inhibitors

Note: Slide reflects pooled data from Phase 3 molluscum trials (CAMP-1 and CAMP-2)

MC Commercial Opportunity

Realizing the Molluscum Opportunity

US Prevalence of ~6 million in molluscum⁽¹⁾ with ~1 million diagnosed annually⁽²⁾

> 85% **Not Diagnosed** 5.1 million

(1) Prevalence in the US of 5.1% to 11.5% in children aged 0-16 years. (Fam Pract. 2014 Apr;31(2):130-6). US Census estimates ~69.4MM children aged 0 to 16 years in 2016. (2) IQVIA projected dataset for 12 months ending October 2017

Dermatologists are Familiar with API Used in YCANTH[™] (VP-102) & Would Use if Available

Physicians who do not use the API of YCANTH[™] (VP-102) **stated inaccessibility as a primary reason why they are not using**⁽¹⁾ \$ 87%

Physicians reported they would use YCANTH[™] (VP-102) if the cost of the drug was covered⁽²⁾

Pompei DT et al. Cantharidin Therapy: Practice patterns and attitudes of health care providers. Journal of the American Academy of Dermatology. 2013; 68(6). Survey of 400 healthcare providers, 87.7% of responders were US based dermatologists.
 Company survey of 40 physicians.

Physicians are Highly Favorable to YCANTH™ (VP-102) Profile

Derms and Ped Derms ⁽¹⁾	KEY REASONS TO USE IF APPROVED	
F C	Efficacy	Precise and pain free application
近 第 5.6	FDA approval	Convenience of administration
Pediatricians ⁽¹⁾	KEY REASONS	TO USE IF APPROVED
n ² 6 3	Efficacy	Fits into their current office model
□⊥∃ 0.5	Frustrated with not t	reating and having no viable options

Scale of 1 (unlikely to use at all) to 7 (highly likely to use)

(1) Physician Qualitative research- one-hour individual interviews [n=30 Pediatricians, 13 Dermatologist, 5 Pediatric Dermatologists]

Multiple Payer Research Studies Suggest Favorable Reimbursement Landscape for YCANTH[™] (VP-102)

	COHORT SIZE	AVERAGE LIVES COVERED
Medical Directors	7	9.8M
Pharmacy Directors	6	4.2M
IDN Stakeholders	2	6.5M

The 15 Payer Organizations and Plans Represented in the Interviews **Cover a Total of 105 Million Commercial & Medicaid Lives**

Source: Third party study commissioned by the Company.

Multiple Payer Research Studies Suggest Favorable Reimbursement Landscape for YCANTH[™] (VP-102)

Key Takeaways

 $\langle 1 \rangle$

Payers interviewed **recognize a significant unmet need** for molluscum contagiosum and lack of an effective treatment

2 Some of the **key concerns** mentioned about the undertreatment of the condition include the **risk of infection**, **scarring**, **or spread of the disease**

Payers **perceived YCANTH[™] (VP-102) to be highly favorable** based on the majority of patients experiencing clearance within 12 weeks

Given the unmet need and favorable clinical outcomes in Phase 2 trials, **payers anticipate the majority of patients would have access to YCANTH™ (VP-102)** with minimal to no restrictions

Source: Third party study commissioned by the Company.

Medical Benefit Advantages Over Pharmacy Benefit

	Medical Benefit	Pharmacy Benefit
Reimbursement for products administered in office by HCP	More common	Less common
Reimbursable upon launch prior to clinical review	More common	Less common
Subject to rebates and discounts in order to obtain formulary access	Less common	More common
Gross-to-Net Deductions	Typically, lower deductions than Pharmacy Benefit	Typically, higher deductions to meet rebate demands and costs of co-pay program
Patient obligation	Typically, averages 20% co- insurance off list price, before manufacturer co-pay applied	Prescription co-pay varies by plan

Integrated Commercial Approach with Multiple Strategic Levers

Commercial Strategy

Physician Choice of Distribution Model

	Buy-and-Bill	Specialty Pharmacy	
HCP Reimbursement			
Permanent J-code	Yes (within 1-2 quarters post-launch); Reimbursed under miscellaneous J-code until permanent J-code assigned	No	
Office visit fee	Yes	Yes	
Lesion destruction (CPT 17110, 17111)	Yes	Yes	
Margin on sale of productYes, typically 6%-10% of ASP (dependent on health plan)		No	
Distribution	Forward-deployed Inventory Model	Specialty Pharmacy Model	
	 Verrica sells product to distributor 	 RX filled by pharmacy network 	
	 Distributor supplies product on consignment basis to physicians 	 The pharmacy will also support prior- authorizations, if applicable 	
	 Allow physicians to pay for inventory after the claim has been adjudicated and the patient agrees to treatment through RFID technology 	 Pharmacy adjudicates claim with patients and applies co-pay program White bag delivery to physician 	

Pre-Commercialization Activities Ongoing

Engagement at Premier Venues & Industry Channels

VP-102 in Common Warts

Verruca Vulgaris (Common Warts)

OVERVIEW

Caused by human papilloma virus (HPV)

Infects patients of all ages

Persistent infection, highly refractory

Typically 2-5 lesions

No FDA-approved drug for the treatment of common warts

U.S prevalence of 22 million¹, with 1.5 million² diagnosed annually

ETIOLOGY AND CLINICAL PRESENTATION

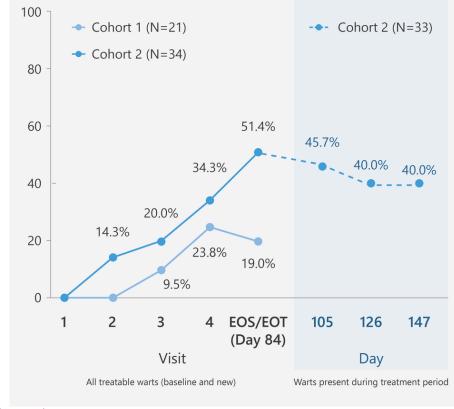

Transmission	Skin to skin contact	
	 Touching of contaminated objects 	
Diagnosis & Symptoms	 Dome shaped flesh-colored lesions commonly on the hands, fingers, knees or elbows Lesions may occur in groups or in a linear pattern 	K
	 Lesions can cause considerable pain and discomfort, may spread with skin trauma, and can be itchy 	
Complications	Scarring may occur	
	 Dyspigmentation of affected areas 	
	Bacterial superinfection of lesions	
	 Irritation, pain, and redness of surrounding skin 	

(2) IQVIA Anonymous Longitudinal Patient Level Data (APLD) for 12 months ending September 2018

We Have Successfully Completed a Phase 2 Study (COVE-1) in Common Warts

	Study Design	Efficacy, safety & tolerability	Open label stu	dv with two cohorts	Cohort 1: one center Cohort 2: four centers
\bigcirc	Endpoints /	Primary Percent of subjects with complete of all treatable warts (baseline and ne		of all treatable warts a	hieving complete clearance at Visits 2, 3, and 4 e in number (%) of treatable
	Patients Cohort 1: 21 subjects 2+ years of age with common warts, who have not received any type of treatment within the past 14 days Cohort 2: 35 subjects 12+ years of age with common warts, who have not received any type of treatment within the past 14 days				
	Application	Study drug (VP-102) is administered topically to each treatable wart to a maximum of 4 applications Cohort 1 is treated until clear, Coho receives one additional treatment a first visit clearance was observed up maximum of 4 total applications	rt 2 t the rt 2 rt 2 rt 2 rt 2 rt 2 rt 2 rt 2 rt 2	ency of administration is t 14 days (Cohort 1) or 2 Cohort 2) was allowed in Cohort 2	VP-102 will be left on for 24 hours before removal with soap and warm water 30

VP-102 Demonstrated Clinically Meaningful Efficacy on Primary Endpoint of Complete Clearance in COVE-1 Study¹

VP-102 in External Genital Warts

Condyloma Acuminatum (Genital Warts)

OVERVIEW

ETIOLOGY AND CLINICAL PRESENTATION

Caused by human papilloma virus (HPV)	Transmission	Skin to skin contactSpread through sexual contact
Lesions on the surface of the skin in the genital and perianal regions	Diagnosis & Symptoms	Can be flat, dome-shaped, keratotic, pedunculated and cauliflower-shaped
Highly contagious and recurrences are common		 Lesions may occur singularly, in clusters, or as plaques Lesions can be itchy, and can cause pain and
Treatment options have limitations		discomfort
Approximately 500,000 to 1 million cases of EGW are newly diagnosed per year in the United States ¹	Complications	 Irritation, pain, and redness of surrounding skin Dyspigmentation of affected areas Scarring may occur Bacterial superinfection of lesions

LTX-315

LTX-315 Overview

Induces Immunogenic Cell Death and a Tumor-specific Immune Response¹

OVERVIEW

First-in-class oncolytic peptide that is injected directly into a tumor to induce immunogenic cell death

Worldwide license in dermatological oncology² from Lytix Biopharma in August 2020

Verrica intends to focus initially on basal cell and squamous cell carcinomas as lead indications

IND submission anticipated during 1H 2021

 Camilio Oncoimmunology 2014
 All malignant and pre-malignant dermatological indications, except for metastatic melanoma and metastatic merkel cell carcinoma

$_{1}$) Kills the Tumor Cells

LTX-315 enters the cells and disturbs cell membranes, causing cell death and release of a patient's tumor specific antigens

² Triggers Immune Responses Targeting Tumor Cells

This allows the immune system to recognize, infiltrate, and attack cancer cells via dendritic cells and cytotoxic T cells

Non-Melanoma Skin Cancer

OVERVIEW	ETIOLOGY AND CLINICAL PRESENTATION			
Non-melanoma skin cancer includes basal cell and squamous cell carcinoma	Patient population ¹	 Estimated 5.4 million diagnoses of basal cell (BCC) and squamous cell (SCC) carcinomas annually Increasing age and sun exposure are risk factors 		
Basal cell carcinoma is the most common malignancy in humans ¹	Diagnosis & Symptoms ^{2,3}	 New or changing lesions on sun exposed skin Common on the head/neck BCC: Pink pearly papules with prominent blood vessels SCC: Pink, rough scaly papules, patches, or plaques Diagnosis through routine biopsy 		
Common treatments are invasive, painful, can cause scarring, and may require destruction of healthy tissue	Complications ^{3,4}	 Damage to healthy tissue, pain, permanent scarring Surgical complications include disfigurement, bleeding and infection Metastasis to other areas of the body/organs 		
	 Rogers JAMA Derm 2015; <u>https://</u> Combalia Derm Practic & Concep Gruber StatPearls 2020 Bailey Int J of Wom Derm 2019 	/www.aad.org/media/stats-skin-cancer: https://www.skincancer.org/skin-cancer-information/skin-cancer-facts/ vt 2020 42		

Current Treatments For Non-Melanoma Skin Cancer¹⁻³

Invasive procedures may lead to permanent scarring, pain, damage to healthy tissue, and recurrence

	DESCRIPTION	LIMITATIONS			
Surgical Excision	Using a scalpel to remove diseased tissue and healthy skin	 Invasive Can cause scarring/disfigurement, infection, pain 			
Mohs Surgery	Used in high risk NMSC or in special sites	 Invasive, may take several rounds Can cause scarring, disfigurement and pain 			
Electrodessication and Curettage	Minor surgical procedure to remove diseased tissue with sharp tool and cauterize the area	InvasivePainfulLikely to cause scarring			
Topical Agents	5-FU, ingenol mebutate, or imiquimod	 May only be efficacious in small, superficial tumors Local inflammatory reactions, systemic size effects 			
Oral Therapy	ERIVEDGE® (vismodegib) ⁴	 Approval limited to small subset of BCC and metastatic BCC Systemic side effects 			
Oral Therapy	ODOMZO® (sonidegib) ⁵	 Approval limited to small subset of BCC and metastatic BCC Systemic side effects 			
(4) Per Prescribing Information: a hedgehog pathway inhibitor indicated for the treatment of adults with					

(4) Per Prescribing information: a hedgehog pathway inhibitor indicated for the treatment of adults with metastatic basal cell carcinoma, or with locally advanced basal cell carcinoma that has recurred following surgery or who are not candidates for surgery and who are not candidates for radiation.
(5) Per Prescribing Information: a hedgehog pathway inhibitor indicated for the treatment of adult patients with locally advanced basal cell carcinoma (BCC) that has recurred following surgery or radiation therapy, or those who are not candidates for surgery or radiation therapy.

Regulatory Exclusivity and Intellectual Property

Verrica has Several Potential Ways to Maintain Exclusivity for VP-102

A Burl	Regulatory Exclusivity		5 years of exclusivity for cantharidin as API potentially available upon approval (potential for additional 6 months for pediatric exclusivity for common warts and plantar warts indications)			
٢	Compounding Pharmacies	\rangle	If VP-102 is approved, traditional compounding pharmacies will NOT be able to continue compounding cantharidin regularly or in inordinate amounts, except under patient specific circumstances as prescribed by a physician.	The FDA has the authority to regulate compounders. Improper compounding can result in monetary fines plus felony convictions in case of repeat offenses and intent to fraud/mislead.		
$\{ \overbrace{\bigcirc}$	Manufacturing	\rangle	to address stability issues with standard packaging and container/ and highly flammable cantha	ed into a supply agreement for naturally-sourced aridin; subject to specified minimum annual purchase and forecasts, supplier agreed that it will not supply aridin, any beetles or other raw material from which aridin is derived to any other customer in North America		
ţ	True Generic Unlikely	\rangle	Unlikely to receive approval under an ANDA due to uniqueness from patent pending protection and significant differences likely between YCANTH [™] (VP-102) and potential competitors	alence pod level approach that shows equivalence

Reinventing Skin Science

Overview of VP-102/103 Intellectual Property Portfolio

KEY CLAIMS AND PATENT APPLICATIONS	VALUE TO VERRICA
Our specific formulation, YCANTH [™] (VP-102), key safety additions and novel cantharidin formulations (PCT/US2014/052184) (PCT/US2018/036353)	May prevent generics from copying our ether-free formulation or from making similar formulations
Single use applicator containing cantharidin formulations (PCT/US2014/052184) (PCT/US2018/037808)	May prevent generics from utilizing a single-use applicator for cantharidin that contains both a glass ampule to maintain product stability and a filter placed prior to dispensing tip, which helps increase administration accuracy and prevents direct contact with skin
Specific design of our commercial applicator	May prevent generics from utilizing a similar applicator
Specific design of our commercial applicator (PCT/US2018/037808) (US 29/607744)	Design patent application allowed in the US
 Methods of use for cantharidin in the treatment of molluscum (PCT/US2018/037808 and PCT/US2018/036353) (PCT/US2014/052184) 	May prevent generics from a similar treatment regimen and label
Methods for purifying cantharidin and analyzing cantharidin or cantharidin solutions (PCT/US2016/14139)	May force generics to find alternative methodologies to produce GMP cantharidin or determine if their API or drug product is GMP compliant
Methods for complete cantharidin synthesis (PCT/US2015/066487) (PCT/US2018/054373)	Synthetic version would reduce risks of outside contaminants and environmental factors affecting the naturally-sourced API. May prevent generics competing with a synthetic version of cantharidin
Any patents issued from o	ur applications are projected to expire between 2034 and 2039.

Overview of LTX-315 Intellectual Property Portfolio

Product	Description	EU	US	ĄĮ	Other (*, pending)
LTX-315 PCT/EP2009/006744	Composition-of-matter claims	Granted ¹ , expires 2029	Granted, expires 2032	Granted, expires 2029	AU, BR*, CA, CN, IN, NZ, KR, RU, SG
LTX-315 T cell clonality PCT/EP 2017/05229	Methods-of-use claims	Pending, expires 2037	Pending, expires 2037	Pending, expires 2037	AU*, CN*, KR*

Our Product Portfolio

* Originally designed Phase 2 program completed.

- ** Company evaluating potential for conducting an additional Phase 2 trial based on FDA feedback for Phase 3 trial protocol.
- *** Timing for initiating new clinical trials to be determined.

Investment Highlights

Focused on Clinician-Administered Therapies With Potential for Reimbursement as a Medical Benefit

PDUFA Goal Date of June 23, 2021 for YCANTH[™] (VP-102) for the Treatment of Molluscum

YCANTH[™] (VP-102)

- In Development to Address Two of the Largest Unmet Needs in Dermatology
 - U.S. prevalence of ~6 million in molluscum contagiosum⁽¹⁾ and ~22 million in common warts⁽²⁾
 - No FDA-approved drugs to treat molluscum or warts
- □ June 23, 2021 PDUFA Goal Date for the Treatment of Molluscum
 - Achieved statistical significance for primary endpoints in two pivotal trials (P-value < 0.0001)
- Innovative Product Candidate
 - Proprietary drug-device combination of formulation and single-use applicator
- Physician Acceptance
 - 95% of Pediatric Dermatologists have used API⁽³⁾
- Payer Research Suggests Favorable Reimbursement Landscape
- On March 2, Torii Pharmaceutical Exercised Option Triggering 60-Day Period to Execute Exclusive License Agreement for Development and Commercialization of VP-102 in Japan

Dermatological Oncology

- U Worldwide rights for dermatological oncology, including basal cell and squamous cell carcinomas and non-metastatic melanoma, to LTX-315
 - First-in-class oncolytic peptide injected directly into tumor
- Desitive tumor-specific immune cell responses in multi-indication Phase 1/2 oncology trials
- Verrica to focus initially on development to treat basal cell and squamous cell carcinomas
- □ 5.4 million diagnoses annually in the U.S. of basal and squamous cell skin cancers⁽⁴⁾; patients typically treated with surgery
- Submission of U.S. IND anticipated during first half of 2021

Proven Team

- Industry-leading, experienced management team with extensive dermatology product launch experience
- August 2020

⁽¹⁾ Prevalence in the US of 5.1% to 11.5% in children aged 0-16 years. (Fam Pract. 2014 Apr;31(2):130-6). US Census estimates ~69.4MM children aged 0 to 16 years in 2016. Molluscum Clinical Evidence

Cantharidin Elicits a Dual Response in the Skin

$\langle 1$

Superficial blistering of lesional skin

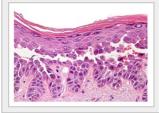

Cantharidin is a vesicant, causing the pharmacodynamic response of blistering in the skin.

Once applied, cantharidin activates neutral serine proteases that cause degeneration of the desmosomal plaque and intraepidermal blistering.⁽¹⁾

$\langle 2 \rangle$

Elicits Inflammation & Immune Response

Cantharidin stimulates leukocyte infiltration (e.g., neutrophils, macrophages, B and T cells and eosinophils) and the release of chemokines and cytokines including TNF-a, IL-8 and CXCL-5.⁽²⁾

Desmosome Cleavage and Blister Formation

J Invest Dermatol. 1962 Jul;39:39-45.

Significant Clinical Progress of YCANTH[™] (VP-102) for the Treatment of Molluscum

	TRIAL AND STATUS	FORMULATION / APPLICATION METHOD	TRIAL DESIGN	TRIAL OBJECTIVES
PHASE 3	Pivotal Trial CAMP-1 Complete	VP-102	 N=266 Conducted under SPA Randomized, double blind, multi- center, placebo controlled 	 To evaluate the efficacy of dermal application of VP-102 relative to placebo for complete clearance at day 84 To assess the safety and tolerability of VP-102
Ŧ	Pivotal Trial CAMP-2 Complete	• R	 N=262 Randomized, double blind, multi- center, placebo controlled 	 To evaluate the efficacy of dermal application of VP-102 relative to placebo for complete clearance at day 84 To assess the safety and tolerability of VP-102
PHASE 2	Innovate Trial Complete	VP-102	 Open-label, single-center N=33	 To determine possible systemic exposure from a single 24-hour application of VP-102 To confirm safety and efficacy with applicator
	Pilot Trial Complete	Our proprietary formula of cantharidin used in VP-102, applied with the wooden stick part of a cotton-tipped swab	 Open-label, single-center N=30	 To evaluate safety and efficacy and determine optimal treatment duration

Demographics in Phase 3 Trials¹

	VP-102 (n=310)	Vehicle (n=218)
Age (years)		
Mean (SD)	7.5 ± 6.7	6.8 ± 5.8
Median	6.0	6.0
Range	2-60	2-54
Age Group - no.(%)		
≥ 2 to 5 yr	137 (44.2)	106 (48.6)
≥6 to 11 yr	140 (45.2)	89 (40.8)
≥12-18 yr	22 (7.1)	18 (8.3)
≥ 19 yr	11 (3.5)	5 (2.3)
Gender – no. (%)		
Female	154 (49.7)	107 (49.1)
Male	156 (50.3)	111 (50.9)
Race or Ethnic Group – no. (%)		
White	277 (89.4)	202 (92.7)
Black or African American	13 (4.2)	8 (3.7)
Asian	6 (1.9)	1 (0.5)
American Indian/Alaskan Native	0	1 (0.5)
Other	14 (4.5)	6 (2.8)

YCANTH[™] (VP-102) Designed to be Clinician-Administered and Intend to Distribute Through Specialty Product Channels, if Approved

Note: For illustrative purposes only. If approved, actual distribution channels and support services may change as strategy is finalized.

Distribution model will be supported by a patient and HCP services platform (HUB)

- Benefits investigation/verification to determine coverage
- Full reimbursement support for miscellaneous J-code under medical benefit⁽¹⁾
- Prior authorization support
- Co-pay/co-insurance assistance

Dedicated field reimbursement team to support physician offices

(1) Verrica intends to file for a product-specific J-code for VP-102

Historical Compounded Cantharidin Presents a Number of Limitations

Varying concentration

- Evaporation of volatile solvents leads to concentration increases
- Patients can receive more drug than clinically necessary resulting in excessive blistering

Inconvenient and variable administration

- Application with the wooden stick part of a cotton-tipped swab can lead to patients receiving more drug than necessary
- Inability for physicians to identify where the drug has been applied

Inconsistent purity and lack of controlled product manufacturing

 Risk of impurities present such as residual solvents and pesticides

5 Limited availability

• Illegal to import formulated cantharidin

(3) Lack of

reimbursement

• Not FDA approved

eligible for drug

reimbursement

and therefore not

- Generally not available in hospitals and academic settings, which require FDA approved product
- Only an estimated 7% of 503B compounders produce formulations containing cantharidin⁽¹⁾

(1) Based on 57 503B facilities and 4 compounders of cantharidin per FDA database (January – June 2019).
