<sup>(1)</sup> Ton miles indicate fleet productivity by measuring the distance (in miles) a loaded inland tank barge is moved. Example: A typical 30,000 barrel inland tank barge loaded with 3,300 tons of liquid cargo is moved 100 miles, thus generating 330,000 ton miles.

<sup>(2)</sup> Inland marine transportation revenues divided by ton miles. Example: First quarter 2024 inland marine revenues of \$386.0 million divided by 3,304 million ton miles = 11.7 cents.

<sup>(3)</sup> Towboats operated, is the average number of owned and chartered inland towboats operated during the period.

<sup>(4)</sup> Delay days measures the lost time incurred by an inland tow (inland towboat and one or more inland tank barges) during transit. The measure includes transit delays caused by weather, lock congestion and other navigational factors.
