

HECLA MINING COMPANY

United States' Largest
Silver Producer

B. Riley Annual Institutional Investor Conference
May 2022

RESPONSIBLE. SAFE. INNOVATIVE.

CAUTIONARY STATEMENTS

Cautionary Statement Regarding Forward Looking Statements

This presentation contains “forward-looking statements” within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbor created by such sections and other applicable laws, including Canadian securities laws. When a forward-looking statement expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, such statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by the forward-looking statements. Forward-looking statements often address our expected future business and financial performance and financial condition and often contain words such as “anticipate,” “intend,” “plan,” “will,” “could,” “would,” “estimate,” “should,” “expect,” “believe,” “project,” “target,” “indicative,” “preliminary,” “potential” and similar expressions. Forward-looking statements in this presentation may include, without limitation: (i) Company will be able to mitigate inflationary effects on costs successfully, (ii) Lucky Friday production will exceed 1 million ounce sin the next three quarters, and; (ii) mine-specific and Company-wide 2022 estimates of future production, sales, costs of sales and cash cost and AISC per ounce (in each case after by-product credits), as well as Company-wide estimated spending on capital, exploration and pre-development for 2022. The material factors or assumptions used to develop such forward-looking statements or forward-looking information include that the prices assumed in the calculation of cash cost and AISC will occur and the Company’s plans for development and production will proceed as expected and will not require revision as a result of risks or uncertainties, whether known, unknown or unanticipated, to which the Company’s operations are subject.

Estimates or expectations of future events or results are based upon certain assumptions, which may prove to be incorrect, which could cause actual results to differ from forward-looking statements. Such assumptions, include, but are not limited to: (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of the Company’s projects being consistent with current expectations and mine plans; (iii) political/regulatory developments in any jurisdiction in which the Company operates being consistent with its current expectations; (iv) the exchange rate for the USD/CAD and USD/MXN, being approximately consistent with current levels; (v) certain price assumptions for gold, silver, lead and zinc; (vi) prices for key supplies being approximately consistent with current levels; (vii) the accuracy of our current mineral reserve and mineral resource estimates; (viii) there being no significant changes to Company plans for 2022 and beyond due to COVID-19 or any other public health issue, including, but not limited to with respect to availability of employees, vendors and equipment; (ix) the Company’s plans for development and production will proceed as expected and will not require revision as a result of risks or uncertainties, whether known, unknown or unanticipated; (x) counterparties performing their obligations under hedging instruments and put option contracts; (xi) sufficient workforce is available and trained to perform assigned tasks; (xii) weather patterns and rain/snowfall within normal seasonal ranges so as not to impact operations; (xiii) relations with interested parties, including Native Americans, remain productive; (xiv) maintaining availability of water rights; (xv) factors do not arise that reduce available cash balances; and (xvi) there being no material increases in our current requirements to post or maintain reclamation and performance bonds or collateral related thereto.

In addition, material risks that could cause actual results to differ from forward-looking statements include, but are not limited to: (i) gold, silver and other metals price volatility; (ii) operating risks; (iii) currency fluctuations; (iv) increased production costs and variances in ore grade or recovery rates from those assumed in mining plans; (v) community relations; (vi) conflict resolution and outcome of projects or oppositions; (vii) litigation, political, regulatory, labor and environmental risks; (viii) exploration risks and results, including that mineral resources are not mineral reserves, they do not have demonstrated economic viability and there is no certainty that they can be upgraded to mineral reserves through continued exploration; (ix) the failure of counterparties to perform their obligations under hedging instruments; (x) we take a material impairment charge on our Nevada operations; and (xi) we are unable to remain in compliance with all terms of the credit agreement in order to maintain continued access to the revolver. For a more detailed discussion of such risks and other factors, see the Company’s 2021 Form 10-K, filed on February 23, 2022, with the Securities and Exchange Commission (SEC), as well as the Company’s other SEC filings. The Company does not undertake any obligation to release publicly, revisions to any “forward-looking statement,” including, without limitation, outlook, to reflect events or circumstances after the date of this presentation, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. Investors should not assume that any lack of update to a previously issued “forward-looking statement” constitutes a reaffirmation of that statement. Continued reliance on “forward-looking statements” is at investors’ own risk.

CAUTIONARY STATEMENTS (cont'd)

Cautionary Note Regarding Reserves and Resources

This presentation uses the terms “mineral resources,” “measured mineral resources,” “indicated mineral resources” and “inferred mineral resources.” Mineral resources that are not mineral reserves do not have demonstrated economic viability. You should not assume that all or any part of measured or indicated mineral resources will ever be converted into mineral reserves. Further, inferred mineral resources have a great amount of uncertainty as to their existence and as to whether they can be mined legally or economically, and an inferred mineral resource may not be considered when assessing the economic viability of a mining project, and may not be converted to a mineral reserve. On October 31, 2018, the SEC adopted new mining disclosure rules (“S-K 1300”) that is more closely aligned with current industry and global regulatory practices and standards, including National Instrument 43-101 – Standards of Disclosure for Mineral Projects (“NI 43-101”) which we comply with because we also are a “reporting issuer” under Canadian securities laws. While S-K 1300 is more closely aligned with NI 43-101 than the prior SEC mining disclosure rules, there are some differences. NI 43-101 is a rule developed by the Canadian Securities Administrators, which established standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Unless otherwise indicated, all resource and reserve estimates contained in this presentation have been prepared in accordance with NI 43-101, as well as S-K 1300. Investors are urged to consider closely the disclosure in the Company’s Annual Report on Form 10-K for the year ended December 31, 2021 available at www.sec.gov.

Cautionary Statements to Investors on Reserves and Resources

This news release uses the terms “resource.” Mineral resources that are not mineral reserves do not have demonstrated economic viability. You should not assume that all or any part of measured or indicated mineral resources will ever be converted into mineral reserves. Further, inferred mineral resources have a great amount of uncertainty as to their existence and as to whether they can be mined legally or economically, and an inferred mineral resource may not be considered when assessing the economic viability of a mining project, and may not be converted to a mineral reserve. On October 31, 2018, the SEC adopted new mining disclosure rules (“S-K 1300”) that is more closely aligned with current industry and global regulatory practices and standards, including National Instrument 43-101 – Standards of Disclosure for Mineral Projects (“NI 43-101”) which we comply with because we also are a “reporting issuer” under Canadian securities laws. While S-K 1300 is more closely aligned with NI 43-101 than the prior SEC mining disclosure rules, there are some differences. NI 43-101 is a rule developed by the Canadian Securities Administrators, which established standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Unless otherwise indicated, all resource and reserve estimates contained in this press release have been prepared in accordance with NI 43-101, as well as S-K 1300.

Qualified Person (QP)

Kurt D. Allen, MSc., CPG, VP - Exploration of Hecla Mining Company and Keith Blair, MSc., CPG, Chief Geologist of Hecla Limited, who serve as a Qualified Person under S-K 1300 and NI 43-101, supervised the preparation of the scientific and technical information concerning Hecla’s mineral projects in this news release. Technical Report Summaries (each a “TRS”) for each of the Company’s material properties are filed as exhibits 96.1, 96.2 and 96.3 to the Company’s Annual Report on Form 10-K for the year ended December 31, 2021, and are available at www.sec.gov. Information regarding data verification, surveys and investigations, quality assurance program and quality control measures and a summary of analytical or testing procedures for the Greens Creek Mine are contained in its TRS and in a NI 43-101 technical report titled “Technical Report for the Greens Creek Mine” effective date December 31, 2018, and for the Lucky Friday Mine are contained in its TRS and in its technical report titled “Technical Report for the Lucky Friday Mine Shoshone County, Idaho, USA” effective date April 2, 2014, for Casa Berardi are contained in its TRS and in its technical report titled “Technical Report on the mineral resource and mineral reserve estimate for Casa Berardi Mine, Northwestern Quebec, Canada” effective date December 31, 2018 (the “Casa Berardi Technical Report”), and for the San Sebastian Mine, Mexico, are contained in a technical report prepared for Hecla titled “Technical Report for the San Sebastian Ag-Au Property, Durango, Mexico” effective date September 8, 2015. Also included in each TRS and the four technical reports is a description of the key assumptions, parameters and methods used to estimate mineral reserves and resources and a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant factors. Information regarding data verification, surveys and investigations, quality assurance program and quality control measures and a summary of sample, analytical or testing procedures for the Fire Creek Mine are contained in a technical report prepared for Klondex Mines, dated March 31, 2018; the Hollister Mine dated May 31, 2017, amended August 9, 2017; and the Midas Mine dated August 31, 2014, amended April 2, 2015. Copies of these technical reports are available under Hecla’s and Klondex’s profiles on SEDAR at www.sedar.com. Mr. Allen and Mr. Blair reviewed and verified information regarding drill sampling, data verification of all digitally collected data, drill surveys and specific gravity determinations relating to all the mines. The review encompassed quality assurance programs and quality control measures including analytical or testing practice, chain-of-custody procedures, sample storage procedures and included independent sample collection and analysis. This review found the information and procedures meet industry standards and are adequate for Mineral Resource and Mineral Reserve estimation and mine planning purposes.

Cautionary Note Regarding Non-GAAP measures

Cash cost per ounce of silver and gold, after by-product credits, EBITDA, adjusted EBITDA, All-in Sustaining Costs, after by-product credits, realized silver margin, and free cash flow represent non-U.S. Generally Accepted Accounting Principles (GAAP) measurements. A reconciliation of these non-GAAP measures to the most comparable GAAP measurements can be found in the Appendix.

130 YEARS OF TIME-TESTED SUCCESS

High-grade, low-cost silver mines: Foundations of a solid present and a strong future

Low Risk Operating Portfolio

- Mining in the best countries, states, and provinces*
- Prior capital investments allow for low future capital needs
- Lucky Friday's new mining method in production, currently being optimized

Best in Class Silver Assets

- Highest grade, lowest cost with reserve mine lives 14+ years
- Silver Q1'22 AISC of \$7.64⁽⁴⁾ best among silver miners
- Zinc and lead by-product revenues help offset inflationary pressures

Strong Operational & Financial Quarter

- Silver assets continue strong operational performance
- Solid balance sheet built on cash flow generation
- 8th consecutive quarter of free cash flows
- 21% of Q1 free cash flow returned to shareholders

* Source – Fraser Institute Annual Survey of Mining Companies 2021

HECLA MINES 40% OF ALL SILVER PRODUCED IN THE USA

Half of the world's production is from Mexico, Peru and China; U.S. production is scarce

2021 U.S. Silver Production
(Moz)

Hecla's Share of U.S. Production*

3 Countries Produce ~50% of World Production
U.S. Produces 4%*

LOW-COST PROFILE SILVER ASSETS

Greens Creek in the best 20th percentile, Lucky Friday expected to be in best 30th percentile of primary silver mines in 2022

- Greens Creek's low-cost structure reflected by its position in the best 20th percentile of AISC of primary silver mines
- Expected production increases at Lucky Friday to improve its position to the best 30th percentile in 2022

FINANCIAL STRENGTH AND FLEXIBILITY

Q1 '22: Solid operational performance delivers free cash flows and strong balance sheet

- Revenues of \$186.5 million, +1% over prior quarter
- Consistent capital spend, averaging \$114 million from 2019 to 2022**
- Cash flow from operations \$37.9 million, free cash flow of \$16.4 million ⁽²⁾, after \$18.5 million in interest payments
- Cash and equivalents of \$212 million, liquidity of \$445 million*
- Ratings upgrades from Moody's to B1 and S&P to B+

Q1 Revenues By Metal

■ Silver ■ Gold ■ Lead ■ Zinc

Net Debt, Net Debt/Adjusted EBITDA⁽¹⁾

(\$ millions, ratio)

Cash & Liquidity

(\$ millions)

COST INFLATION TIED TO LABOR AND MATERIALS

Higher lead and zinc by-product credits offset inflationary pressure

Changes in key inputs: Q1/2022 vs. Q1/2021

		% Increase
Diesel*	\$/gallon	+56%
Ground Support*	\$/ton	+41%
Cyanide*	\$/lb.	+24%
Labor**	\$ mm	+14%
Contractors**	\$ mm	+45%
By Product Credits - Lead and Zinc	\$ mm	+23%

Q1/2022: Labor Costs as % of Total Production Costs**

LEADING DIVIDEND POLICY

More cash returned to shareholders as dividend yield increases synchronously with silver prices

Industry's only silver-linked dividend policy pays an annual normal dividend (15 cents per share) plus a silver price-linked dividend that starts at \$20/oz silver price.

* Assumes 13 million ounces of silver production

** Dividend yield as a basis of silver price calculated as: Dividend Paid per ounce of silver/Silver Price (Average of the range, for example: \$27.50/oz used for \$25-\$30/oz range)

GREENS CREEK: SOLID FIRST QUARTER

Stable operating and capital costs, along with high grades drive free cash flow generation

- Generated \$2.6 billion in cash flow from operations and \$1.7 billion in free cash flow since 1987
 - \$185 million in free cash flow in 2021
- Reserve life of 14 years, *had a reserve mine life of 7 years at startup – 35 years ago*

First Quarter Performance and Guidance

		Q1 2022	2022 Guidance
Silver Production	Moz	2.4	8.6 - 8.9
Total Cost of Sales	\$ mm	\$49.6	\$230
Capital Additions	\$ mm	\$3.1	*
Cash Costs ⁽⁵⁾	\$/Ag oz	(\$0.90)	\$0.75 - \$2.50
AISC ⁽⁴⁾	\$/Ag oz	\$1.90	\$6.50 - \$8.50

NYSE: HL

* 2022 Capital guidance by mine not provided

Free Cash Flow ⁽²⁾

Generated \$238 million in Free Cash Flow since Q1/2021

RESPONSIBLE. SAFE. INNOVATIVE. | 10

LUCKY FRIDAY: ON TRACK TO BE 5 Moz/YR PRODUCER

Production expected to exceed 1 million ounces for the next three quarters

- 6th quarter of positive free cash flow generation
- 5 million ounces/year average is 2x the best average production rate of the last 80 years
- Underhand Closed Bench (UCB) mining method – another cornerstone of Hecla's innovation

First Quarter Performance and Guidance

		Q1 2022	2022 Guidance
Silver Production	Moz	0.89	4.3 – 4.6
Total Cost of Sales	\$ mm	\$29.3	\$115.0
Capital Expenditures	\$ mm	\$9.7	*
Cash Costs ⁽⁵⁾	\$/Ag oz	\$6.57	\$0.75 - \$2.00
AISC ⁽⁴⁾	\$/Ag oz	\$13.15	\$7.25 - \$9.25

NYSE: HL

NYSE: HL * 2022 Capital guidance by mine not provided

Free Cash Flow ⁽²⁾

Generated \$37 million in Free Cash Flow since Q1/2021

RESPONSIBLE. SAFE. INNOVATIVE. | 13

A VERY SHORT HISTORY ON SILVER DEMAND

Despite declining photography demand, industrial and investment demand in a secular bull market since 2000, even stronger in 2021 and the future

Five distinct periods of silver demand, three that are strengthening

- Monetary by governments (2000 BC to 1800 AD)
- Photographic (1900 to 1999)
- **Industrial (1940 -)**
- **Investment (2000 -)**
- **Energy (2010 -)**

22 YEAR CHANGE IN DEMAND

Million Ounces

	1999	2021	% Increase
Industrial	343	508	48%
Photography	246	29	-88%
Jewelery/Silverware	260	224	-14%
Investment	26	344	1,323%
Total	875	1,105	27%

If the decrease in photographic demand is removed, silver demand increases 447 million ounces or 71%

SOLAR PROJECTED FOR THE LARGEST GROWTH

Silver is a key component of solar panels

- In the U.S., renewable energy projected to double from 21% in 2020 to 42% by 2050
- Solar energy generation as a percentage of renewable energy forecast to increase 3x by 2050 from 16% to 47%
- Silver paste used in photovoltaics (PVs) which are building blocks of solar panels
- 2021 silver demand in PVs is 127 Moz, **a 4.5% CAGR over 5 years**

U.S. Electricity Generation*

SILVER – WIDENING GAP BETWEEN SUPPLY & DEMAND

Hecla is poised as a leader on U.S. mineral production

The Opportunity

- Pandemic and Ukraine war have highlighted our supply chain vulnerability
- US Senate leaders see mineral production as fundamental to national and energy security
- President Biden has invoked the Domestic Production Act for minerals needed for batteries

The Risk

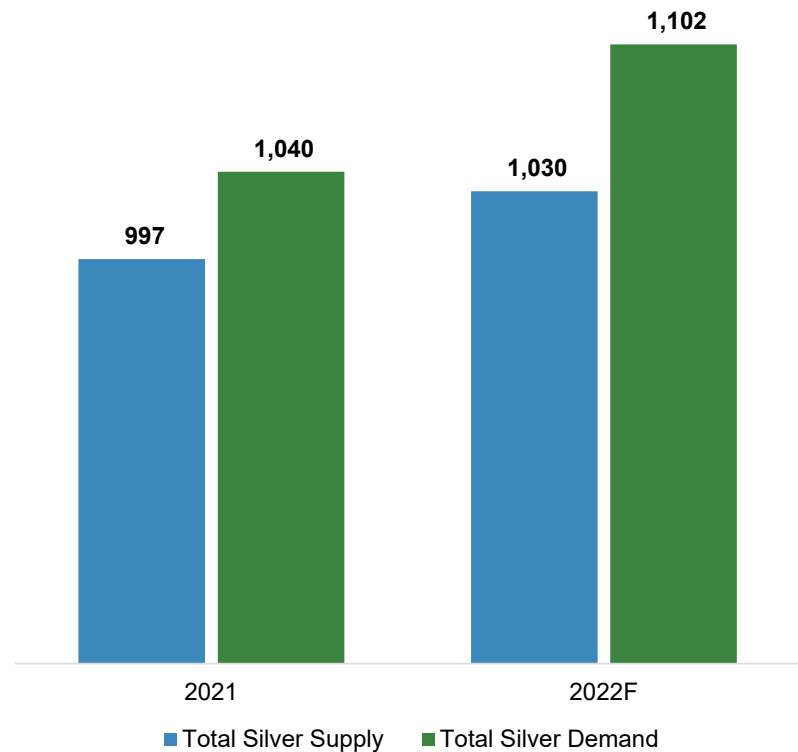

- Legislation to change the mining law
- Environmental laws are not streamlined

Hecla's Advantage

- **Largest U.S. silver producer** with 40% share, **3rd largest producer of zinc**, a federally designated critical mineral
- 130 years of experience in producing critical and essential minerals in the United States
- A development project that is the **3rd largest undeveloped U.S. copper deposit** with 300 million ounces of silver

Silver Supply and Demand*

(Million Ounces)

WHY INVEST IN HECLA?

The largest U.S. silver producer with the largest U.S. reserve base from high margin best in class silver assets

We mine:

The Right Metals

- Silver, metal for renewable energy
- Zinc, strategic metal, 3rd largest U.S. producer
- Copper, 3rd largest undeveloped project

In the Right Jurisdictions

- Mines in Alaska, Quebec, Idaho
- Exploration in Nevada, Quebec, Colorado and Montana

With the Right Mines

- U.S. largest reserves with 14+ years in reserve lives
- Highest reserve grades, lowest cost
- Low capital, high innovation producing growth, returns, and value

Appendix

Guidance

GUIDANCE: GROWING SILVER & GOLD PRODUCTION

High silver margins projected despite COVID-19 and inflation costs

<u>Consolidated Production Outlook*</u>	Silver Production (Moz)	Gold Production (Koz)	Silver Equivalent (Moz) ⁸	Gold Equivalent (Koz) ⁸
2022 Total	12.9 – 13.5	165 - 175	39.3 – 40.7	509 – 527
2023 Total	13.5 – 14.5	175 - 185	40.7 – 42.5	527 – 550
2024 Total	14.5 – 15.1	185 - 195	42.5 – 43.8	550 – 567

* Production and cost outlook by mine available in the appendix

<u>2022 Consolidated Cost Outlook*</u>	Costs of Sales and other direct production ("Cost of Sales") (million) ⁷	Cash cost, after by-product credits, per silver/gold ounce ⁵	AISC, after by-product credits, per produced silver/gold ounce ⁴
Total Silver	\$345	\$0.75 - \$2.50	\$9.75 - \$11.75
Total Gold	\$210	\$1,175- \$1,325	\$1,450 - \$1,600

* Production and cost outlook by mine available in the appendix

2022E Capital and Exploration Outlook

(in millions)	
Capital expenditures	\$135
Exploration & Pre-development expenditures	\$45

Financial

2021: RECORD REVENUES, 2nd HIGHEST SILVER RESERVES

Record Year

- Developed Underhand Closed Bench (UCB) mining method at Lucky Friday
- 2nd highest silver and gold reserves
- Record revenues, Adjusted EBITDA, 2nd highest cash flows from operations and free cash flow

ESG Focus

- Strong safety performance, All- Injury Frequency Rate of 1.45, 40% lower than U.S. average
- Net zero on scope 1 & 2 emissions

Financial Strength

- 2021 cash balance of \$210 million, total liquidity of \$443 million
- Leverage ratio of 1.1x, well below the target of 2.0x

2021 REVENUE, PRODUCTION AND COST HIGHLIGHTS

2021 Margins⁽³⁾
Silver Margin: **\$16.05/oz**
Gold Margin: **\$422/oz**

Silver Production: **12.9 Moz**
 Cost of Sales⁽³⁾: **\$314 M**
 Cash Costs, after by-product credits⁽⁵⁾: **\$1.37/oz**
 AISC, after by-product credits⁽⁴⁾: **\$9.19/oz**
 Realized Price: **\$25.24/oz**

 Cost of Sales: **\$278.8 M**
 Cash Costs, after by-product credits⁽⁵⁾: **\$1,127/oz**
 AISC, after by-product credits⁽⁴⁾: **\$1,374/oz**
 Realized Price: **\$1,796/oz**

Lead Production: **43 Ktons**
Realized Price: **\$1.03/lb**

Zinc Production: **63.6 Ktons**
Realized Price: **\$1.44/lb**

48% of Total Revenue

16% of Total Revenue

30% of Total Revenue

* Cash Costs after by-product credits, AISC after by-product credits and Margins are non-GAAP measures. Reconciliation to GAAP is provided in the appendix. Silver Margin for 2021 is calculated as Realized Silver Price of \$25.24/oz less AISC, after by-product credits of \$9.19/oz. Gold Margin for 2021 is calculated as Realized Gold Price of \$1,796/oz less AISC, after by-product credits of \$1,374/oz.

ROBUST FREE CASH FLOW GENERATION

Low-cost silver mines generate margins even at low silver prices

- High-grade, low-cost silver mines drive margins and free cash flow generation even at low silver prices
- 8th consecutive quarter of free cash flow generation, 2.8x increase in cash since Q2/2020

LOW-CAPITAL PROFILE

Impact from inflation is relatively low due to low tonnage, high-grade mines

- Increase in silver production at Lucky Friday not tied to any significant increase in capital
- Stable capital costs with no planned large construction projects

2019-2021
(\$ millions)

- Hecla has a \$869 million tax loss carryforward to reduce future U.S. taxable income
 - \$54 million in Canada
- U.S. tax incentives for U.S. mines
 - Depletion deductions
 - Research and development credits
 - Mine safety training credits
 - Accelerated depreciation

Silver Market

SILVER SUPPLY COMES FROM MINE PRODUCTION & RECYCLING

Mine production accounts for more than 80% of supply

- 2021 saw an increase in mined silver as COVID-19 disruptions from 2020 recovered

SILVER MINE SUPPLY DEPENDENT ON OTHER METALS

Over half of supply is a by-product of copper, lead and zinc mines

MINE SUPPLY EXPECTED TO INCREASE IN 2022

Increase is largely driven by higher output mines in Mexico

- U.S. production of silver expected to remain similar to 2021 levels

*Source: Metals Focus, World Silver Survey

SILVER DEMAND HAS THREE MAIN COMPONENTS

Green energy demand is new and growing – bolstered by photovoltaics and EVs

* Industrial demand includes photography demand Source: World Silver Survey 2021

Consumer Products/Industrial
Million oz

U.S. CURRENT ELECTRICITY CONSUMPTION TRENDS

Solar is projected to be the largest beneficiary, currently accounts for 1.3% of total U.S. energy consumption

U.S. primary energy consumption by energy source, 2020

total = 92.94 quadrillion
British thermal units (Btu)

total = 11.59 quadrillion Btu

Source: U.S. Energy Information Administration, *Monthly Energy Review*, Table 1.3 and 10.1, April 2021, preliminary data

Note: Sum of components may not equal 100% because of independent rounding.

U.S. energy consumption by source, 2020

	biomass <i>renewable</i> heating, electricity, transportation	4.9%
	hydropower <i>renewable</i> electricity	2.8%
	wind <i>renewable</i> electricity	3.2%
	solar <i>renewable</i> heating, electricity	1.3%
	geothermal <i>renewable</i> heating, electricity	0.2%
	petroleum <i>nonrenewable</i> transportation, manufacturing, electricity	34.7%
	natural gas <i>nonrenewable</i> heating, manufacturing, electricity, transportation	33.9%
	coal <i>nonrenewable</i> electricity, manufacturing	9.9%
	nuclear (from uranium) <i>nonrenewable</i> electricity	8.9%

A small amount of sources not included above are net electricity imports and coal coke.

The sum of individual percentages may not equal 100% because of independent rounding.

RESPONSIBLE. SAFE. INNOVATIVE. | 38

ESG

ESG: SMALL FOOTPRINT, LARGE BENEFIT

Environment, Community and Safety are three pillars of our ESG program

Safety

- Well-established safety culture
- Casa Berardi awarded the John T. Ryan Safety Award***
- **Safety of our people is foundational to running our business**

Small Environmental Footprint

- Net zero on emissions in 2021*
- **43.7% reduction in Scope 1&2 from 2019 baseline levels**
- In 2021, 99% of our electricity used at our mines was line power. Of that, 70% was generated from renewable hydropower
- **Global footprint <3,900 acres**
- In 2020, produced 470 AgEq oz./tonne of GHG emission vs. peers** at 200 AgEq oz./tonne
- **Low water use** of 63 gal. per ounce produced vs. an average person/day (100 gal.)

Large Community Benefit

- Support >2,300 families
- Typically, largest employer and taxpayer in areas we operate
- Provide community support through multiple programs
- **Hecla Charitable Foundation**
- Alaska Chamber's Large Business of the Year in 2021
- **2020 Economic footprint of \$550 million in wages, vendor payments and taxes**

Hecla is mining metals for a green energy future

- Silver and copper are the essential metals for a renewable energy future
- The U.S. imports 60% of silver and 30% of copper needs
- Hecla produces >40% of U.S. silver and is the largest U.S. silver producer with the largest U.S. silver reserve base
- Our Montana assets are the third largest undeveloped copper deposit in the world, host >2.5 billion pounds of copper and >300 million ounces of silver in inferred resources

NYSE: HL

* On scope 1 & 2 emissions, and through the purchase of carbon offset credits.

**Peers for comparison include Coeur Mining, Pan American Silver, First Majestic Silver and Newmont.

***John T. Ryan award is a CIM (Canadian Institute of Mining, Metallurgy, and Petroleum) award, lowest reportable injury frequency rate in the Quebec/Maritime region.

RESPONSIBLE. SAFE. INNOVATIVE. | 40

HECLA IS AMONG THE SAFEST OF MINING COMPANIES

Hecla's commitment and NMA CORESafety started in 2012, moved from underperformance to industry leader

- **Reduced AIFR by 24%**, the lowest in company history
- **Reduced AIFR by 76%** since 2012
- Hecla 1.45 rate in 2021 is **30% better** than national average

GREEN HOUSE GAS INTENSITY

Hecla's Scope 1 and 2 emissions are among the lowest in the industry

Hecla produced 168 silver ounces per tonne of GHG, 470 silver-equivalent ounces per tonne of GHG, or 6.9 gold equivalent ounces per tonne of GHG

SCOPE 1 AND 2 GHG EMISSIONS IN 2020 (in Thousands MtCO₂e)

best in peer group

ESG: ENVIRONMENTAL INTENSITY MEASURES 2020

HECLA PROVIDES OVERSIZED BENEFITS

Contributions to our world, country, communities and employees

- Metals America needs
 - Silver, copper, zinc, lead, gold
- Embrace families
 - Good paying jobs and “uncommon” benefits
 - Multi-generations work for the company
 - Active community partner
- Develop innovations
 - Dry-stack tailings
 - New technology that makes workers safe, more productive
- Support communities
 - Taxes, economic impact, social engagement
 - First Nations/Native Americans
 - Hecla Charitable Foundation
- Protect the environment

HECLA CHANGES LIVES

Largest employer with jobs and benefits that last a lifetime and an active participant in the local communities

- Direct economic impact of \$700 million in 2021
- More than a living wage – longevity, benefits
- Each Hecla job creates more jobs - 3,000+
- Support for communities during COVID-19:
 - Food, personal protective equipment, supplies, and financial assistance
 - “Hecla Bucks” for Hecla employees to use at local businesses
- Hecla Charitable Foundation has provided \$4+ million to area non-profits
- First Nation/Native Americans are key beneficiaries

INNOVATION THAT IMPROVES MINES AND SOCIETY

Led the way in dry-stack tailings development, tier IV engines improved air quality for all, and better, safer jobs

- Pioneered dry-stack tailings management at Greens Creek is industry “best practice” today
- Hecla established an internal tailings standard in 2014 and continues to improve our management systems
- Engines developed for underground mines have made air quality better for all
- Remote and automated machines put workers out of harms way and eliminate repetitive work

ENVIRONMENTAL STEWARDSHIP FROM BEGINNING TO END

Troy tailings reclamation considered “gold standard” in Montana

- Troy Tailings Storage Facility reclamation completed (300 acres). Nearly \$8 million in financial assurance released by the state
 - More than 200,000 shrubs and trees planted at Troy; land returned to productive wildlife habitat
 - Native plant collection and planting in partnership with Kootenai-Salish Tribes
 - Reclamation and biodiversity efforts can also help sequester carbon
- Backfilling the San Sebastian pits
- Closure of older Lucky Friday tailings dams

2017

2020

Operations/Exploration/Pre-development

OPERATIONAL REVIEW

DIVERSE ASSET PORTFOLIO IN MINING FRIENDLY JURISDICTIONS

Low cost, high margin, low tonnage assets in best jurisdictions

	Fundamental Operations		
	Greens Creek	Casa Berardi	Lucky Friday
			
Location/Fraser Ranking ¹	4 - Alaska, USA	6 - Quebec, Canada	7 - Idaho, USA
Primary Product	Silver	Gold	Silver

Mine Life at Start-up	7 years	6 years	2 years
Remaining Reserve Life	14 years	14 years	17 years
	Hecla's flagship mine: ~\$1bn in cumulative free cash flow over last 10 years	Doubled tonnage for economies of scale with open pit supplementing underground	Underhand Closed Bench mining method with high grades at depth sets the mine up as a flagship assets for the next two decades

¹ Location ranking based on Fraser Institute Annual Survey of Mining 2021 Report (84 companies ranked - Lower is Better).

³ Cost of sales and other direct production costs and depreciation, depletion and amortization.

⁴ Cash Costs and AISC, after by-product credits, per produced silver/gold ounce. AISC and FCF are non-GAAP measures; please refer to appendix for reconciliation to GAAP.

HIGH-GRADE SILVER MINES OF SIZE ARE SCARCE

Hecla owns the world's second and seventh largest silver mines which have the highest silver equivalent grade

*AgEq based on equivalency factors of 82 Au, 6 Cu, 20 Pb, 17 Zn
Source: S&P Global Market Intelligence, data as of December 31, 2020

RESERVES: INVESTING IN OUR FUTURE

2nd highest silver and gold reserves, mining depletion replaced by increased reserves

- Greens Creek silver reserves up +12%, second highest since 2002
- Company wide measured & indicated resources declined due to conversion to reserves
- Inferred resources increased 8% for silver, 2% for gold
- Reserve prices: Gold \$1,600/oz, Silver \$17/oz

HECLA'S 2022 EXPLORATION

19 drill rigs company wide focused on expanding and discovery of resources

Nevada

- Drilling ongoing at Midas
- Development of Hatter Graben drift and exploration drilling suspended due to high water inflows
- Drilling at Aurora later this year

Greens Creek

- Drilling to expand and upgrade multiple ore zones
- Surface drilling 4 target areas later this year

Casa Berardi

- Drilling to expand resources in the West, Principal, and East Mines
- Regional exploration Sonic drilling completed; results pending

San Sebastian

- Drill testing deeper levels of the La Roca district and multiple past producing veins

Creede

- Drilling North Bulldog target later this year

Republic

- Drill testing new targets later this year

CASA BERARDI DRILLING FOCUSED ON EXPANDING RESOURCES

Positive drilling results in the West, Principal, and East Mine areas

Positive Drilling Results

113 Zone

- Confirming Mineralization and new intersection north of the Casa Berardi fault

124 Zone

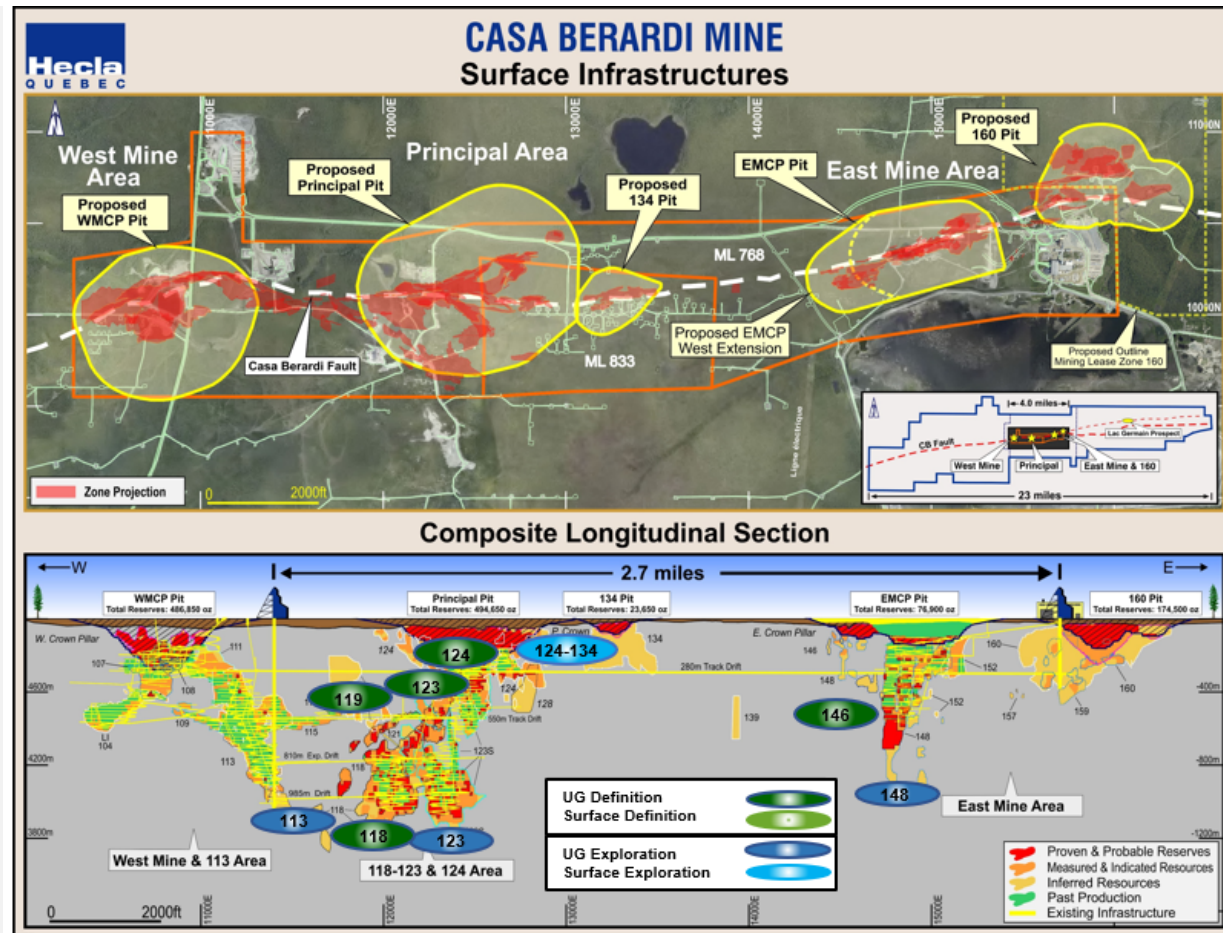

- Positive near surface assay results potentially expanding open pitable mineralization

134 Zone

- Expanding mineralization in 134-04 lens

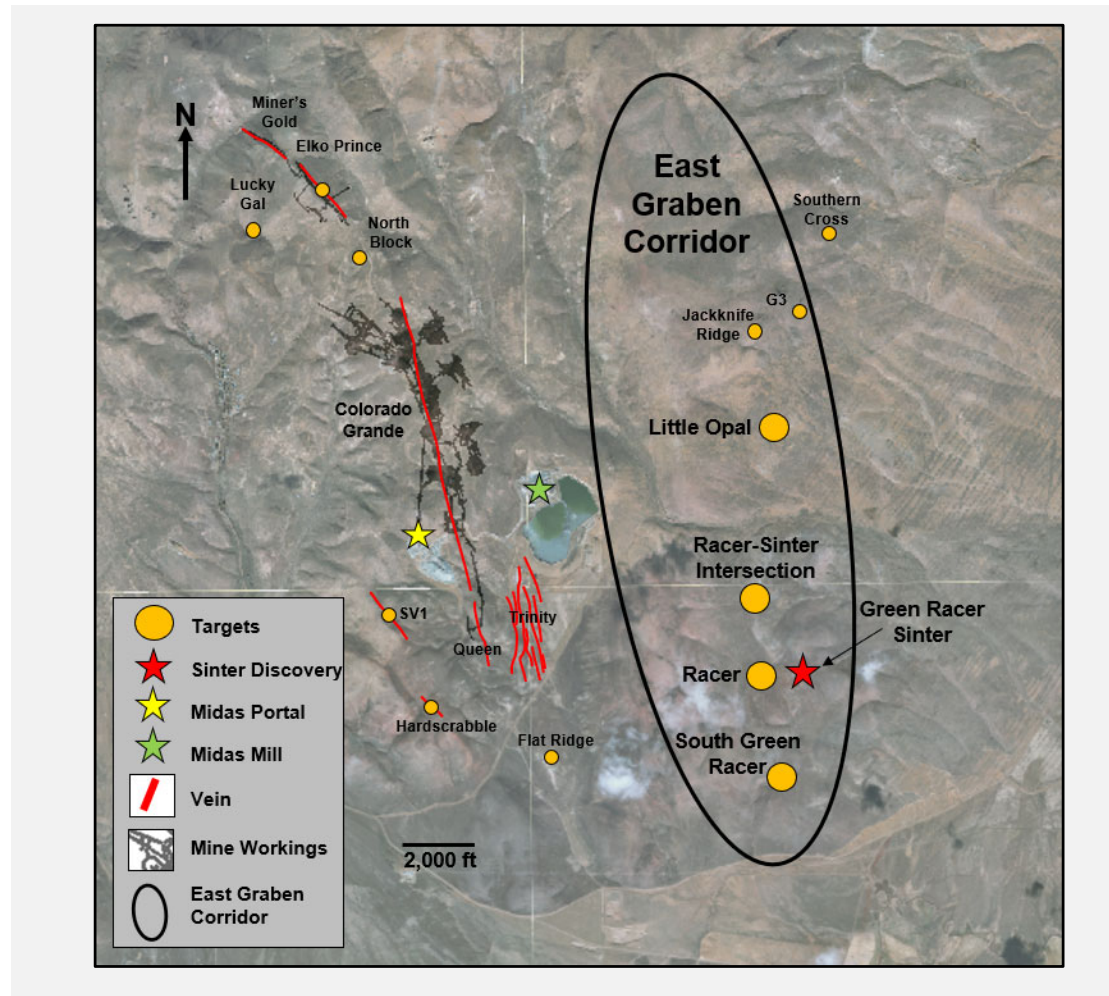

146 Zone

- Expanding resources extending mineralization to the west and down plunge

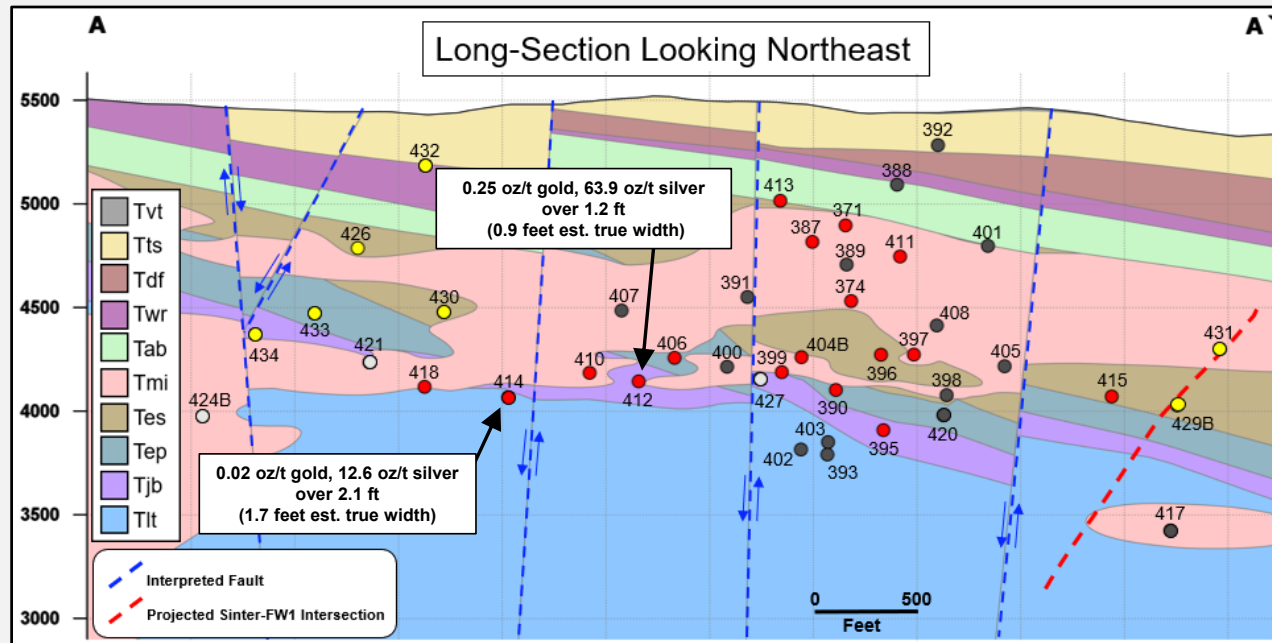

MIDAS - GREEN RACER SINTER DISCOVER LOCATION

2 core drills focused on expanding high-grade mineralization and drill testing additional targets

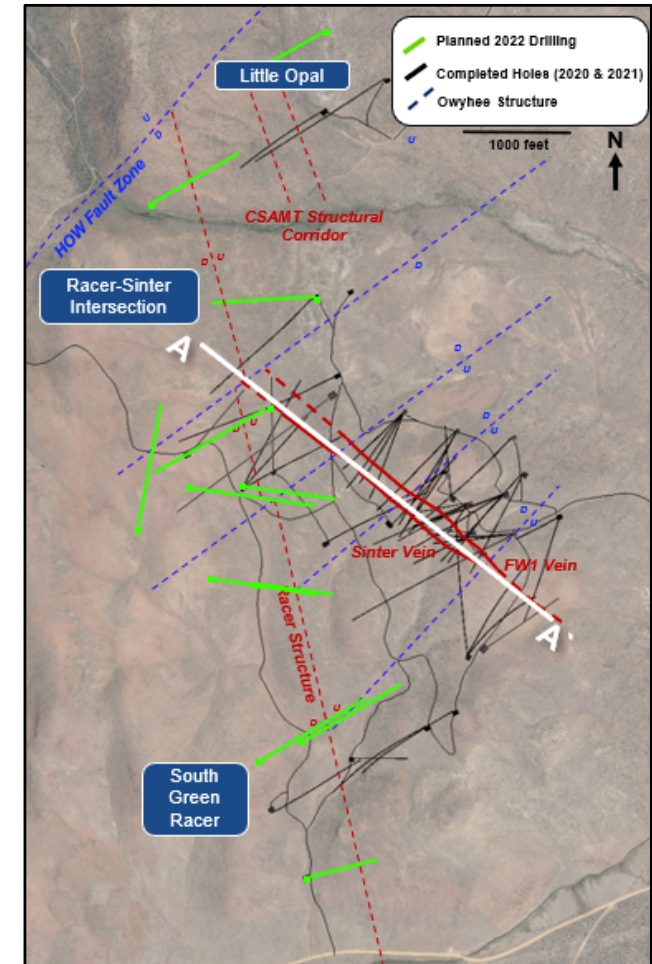

MIDAS - GREEN RACER SINTER LONGITUDINAL SECTION

2022 exploration drilling to test 1.7 miles of strike length on the Racer Structure

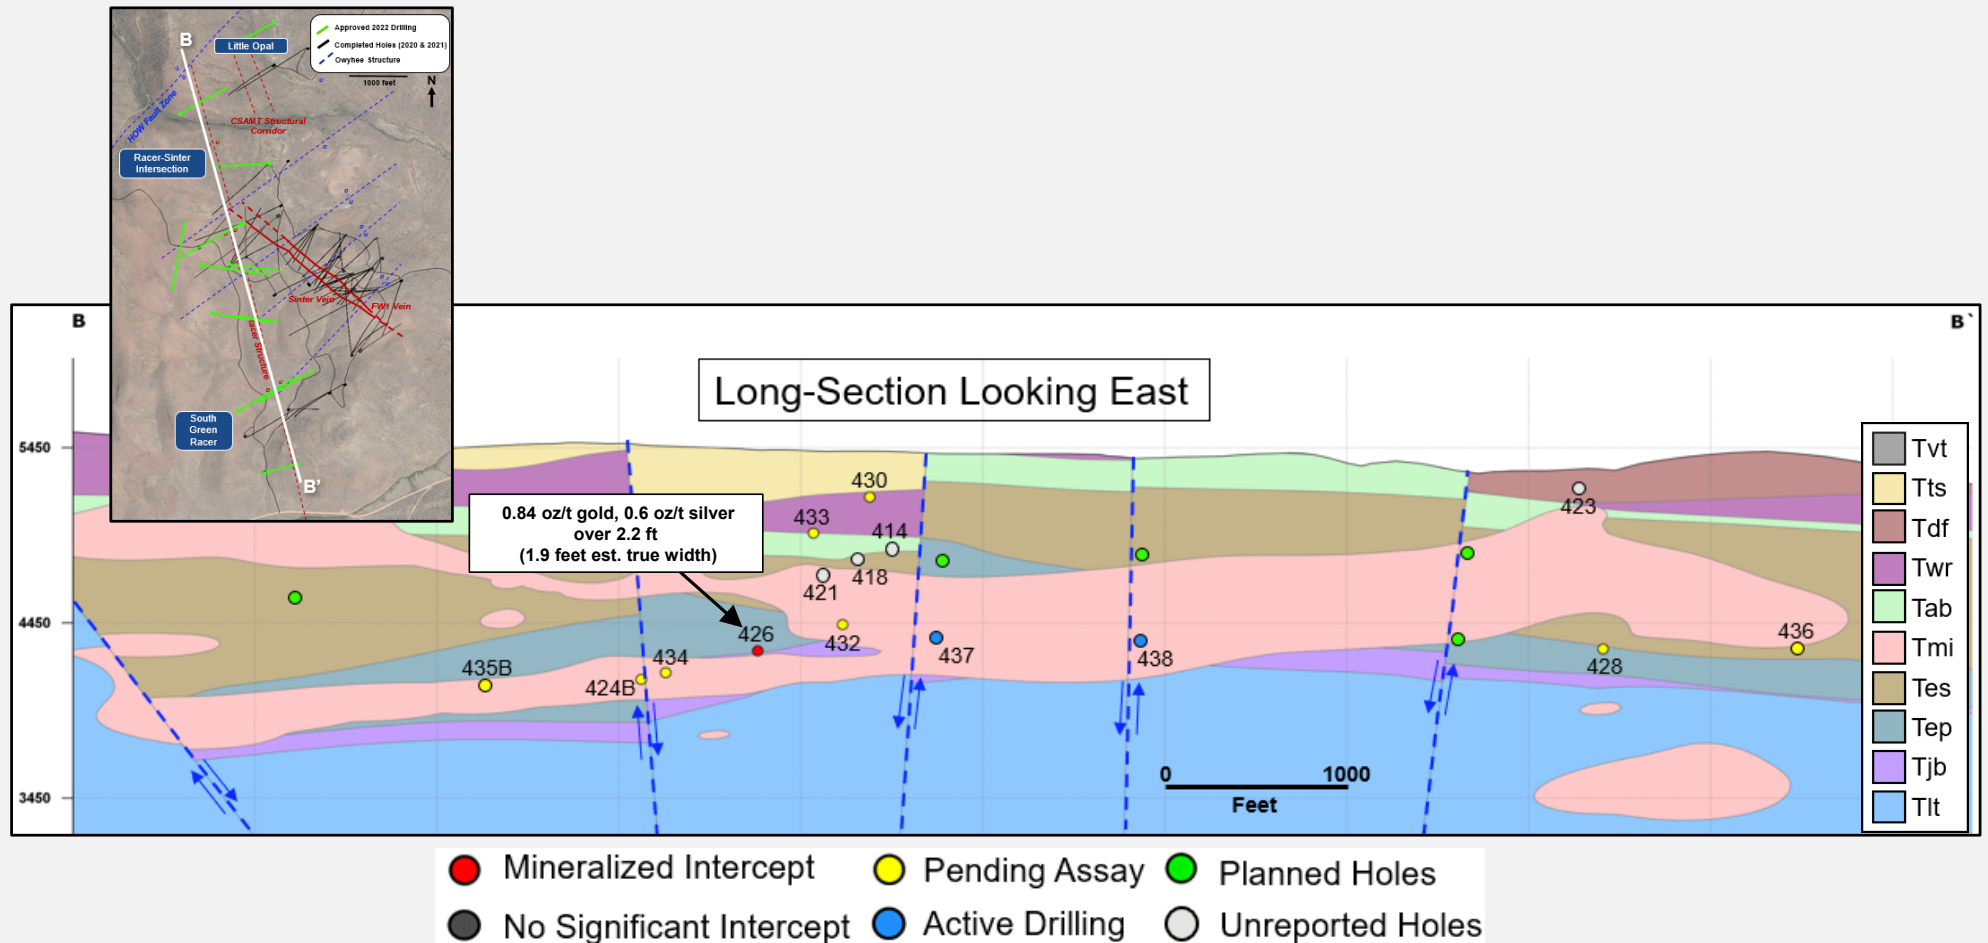

- Mineralized Intercept
- Pending Assay
- Unreported Holes
- No Significant Intercept
- Active Drilling

MIDAS - GREEN RACER SINTER LONGITUDINAL SECTION

2022 exploration drilling to test 1.7 miles of strike length on the Racer Structure

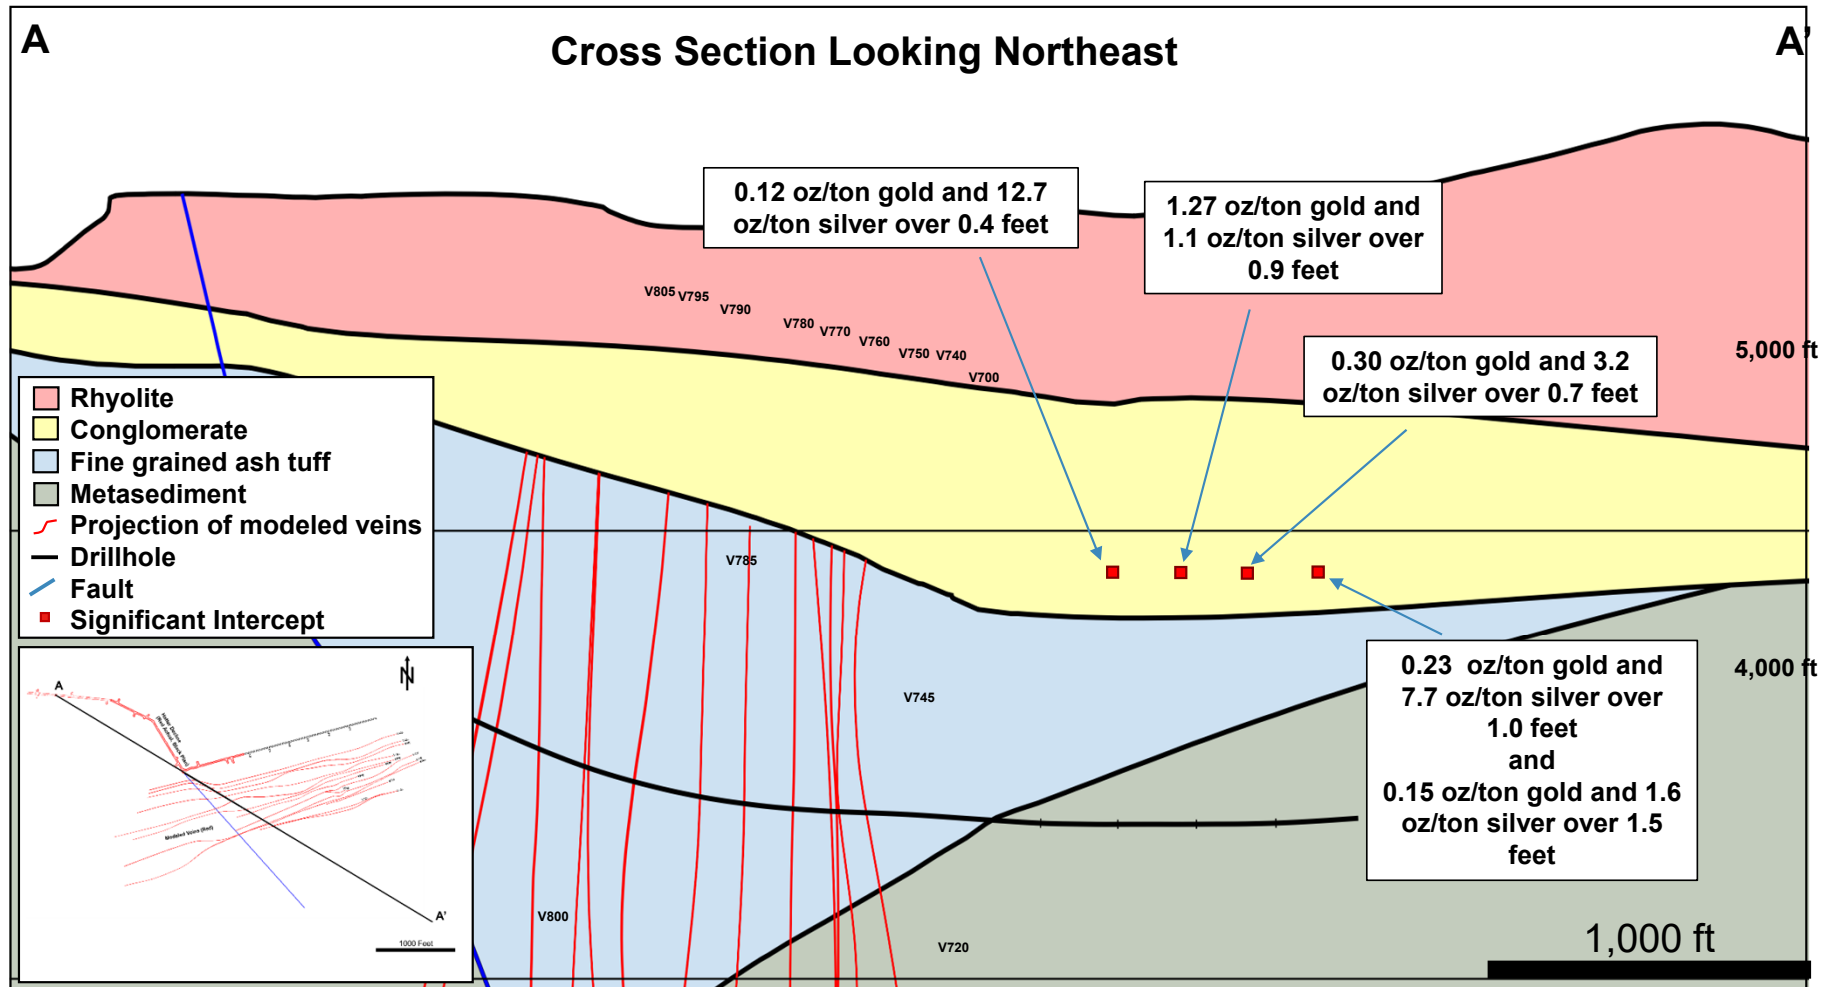

NV EXPLORATION - HOLLISTER UNDERGROUND EXPLORATION

Drift development and exploration drilling advancing

HOLLISTER – HATTER GRABEN DRILLHOLE HUC-111 SIGNIFICANT INTERCEPTS

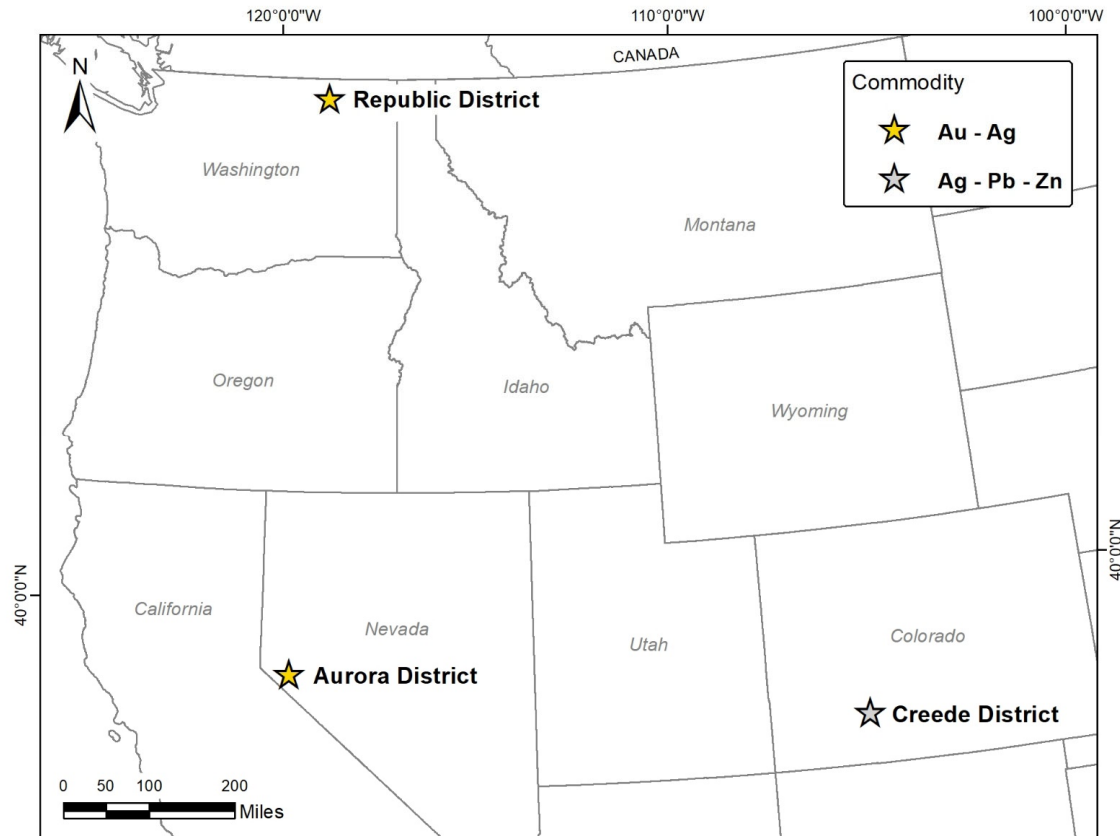

SAN SEBASTIAN - EXPLORING FOR LARGER ZONES OF MINERALIZATION

2022 drilling in progress at La Roca and San Sebastian Mine Middle Vein

AURORA, CREEDE, AND REPUBLIC - ADVANCING HISTORIC MINING DISTRICTS

2022 exploration drilling marks first drilling activities in many years

MONTANA ASSETS

Working to advance underground data collection and permitting

Permitting Strategy – Taking a reset

- Executing strategy to expedite authorization for underground evaluation and data collection via existing infrastructure.
 - Focus on permitting additional underground evaluation work on private land at existing Montanore site.
 - Proposed evaluation project has very low environmental impact.
- Common ownership of both ore bodies provides optionality not available to previous proponents.

Inferred Resources (at 12/31/21)

Rock Creek	Montanore
148.7 million oz. Silver	183 million oz. Silver
1.3 billion lbs. Copper	1.5 billion lbs. Copper

Combined, the projects are as large as Hecla's current reserves

Site Overview

Overview

Metric	Rock Creek	Montanore
Potential Mine Life	20 – 30 Years each	
Acquisition Cost	\$19 M	\$54 M
Well Located	50 miles from Lucky Friday	
Land Position	Great Exploration Potential	

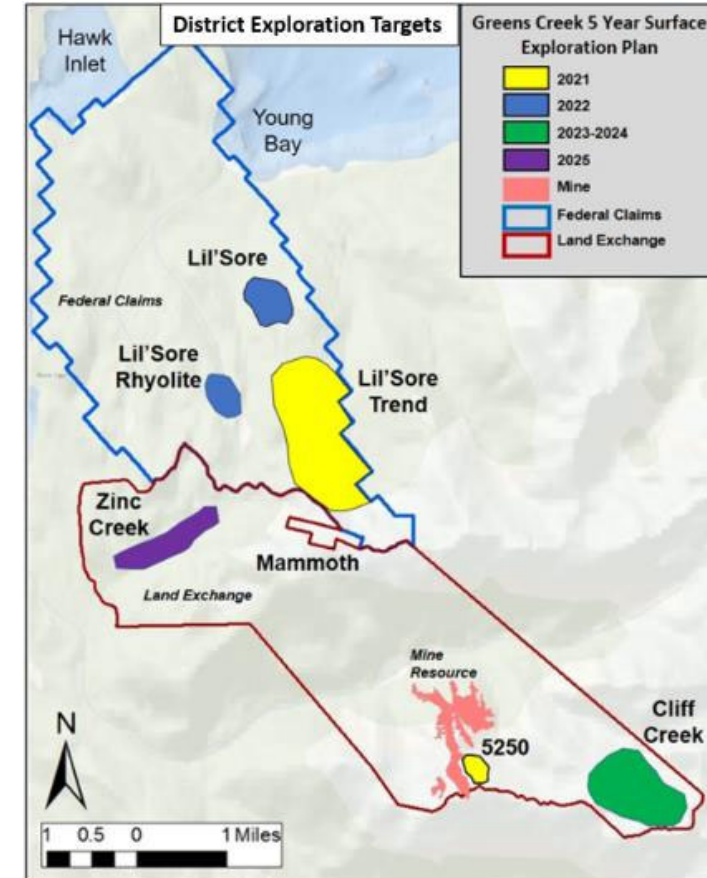

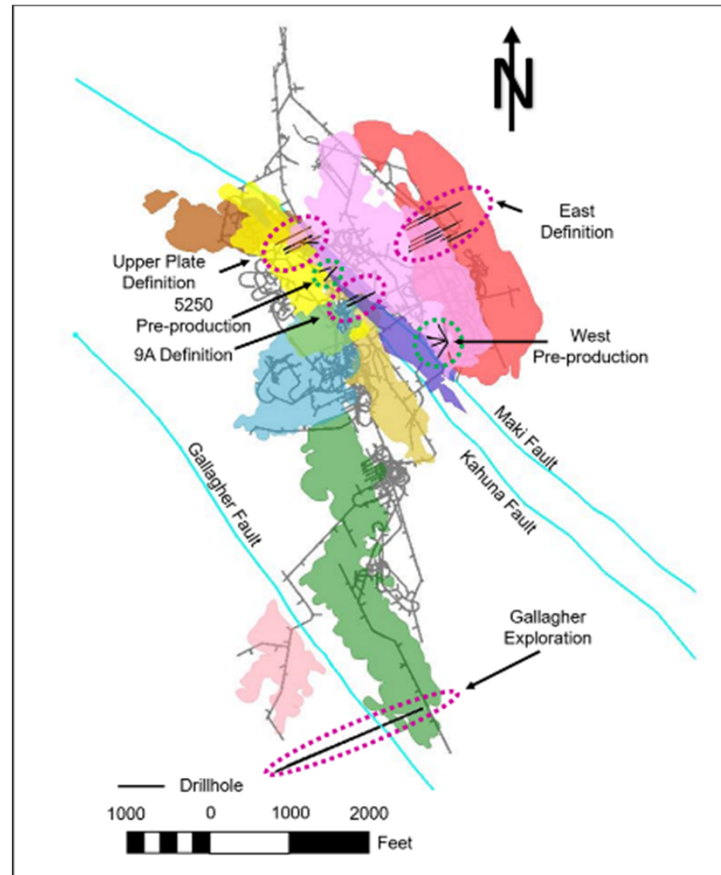

GREENS CREEK: OVER 30 YEARS AND STILL EXPLORING AND ADDING RESERVES

Upgrading Resources (Upper Plate, 9A, and East Ore), Exploring (Gallagher and Lil'Sore)

From 1989 to 2021, Greens Creek has mined more than 20 million tons containing:

- 330m ounces of silver
- 2.7m ounces of gold
- 4b pounds of zinc
- 1.5b pounds of lead

GREENS CREEK – DISTRICT AND NEAR MINE GROWTH POTENTIAL

In-mine mineralization open for expansion and district potential for new deposits

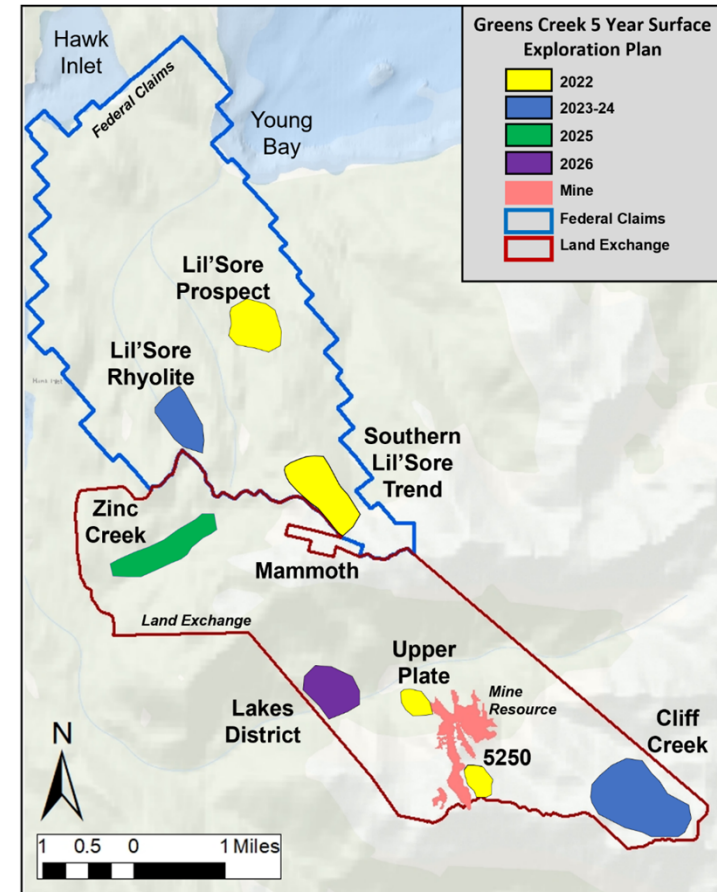

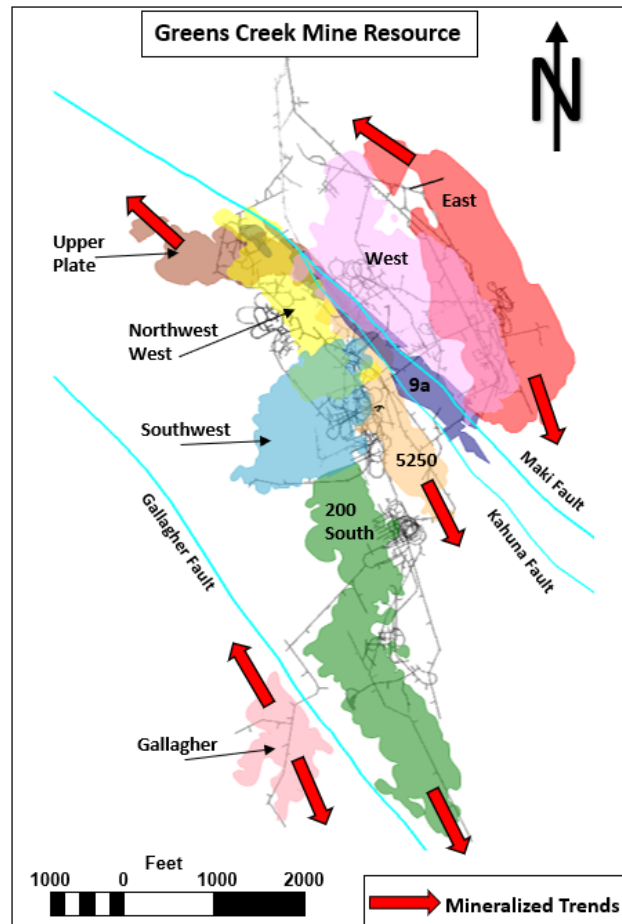

Continuation of resource expansion along mineralized trends

- Ore tons have doubled in the past 15 years
- Pace is driven by development access
- 5250 exploration is accessed from surface
- Multiple years of exploration planned

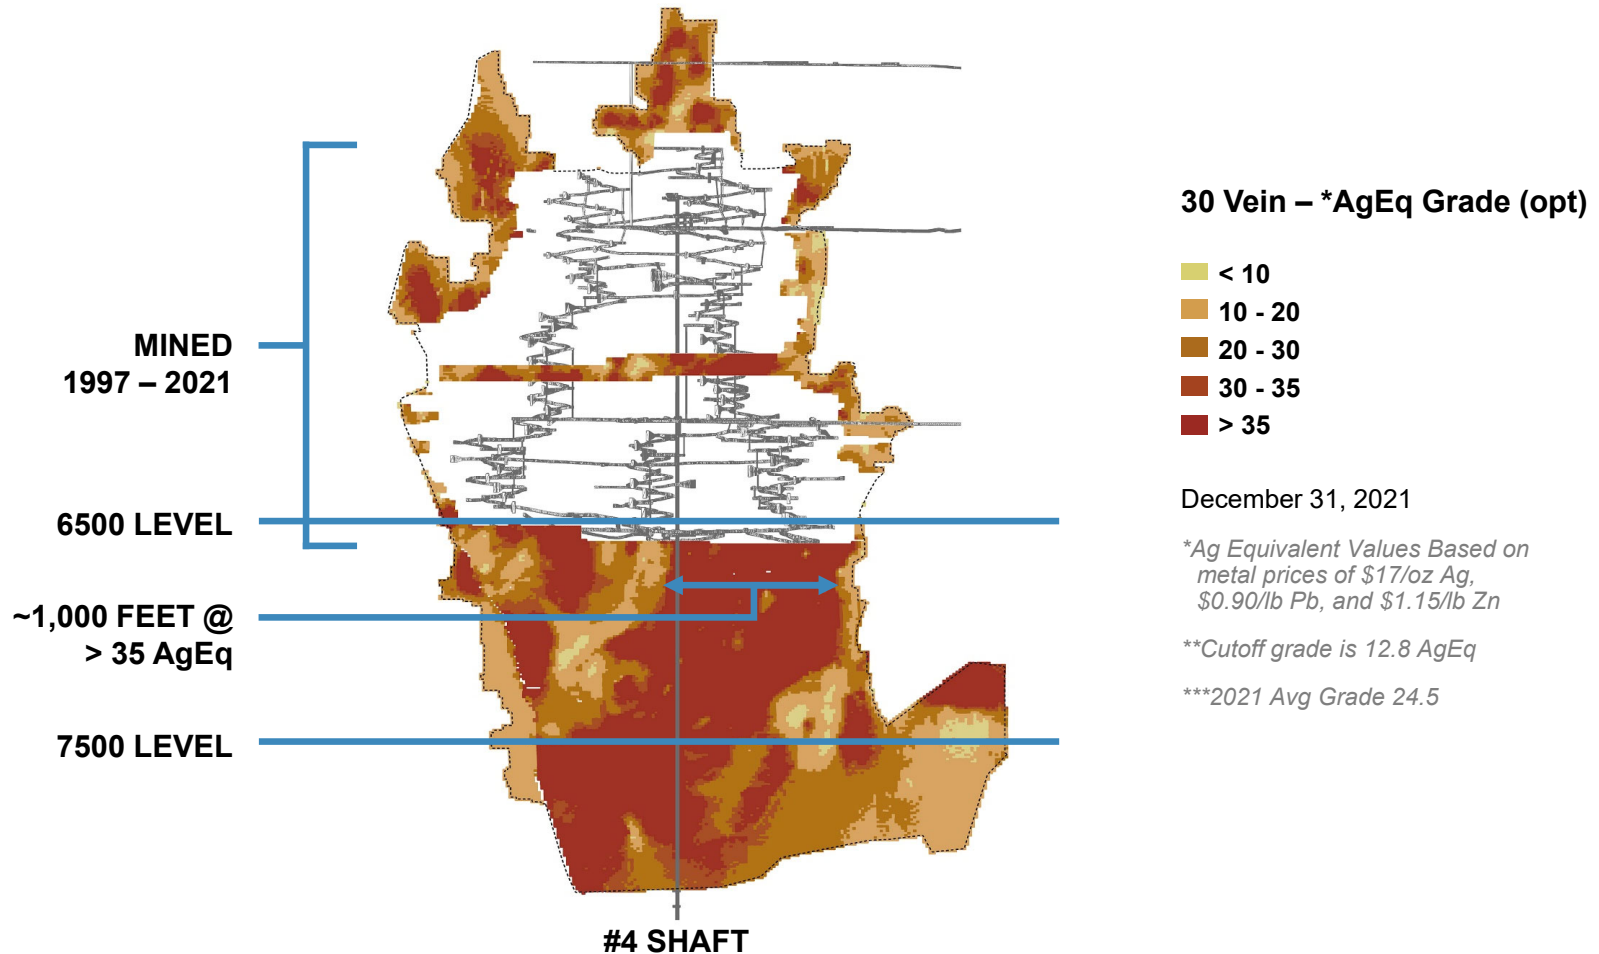

District targets have potential for a new deposit

- VMS deposits often are in clusters
- Multiple untested mineralized targets

LUCKY FRIDAY ON TRACK TO BE 5 Moz/YR YEAR PRODUCER

Higher grades at depth are supported by success of UCB mining method

ENDNOTES

1. Net debt to adjusted EBITDA is a non-GAAP measurement, a reconciliation of adjusted EBITDA and net debt to the closest GAAP measurements of net income (loss) and debt can be found in the appendix. It is an important measure for management to measure relative indebtedness and the ability to service the debt relative to its peers. It is calculated as total debt outstanding less total cash on hand divided by adjusted EBITDA.
2. Free cash flow is a non-GAAP measure and is calculated as cash flow from operations less additions to property, plant and equipment. Reconciliation to GAAP is shown in the appendix.
3. Realized silver margin is a non-GAAP measure and is calculated as realized market price of silver less AISC.
4. All-in sustaining cost (AISC), after by-product credits, is a non-GAAP measurement, a reconciliation of which to cost of sales and other direct production costs and depreciation, depletion and amortization, the closest GAAP measurement, can be found in the appendix. AISC, after by-product credits, includes cost of sales and other direct production costs, expenses for reclamation and exploration, and sustaining capital costs at the mine sites. AISC, after by-product credits, for our consolidated silver properties also includes corporate costs for all general and administrative expenses, exploration and sustaining capital which support the operating properties. AISC, after by-product credits, is calculated net of depreciation, depletion, and amortization and by-product credits. Current GAAP measures used in the mining industry, such as cost of goods sold, do not capture all the expenditures incurred to discover, develop and sustain silver and gold production. Management believes that all in sustaining costs is a non-GAAP measure that provides additional information to management, investors and analysts to help in the understanding of the economics of our operations and performance compared to other producers and in the investor's visibility by better defining the total costs associated with production. Similarly, the statistic is useful in identifying acquisition and investment opportunities as it provides a common tool for measuring the financial performance of other mines with varying geologic, metallurgical and operating characteristics. In addition, the Company may use it when formulating performance goals and targets under its incentive program.
5. Cash cost, after by-product credits, per silver and gold ounce represents a non-GAAP measurement, a reconciliation of which to cost of sales and other direct production costs and depreciation, depletion and amortization (sometimes referred to as "cost of sales" in this release), can be found in the Appendix. It is an important operating statistic that management utilizes to measure each mine's operating performance. It also allows the benchmarking of performance of each mine versus those of our competitors. As a primary U.S. silver mining company, management also uses the statistic on an aggregate basis - aggregating the Greens Creek, Lucky Friday and San Sebastian mines - to compare performance with that of other primary silver mining companies. With regard to Casa Berardi and Nevada Operations, management uses cash cost, after by-product credits, per gold ounce to compare its performance with other gold mines. Similarly, the statistic is useful in identifying acquisition and investment opportunities as it provides a common tool for measuring the financial performance of other mines with varying geologic, metallurgical and operating characteristics. In addition, the Company may use it when formulating performance goals and targets under its incentive program.
6. Silver and gold equivalent (include zinc and lead production) is calculated using the average market prices for the time period noted.
7. Cost of sales and other direct production costs and depreciation, depletion and amortization.
8. 2022E refers to Hecla's estimates for 2022. Calculations for 2022 include silver, gold, lead and zinc production from Greens Creek, Lucky Friday and Casa Berardi Operations converted using \$1,700 gold, \$22 silver, \$1.00 lead, and \$1.50 zinc.

2022 GUIDANCE: PRODUCTION AND COSTS

<u>2022 Production Outlook</u>	Silver Production (Moz)	Gold Production (Koz)	Silver Equivalent (Moz) ⁶	Gold Equivalent (Koz) ⁶
Greens Creek*	8.6 – 8.9	40 – 43	20.7 – 21.2	268 – 275
Lucky Friday*	4.3 – 4.6	N/A	8.9 – 9.3	116 – 120
Casa Berardi	N/A	125 - 132	9.7 – 10.2	125 - 132
2022 Total	12.9 – 13.5	165 - 175	39.3 – 40.7	509 - 527

* Equivalent ounces include lead and zinc production

<u>2022 Consolidated Cost Outlook</u>	Costs of Sales and other direct production ("Cost of Sales") (million) ⁷	Cash cost, after by-product credits, per silver/gold ounce ⁵	AISC, after by-product credits, per produced silver/gold ounce ⁴
Greens Creek	\$230	\$0.75 - \$2.50	\$6.50 - \$8.50
Lucky Friday	\$115	\$0.75 - \$2.00	\$7.25 - \$9.25
Total Silver	\$345	\$0.75 - \$2.50	\$9.75 - \$11.75
Casa Berardi	\$210	\$1,175 - \$1,325	\$1,450 - \$1,600

⁽¹⁾ The term "reserve" means an estimate of tonnage and grade or quality of indicated and measured mineral resources that, in the opinion of the qualified person, can be the basis of an economically viable project. More specifically, it is the economically mineable part of a measured or indicated mineral resource, which includes diluting materials and allowances for losses that may occur when the material is mined or extracted. The term "proven reserves" means the economically mineable part of a measured mineral resource and can only result from conversion of a measured mineral resource. See footnotes 7 and 8 below.

⁽²⁾ Mineral reserves are based on \$17/oz silver, \$1600/oz gold, \$0.90/lb lead, \$1.15/lb zinc, unless otherwise stated.

⁽³⁾ The reserve NSR cut-off grades for Greens Creek are \$215/ton for all zones at Greens Creek except the Gallagher Zone at \$220/ton; metallurgical recoveries (actual 2021): 81% for silver, 72% for gold, 82% for lead, and 90% for zinc.

⁽⁴⁾ The reserve NSR cut-off grades for Lucky Friday are \$216.19 for the 30 Vein and \$230.98 for the Intermediate Veins; metallurgical recoveries (actual 2021): 95% for silver, 95% for lead, and 90% for zinc.

⁽⁵⁾ The average reserve cut-off grades at Casa Berardi are 0.101 oz/ton gold underground and 0.037 oz/ton gold for open pit. Metallurgical recovery (actual 2021): 85% for gold; US\$/CAN\$ exchange rate: 1:1.275.

⁽⁶⁾ The term "probable reserves" means the economically mineable part of an indicated and, in some cases, a measured mineral resource. See footnotes 8 and 9 below.

Totals may not represent the sum of parts due to rounding.

All estimates are in-situ except for the proven reserves at Greens Creek which are in surface stockpiles.

NYSE: HL Investors are cautioned that Reserves and Resources are as of December 31, 2021, and are dynamic during the year due to mining depletion, changing metal prices, changing costs or project economics, and new drill or mining information. These factors can impact Reserves and Resources either positively or negatively.

All estimates are in-situ. Mineral resources are exclusive of reserves.

Investors are cautioned that Reserves and Resources are as of December 31, 2021, and are dynamic during the year due to mining depletion, changing metal prices, changing costs or project economics, and new drill or mining information. These factors can impact Reserves and Resources either positively or negatively.

MINERAL RESOURCES FOOTNOTES

- ⁽⁷⁾ The term "mineral resources" means a concentration or occurrence of material of economic interest in or on the Earth's crust in such form, grade or quality, and quantity that there are reasonable prospects for economic extraction. A mineral resource is a reasonable estimate of mineralization, taking into account relevant factors such as cut-off grade, likely mining dimensions, location or continuity, that, with the assumed and justifiable technical and economic conditions, is likely to, in whole or in part, become economically extractable. It is not merely an inventory of all mineralization drilled or sampled. Resources are reported in accordance with Section 1300 of Regulation S-K of the Securities Act of 1933, as amended and NI 43-101.
- ⁽⁸⁾ The term "measured resources" means that part of a mineral resource for which quantity and grade or quality are estimated on the basis of conclusive geological evidence and sampling. The level of geological certainty associated with a measured mineral resource is sufficient to allow a qualified person to apply modifying factors, as defined in this section, in sufficient detail to support detailed mine planning and final evaluation of the economic viability of the deposit. Because a measured mineral resource has a higher level of confidence than the level of confidence of either an indicated mineral resource or an inferred mineral resource, a measured mineral resource may be converted to a proven mineral reserve or to a probable mineral reserve.
- ⁽⁹⁾ The term "indicated resources" means that part of a mineral resource for which quantity and grade or quality are estimated on the basis of adequate geological evidence and sampling. The level of geological certainty associated with an indicated mineral resource is sufficient to allow a qualified person to apply modifying factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Because an indicated mineral resource has a lower level of confidence than the level of confidence of a measured mineral resource, an indicated mineral resource may only be converted to a probable mineral reserve.
- ⁽¹⁰⁾ The term "inferred resources" means that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. The level of geological uncertainty associated with an inferred mineral resource is too high to apply relevant technical and economic factors likely to influence the prospects of economic extraction in a manner useful for evaluation of economic viability. Because an inferred mineral resource has the lowest level of geological confidence of all mineral resources, which prevents the application of the modifying factors in a manner useful for evaluation of economic viability, an inferred mineral resource may not be considered when assessing the economic viability of a mining project and may not be converted to a mineral reserve.
- ⁽¹¹⁾ Mineral resources are based on \$1700/oz gold, \$21/oz silver, \$1.15/lb lead, \$1.35/lb zinc and \$3.00/lb copper, unless otherwise stated.
- ⁽¹²⁾ The resource NSR cut-off grades for Greens Creek are \$215/ton for all zones at Greens Creek except the Gallagher Zone at \$220/ton; metallurgical recoveries (actual 2021): 81.26% silver, 72.34% gold, 82.29% lead, 89.58% zinc.
- ⁽¹³⁾ The resource NSR cut-off grades for Lucky Friday are \$170.18 for the 30 Vein, \$184.97 for the Intermediate Veins and \$207.15 for the Lucky Friday Vein; metallurgical recoveries (actual 2021): 95.18% silver, 94.62% lead, 89.97% zinc.
- ⁽¹⁴⁾ The average resource cut-off grades at Casa Berardi are 0.089 oz/ton gold (3.06 g/tonne) for underground and 0.036 oz/ton (1.22 g/tonne) for open pit; metallurgical recovery (actual 2021): 84.82% gold; US\$/CAN\$ exchange rate: 1:1.275.
- ⁽¹⁵⁾ Indicated resources for most zones at San Sebastian based on \$1500/oz gold, \$21/oz silver, \$1.15/lb lead, \$1.35/lb zinc and \$3.00/lb copper using a cut-off grade of \$90.72/ton (\$100/tonne); \$1700/oz gold used for Toro, Bronco, and Tigre zones. Metallurgical recoveries based on grade dependent recovery curves: recoveries at the mean resource grade average 89% silver and 84% gold for oxide material and 85% silver, 83% gold, 81% lead, 86% zinc, and 83% for copper for sulfide material. Resources reported at a minimum mining width of 8.2 feet (2.5m) for Middle Vein, North Vein, and East Francine, 6.5ft (1.98m) for El Toro, El Bronco, and El Tigre, and 4.9 feet (1.5 m) for Hugh Zone and Andrea.
- ⁽¹⁶⁾ Mineral resources for Fire Creek, Hollister and Midas are reported using \$1500/oz gold and \$21/oz silver prices, unless otherwise noted. A minimum mining width is defined as four feet or the vein true thickness plus two feet, whichever is greater.
- ⁽¹⁷⁾ Fire Creek mineral resources are reported at a gold equivalent cut-off grade of 0.283 oz/ton. Metallurgical recoveries: 90% gold, 70% silver.
- ⁽¹⁸⁾ Hollister mineral resources, including the Hatter Graben are reported at a gold equivalent cut-off grade of 0.238 oz/ton. Metallurgical recoveries: 88% gold, 66% silver.
- ⁽¹⁹⁾ Midas mineral resources are reported at a gold equivalent cut-off grade of 0.237 oz/ton. Metallurgical recoveries: 90% gold, 70% silver. A gold-equivalent cut-off grade of 0.1 oz/ton and a gold price of \$1700/oz used for Sinter Zone with resources undiluted.
- ⁽²⁰⁾ Measured, indicated and inferred resources at Heva and Hosco are based on \$1,500/oz gold. Resources are without dilution or material loss at a gold cut-off grade of 0.01 oz/ton (0.33 g/tonne) for open pit and 0.088 oz/ton (3.0 g/tonne) for underground. Metallurgical recovery: Heva: 95% gold, Hosco: 87.7% gold.
- ⁽²¹⁾ Indicated and Inferred resources at the Star property are reported using \$21 silver, \$0.95 lead, \$1.10 zinc, a minimum mining width of 4.3 feet and a cut-off grade of \$100/ton; Metallurgical recovery: 93.38% silver, 93.33% lead, 86.96% zinc.
- ⁽²²⁾ Inferred open-pit resources for Fire Creek calculated November 30, 2017, using gold and silver recoveries of 65% and 30% for oxide material and 60% and 25% for mixed oxide-sulfide material. Indicated Resources reclassified as Inferred in 2019. Open pit resources are calculated at \$1400 gold and \$19.83 silver and cut-off grade of 0.01 Au Equivalent oz/ton and is inclusive of 10% mining dilution and 5% ore loss. Open pit mineral resources exclusive of underground mineral resources.
- ⁽²³⁾ Inferred resources reported at a minimum mining width of 6.0 feet for Bulldog and a cut-off grade of 6.0 equivalent oz/ton silver and 5.0 feet for Equity and North Amethyst vein at a cut-off grade of \$50/ton and \$100/ton; based on \$1400 Au, \$26.5 Ag, \$0.85 Pb, and \$0.85 Zn. Metallurgical recoveries based on grade dependent recovery curves: recoveries at the mean resource grade average 88% silver and 74% lead for the Bulldog and a constant 85% gold and 85% silver for North Amethyst and Equity.
- ⁽²⁴⁾ Inferred resource at Monte Cristo reported at a minimum mining width of 5.0 feet; resources based on \$1400 Au, \$26.5 Ag using a 0.06 oz/ton gold cut-off grade. Metallurgical recovery: 90% gold, 90% silver.
- ⁽²⁵⁾ Inferred resource at Rock Creek reported at a minimum thickness of 15 feet and a cut-off grade of \$24.50/ton NSR; Metallurgical recoveries: 88% silver, 92% copper. Resources adjusted based on mining restrictions as defined by U.S. Forest Service, Kootenai National Forest in the June 2003 'Record of Decision, Rock Creek Project'.
- ⁽²⁶⁾ Inferred resource at Montanore reported at a minimum thickness of 15 feet and a cut-off grade of \$24.50/ton NSR; Metallurgical recoveries: 88% silver, 92% copper. Resources adjusted based on mining restrictions as defined by U.S. Forest Service, Kootenai National Forest, Montana DEQ in December 2015 'Joint Final EIS, Montanore Project' and the February 2016 U.S Forest Service - Kootenai National Forest 'Record of Decision, Montanore Project'.
