

Denka

Possibility of chemistry

Results Presentation of FY2023 (Fiscal Year Ended March 2024)

Securities code: 4061

Denka Co., Ltd

May 10, 2024

The EPA emission regulations will have a significant impact on whether Denka Performance Elastomer (DPE) will be able to continue operations in the U.S. DPE is considering all possible responses, including taking legal actions seeking a revision of the regulations.

(Press release) • April 17 2024: Announcement of New Regulations set by the U.S. Environmental Protection Agency that apply to Chloroprene Rubber Manufacturing Facilities in the U.S. <u>https://www.denka.co.jp/eng/storage/news/pdf/490/20240417_denka_dpe_en.pdf</u>

Details and Company Response								
Details	 April 9, 2024 (local time) U.S. Environmental Protection Agency (EPA) announces new chemical air emission regulations applicable to chloroprene rubber manufacturing facilities in the U.S., including facilities operated by DPE 							
	·Details of the rules call for significant reductions in chloroprene monomer emissions							
	•The rules take effect 60 days from publication of the rules in the federal register, and the grace period for compliance is 90 days from the date of effect (Date of publication in the federal register: Not published as of now)							
Company Response	•The Company is considering all possible measures to have the new regulations revised, including taking the matter to the U.S. Court of Appeals							
	•We are carefully investigating the impact the regulations will have on DPE chloroprene rubber manufacturing operations and financial results							

* DPE: Denka Performance Elastomer LLC, a U.S. chloroprene rubber manufacturing subsidiary

Presentation Highlights

FY2023 Results (P4-P13)	 Operating income: 13.4 billion yen -18.9 billion yen year on year Net income: 11.9 billion yen -0.8 billion yen year on year Gain on sale of strategic cross-shareholdings Portfolio transformation +12.5 billion yen (FY2022 +5.0 billion yen → FY2023 +17.4 billion yen) +10.9 billion yen (FY2022 -17.7 billion yen → FY2023 -6.8 billion yen) *FY2022: Recorded an extraordinary loss due to the withdrawal from the cement business; FY2023: Recorded an impairment loss on goodwill, etc., related to Icon Genetics due to termination of norovirus vaccine development
FY2024 Earnings Forecast (P14-P25)	 Operating income: 18.0 billion yen +4.6 billion yen year on year Net income: 9.0 billion yen -2.9 billion yen year on year We have not factored in the impact of drastic measures for the chloroprene rubber business planned for announcement during 2024
Shareholder Returns (P26)	 Maintain 100 yen per share dividend, the same as the previous year, taking into account the impact drastic measures in the chloroprene rubber business to be announced during 2024, cash flow improvement for FY2025 and beyond, etc. (total return ratio of 96%) Future dividend policy: Aiming to maintain or increase dividend per share based on a total return ratio of 50% (cumulative total for the eight years of the management plan)
Response to Changed Assumptions Under Mission 2030 Management Plan (P27-P32)	 A positive shareholder return policy, carefully selected strategic investments (reduce investment plan by 100 billion yen cumulatively over eight years), portfolio transformation, and best practice project Return performance to a growth trajectory in the second half of FY2024, while maintaining a steady D/E ratio of 0.6x to 0.8x

FY2023 Results

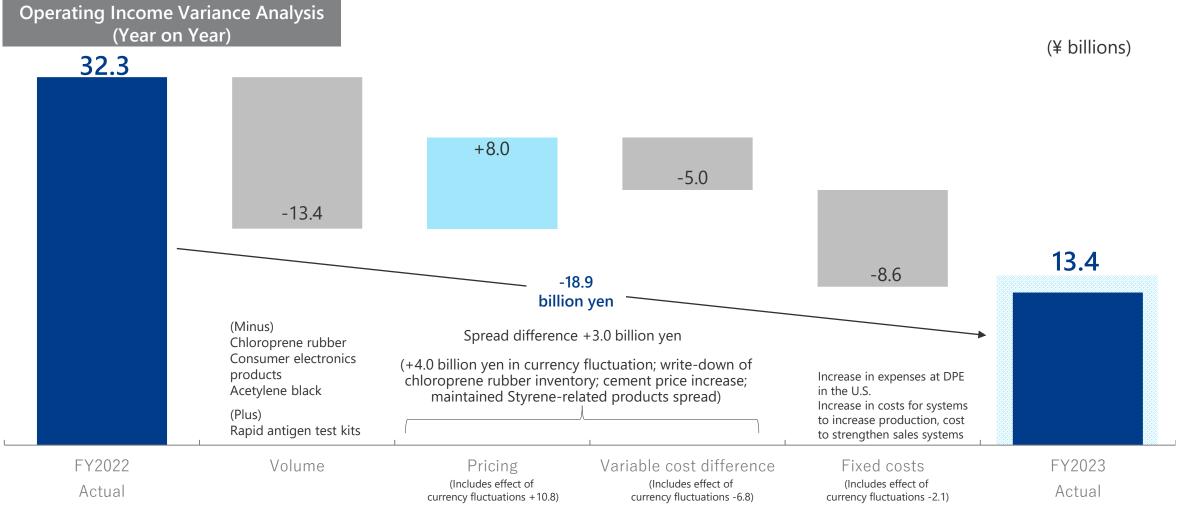

Operating income decreased year on year due to slowing demand and other factors, net income was impacted by the posting of a 17.4 billion yen gain on the sale of strategic cross-shareholdings and a 6.8 billion yen impairment loss due to the termination of norovirus vaccine development

(¥ billions)	FY2022 Actual	FY2023 Actual	(Year on Year)	FY2023 Forecast as of February		recast as ebruary)
Sales	407.6	389.3	- 18.3	380.0	+	9.3
Operating Income	32.3	13.4	- 18.9	11.0	+	2.4

Profit declined significantly due to major decrease in demand for consumer electronics (smartphones, PCs) in FY2022 3Q, weak demand for high-voltage cables, and cost increases beginning

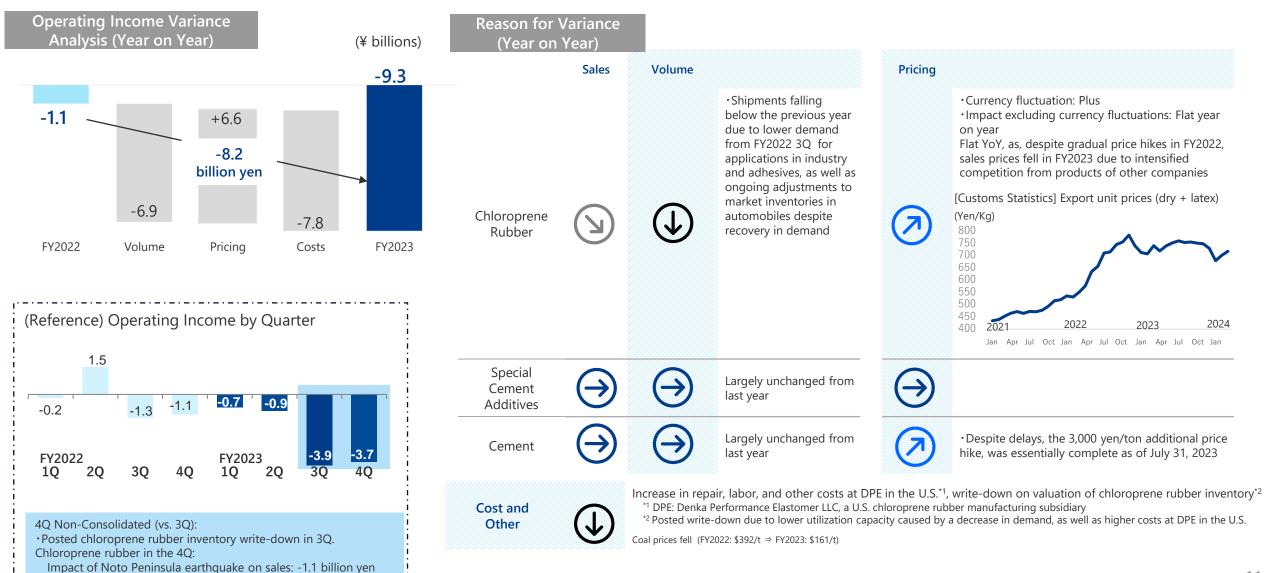

Profit decreased, despite an increase in demand for simultaneous test kits for COVID 19 and influenza (combo kits), due to cost increases, etc.

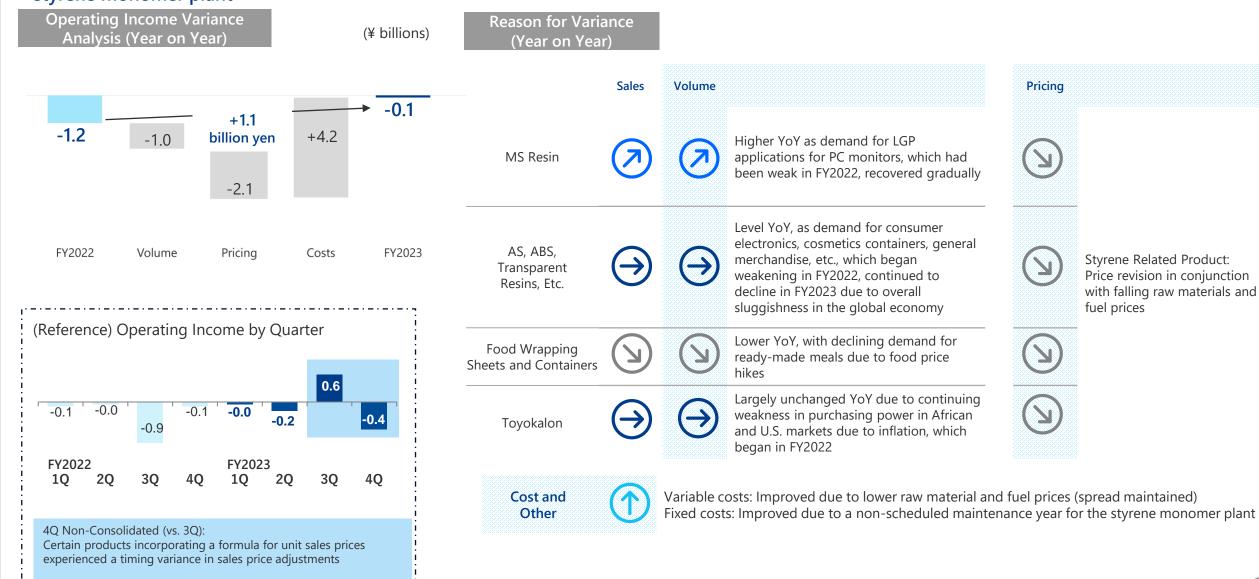

...

Profit decreased significantly with weak demand for chloroprene rubber, cost increases, including repairs and labor costs at DPE in the U.S., and inventory valuation write-downs

Profit improved, despite weak demand, since we maintained spreads and fixed costs decreased due to a non-scheduled maintenance year for the styrene monomer plant

Elastomers & Infrastructure Solutions performance exceeded the February forecast, as we maintained chloroprene rubber sales prices and recorded a smaller inventory write-down as a result

Gain on sale of strategic cross-shareholdings +17.4 billion yen

FY2024 Earnings Forecast **b) Market Outlook**

Demand for contract the second has		/ should recover gradually beginning in	Weather Sy (Good)	ymbols
	(Market Trends)	FY2023 Actual	<u></u>	FY2024 Forecast
Electronics & Innovative		Automotive-Related: Gradual recovery Consumer Electronics: Electronic components and semiconductors for other than memory should see a moderate recovery beginning in the second half; recovery likely to lag for memory-related		Automotive-Related: Moderate recovery continuing from 2023 Consumer Electronics: Electronic components and semiconductors for other than memory should see a moderate recovery; demand to recover in the second half for memory and expand further for generative Al
Products	xEV	 Recovery trajectory since FY2022 However, the growth rate of EV in Europe and the U.S. is slower than EV in China (our products account for a high percentage o sales in Europe and the U.S.) 		 Growth slower than expected due to reduced EV subsidies in Europe, etc., but the market growth trend itself should continue However, the growth rate of EV in Europe and the U.S. is slower than EV in China (our products account for a high percentage of sales in Europe and the U.S.)
Life Innovation	Infectious Disease Testing (e.g., COVID-19, influenza)	 An influenza pandemic continued throughout the year, as did COVID-19, increasing the demand for testing in Japan No revisions to COVID-19 insurance points 		 Influenza infections to return to normal levels Assuming FY2023 levels for COVID-19 COVID-19 insurance point reduction (revised June 1, 2024) COVID-19 alone: 300 points → 150 points Combo: 420 points → 225 points
Elastomers & Infrastructure Solutions	Chloroprene Rubber	 Global chloroprene rubber demand was 220,000 tons Ongoing weakness in demand for applications in industry and adhesives as well as ongoing adjustments to market inventories in automobiles despite recovery in demand Sales prices lower gradually due to intensifying competition wit the products of other companies beginning during the current fiscal year 		 Global demand for chloroprene rubber expected to be 230,000 tons Gradual recovery in demand beginning in the second half Further decline in sales prices continuing from FY2023
Polymer Solutions	Resin	Demand for LGP applications for PCs and home electronics on a recovery trajectory; however, demand for other applications remained sluggish General Merch.: Demand remained sluggish Food Containers: Decreased in demand in the ready-made meal market with further rising food price		Steady demand for LGP applications for PCs and home appliances, moderate recovery in other applicationsGeneral Merch.:Demand to remain sluggishFood Containers:Wage increases have not kept pace with higher prices, and demand likely to remain weak in the ready-made market

Recovery in sales volume likely to be limited as demand will not recover until the second half of the fiscal year. In addition, we do not expect a recovery to FY2021 profit levels (record-high levels) yet due to worsening spreads and increased fixed costs

Despite expectations for decreased profits in Life Innovation, we expect profits to improve in Electronics & Innovative Products and Elastomers & Infrastructure Solutions.

(¥ billions)

FY2024 Earnings Forecast e) Electronics & Innovative Products (Composition by Application)

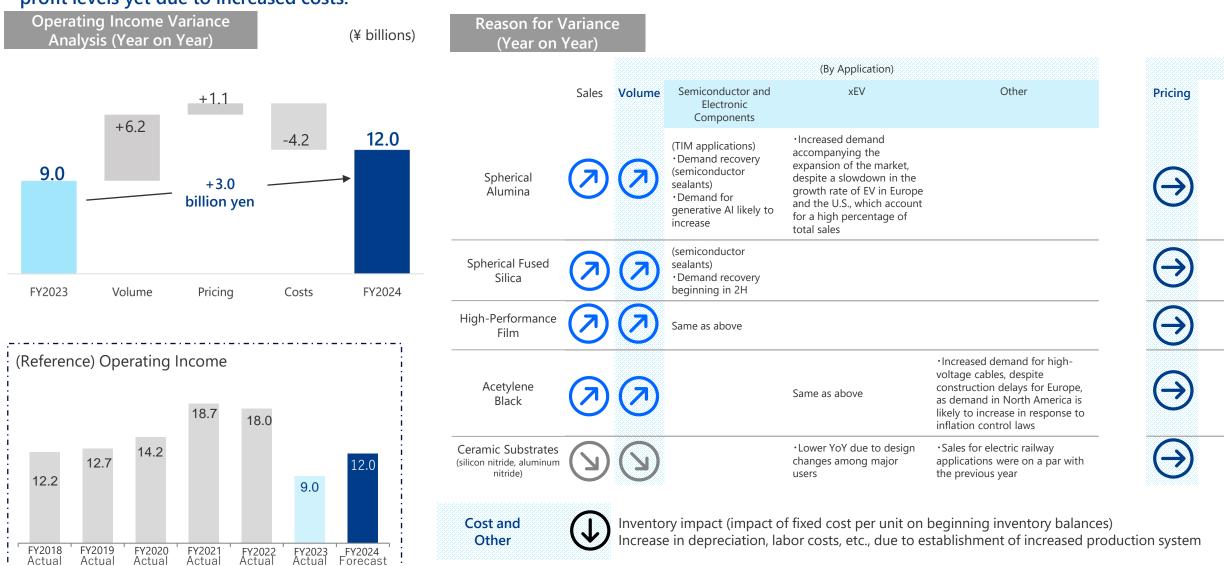

Recovery is likely to be delayed;

however, business growth in megatrending semiconductors, xEV, and renewable energy

We expect demand recovery for both consumer electronic and xEV applications to be limited. In addition, we do not expect a recovery to FY2021 profit levels yet due to increased costs.

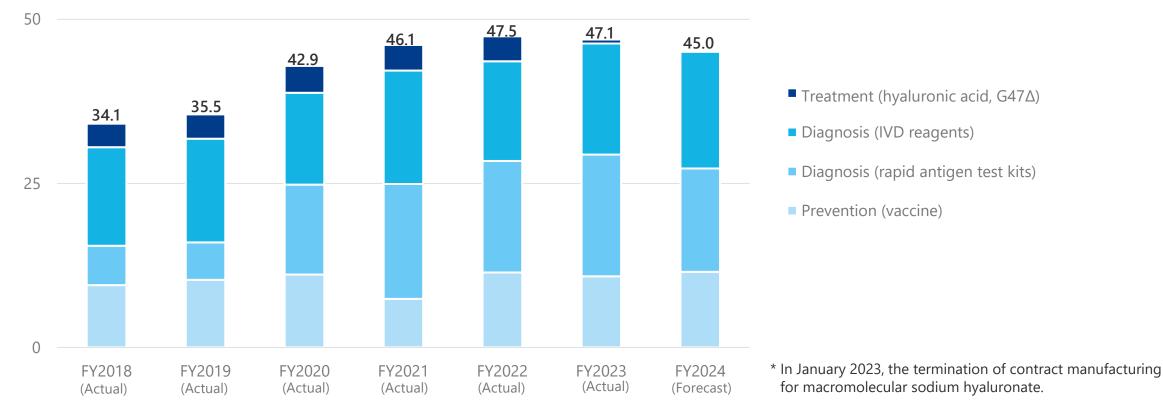

*TIM (Thermal Interface Materials)

Demand for testing expanded due to changes in the environment for infectious diseases after COVID-19, driving growth in the diagnostic field (IVD reagents, rapid antigen test kits) in FY2024 and beyond

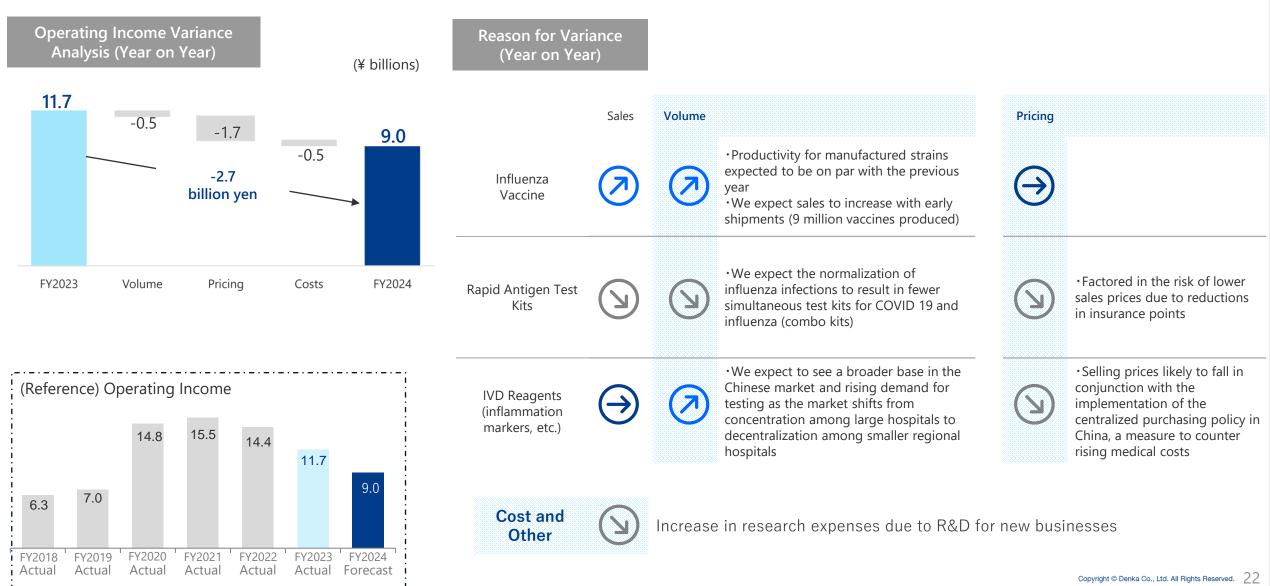

(Sales: ¥billions)

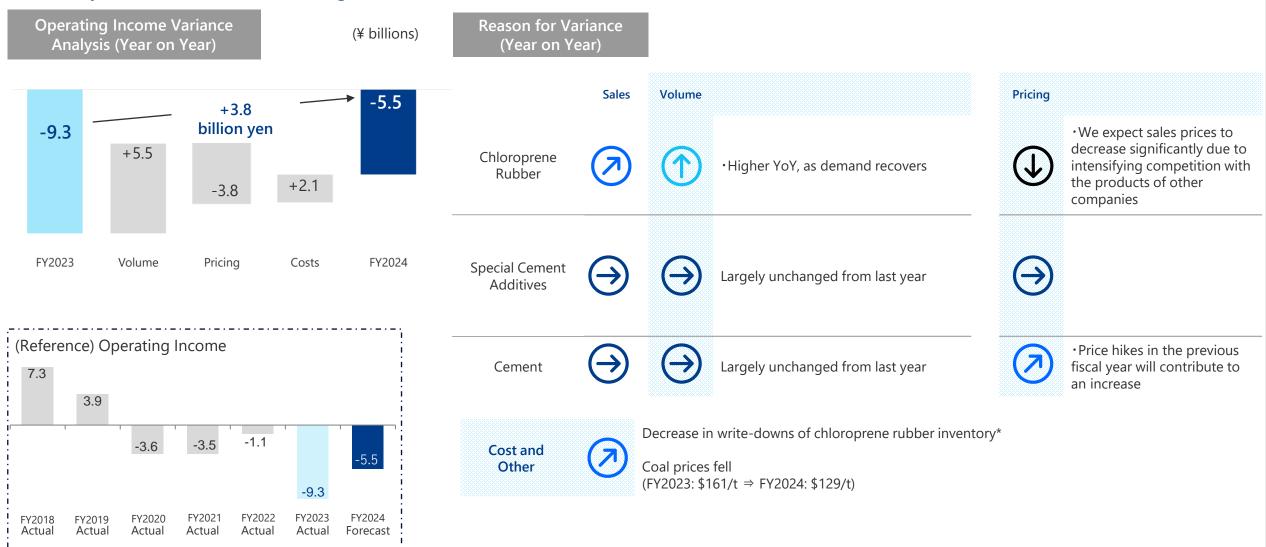

Denka

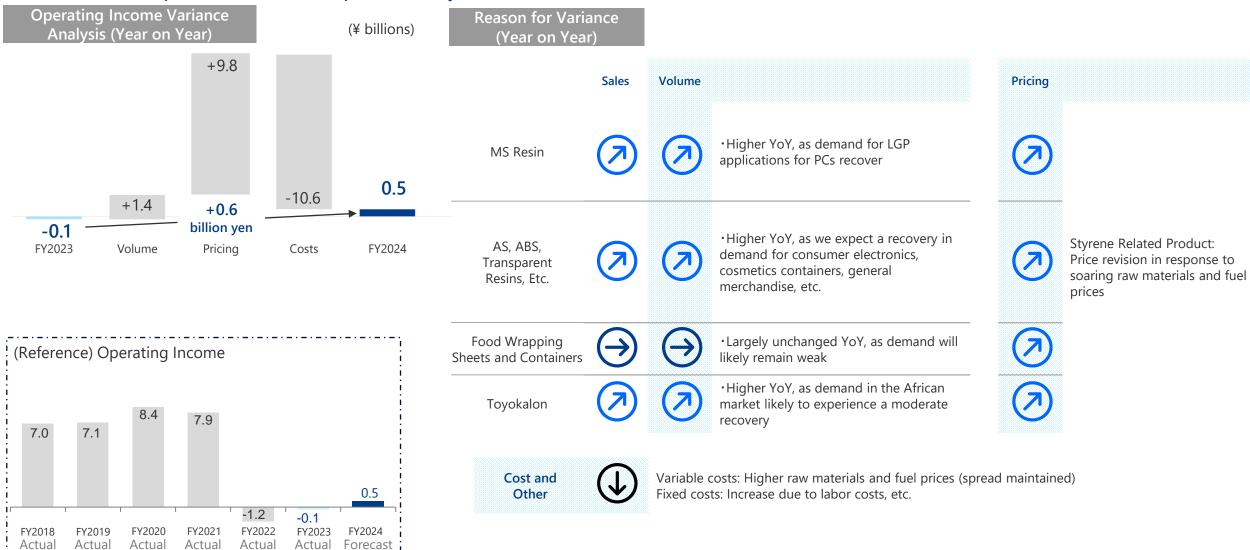

We forecast a decrease in profit due to lower profits from rapid antigen test kits (impact of lower sales prices and lower sales volume), higher research expenses, etc.

Despite lower sales prices, chloroprene rubber should see narrower losses with an increase in sales volume and a decrease in the amount of inventory write-downs; as a whole, segment loss should also narrow

Demand for PCs, home appliances, and other products should experience a moderate recovery, but we do not expect to reach FY2021 profit levels yet

We will pursue further selectivity in investments, while we expect to make important strategic investments in FY2024, including a new manufacturing hub for acetylene black in Thailand and construction to increase production of IVD reagents and rapid antigen test kits

(¥ billions)

ROIC	10% or higher	7.3%	2.5%	3.0%
oproved Investment Amount	FY23 to FY30 (8 Yrs) 540 billion yen	35.6 billion yen	116.7 billion yen	42.0 billion yen

Environmental Changes Alter Management Plan Assumptions

(Result)

Upfront investments prevent us from achieving sales volume growth commensurate with increased costs

FY2023 Operating Income Variance Analysis (vs. FY2021) •Volume difference: -10.0 billion yen •Fixed cost difference: -15.0 billion yen

Response
Results: Return to growth trajectory beginning in the second half of FY2024
Financial: Target a D/E ratio of between 0.6x and 0.8x

Denka

We will return our performance to a growth trajectory in the second half of fiscal 2024 and control our D/E ratio to 0.6-0.8 times by maintaining an aggressive shareholder return policy, carefully selected strategic investments, portfolio transformation and promotion of the best-practice project

Positive Shareholder Return Policy

Total return ratio of 50% (cumulative eight-year total for plan)

Aiming to maintain or increase dividends per share, taking into account future cash flows, etc.

Revise Investment Plans

Careful Selection of Investment Projects Aiming to reduce investment cash flow by 100 billion yen over eight years

Portfolio Transformation

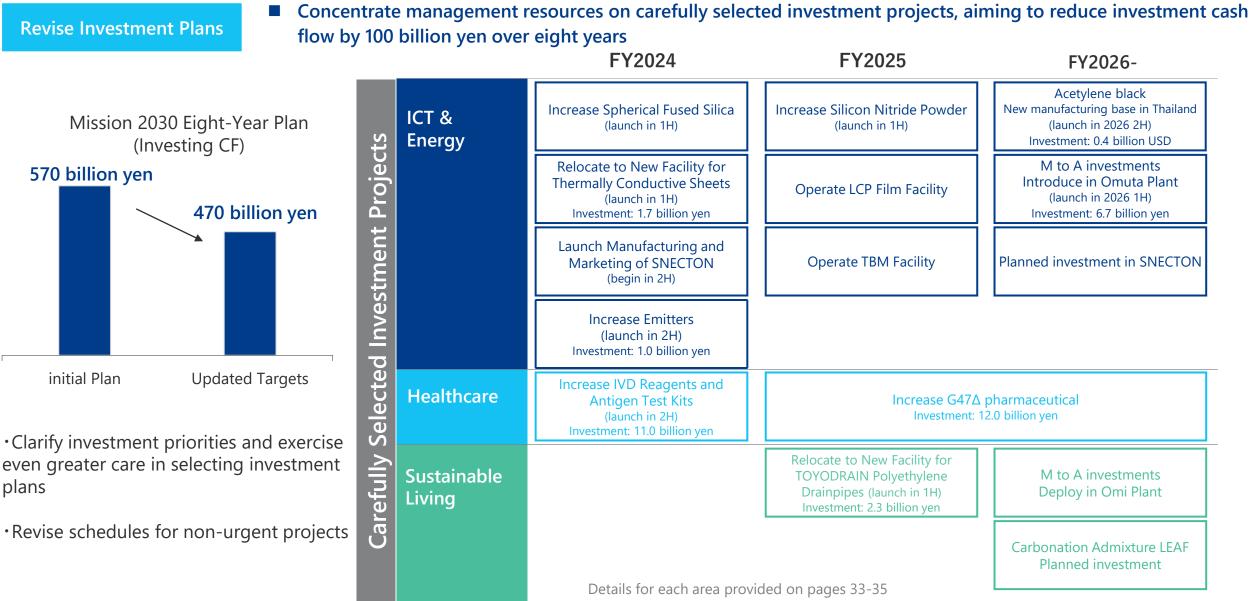

Top priority: Drastic measures in the chloroprene rubber business (to be determined by the end of 2024)

Best Practice Project

Cost Reduction 10.0 billion yen or more per year by FY2026 Business Streamlining Individual employee growth

Unit: No. of businesses

Portfolio Transformation

Pursue business restructuring, including divestitures and withdrawals, to concentrate management resources on growth areas, improve business performance, and bolster finances

Progress

•Plans to implement final measures over a defined period of time for six businesses

1-star and loss-making businesses discussed in FY2023; policies to be determined by the end of FY2024. Six of these businesses to implement final measures over a defined period of time.

Six businesses: Total operating loss of -15.0 billion yen

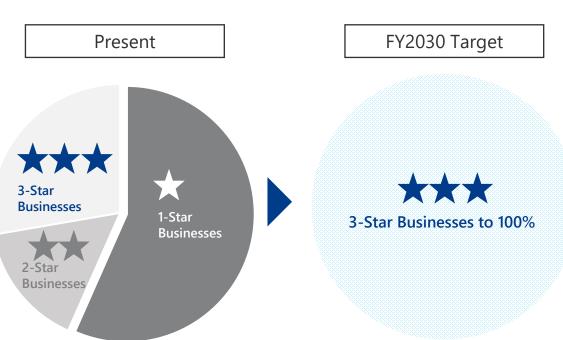

Highest Priority:

Drastic measures for the chloroprene rubber business (to be decided by the end of 2024)

- (1) Examine demand trends for signs of recovery to the pre-COVID-19 level of 270,000 tons to 290,000 tons
- (2) Examine optimal production capacity for chloroprene rubber for the Denka Group in the Omi Plant and DPE in the U.S. in light of perspectives including exchange rate trends, raw material market conditions, and BCP measures, based on the assumption of future demand trends

Accelerate considerations related to styrene related product business

Accelerate considerations of sales and production optimization for the styrene related product business, which is neither a 1-star nor a loss-making business, considering how to address the ongoing slump in polymer solutions and trends in industry restructuring

See page 37 for the definition of a 3-star business

Best Practice Project

To Date

In addition to achieving results of 5 billion yen per year by FY2025 and 10 billion yen per year by FY2026, we intend to improve the efficiency of human capital for operational efficiencies and the individual growth of each employee

Cost reductions based on in-house knowledge

Make full use of external benchmarking and best practice

Best Practice Project

Global optimization

Scientific approach

data

Zero-based review

Engage in consistent cross-departmental coordination and pursue overall optimization

• Engage in rational cost management based on facts and

Conduct thorough review of needs, cost justifications

System

- President personally committed as overall leader
- Establish the Best Practice Promoting Department to act as a dedicated organization
- Appoint an owner with numerical accountability for each team

Governance

- Conduct rigorous progress management and timely visualization of results
- Use monthly policy-making meetings to receive top approvals for goals and measures

FY2025

Engagement

- Involve all employees in detailed management-employee dialogues
 Share a portion of successful results with employees

FY2026

Pursue best practice to achieve not only numerical results, but also individual employee growth (¥ billions) Target 10.0 1.0 5.0 FY2024

ICT & Energy (1)

Acetylene black New manufacturing base in Thailand (launch in 2026 2H) Investment: 0.4 billion USD	 Applications: LiBs for xEV, high voltage transmission line cables for offshore wind power generation In response to the rapidly growing demand for acetylene black, we established a joint venture with SCG Chemicals Public Company for the manufacturing and sale of acetylene black, and will construct a plant with an annual production capacity of 11,000 tons Operation launch: 2026 2H Investment amount: US\$400 million Investment ratio: DENKA Group 60%, SCG 40% https://www.denka.co.jp/eng/storage/news/pdf/463/20231010_denka_abjv_en.pdf
Increase Silicon Nitride Powder (launch in 2025 1H)	 Applications: insulating substrates for xEV inverters in power modules, bearing balls for traction motors Reliable quality and cost-effective performance that meet requirements in the xEV (automotive) market: heat dissipation, light weight, high rigidity, and long useful life Expand further to meet the strong xEV market demand (Operation launch: FY2025)
Increase Spherical Fused	

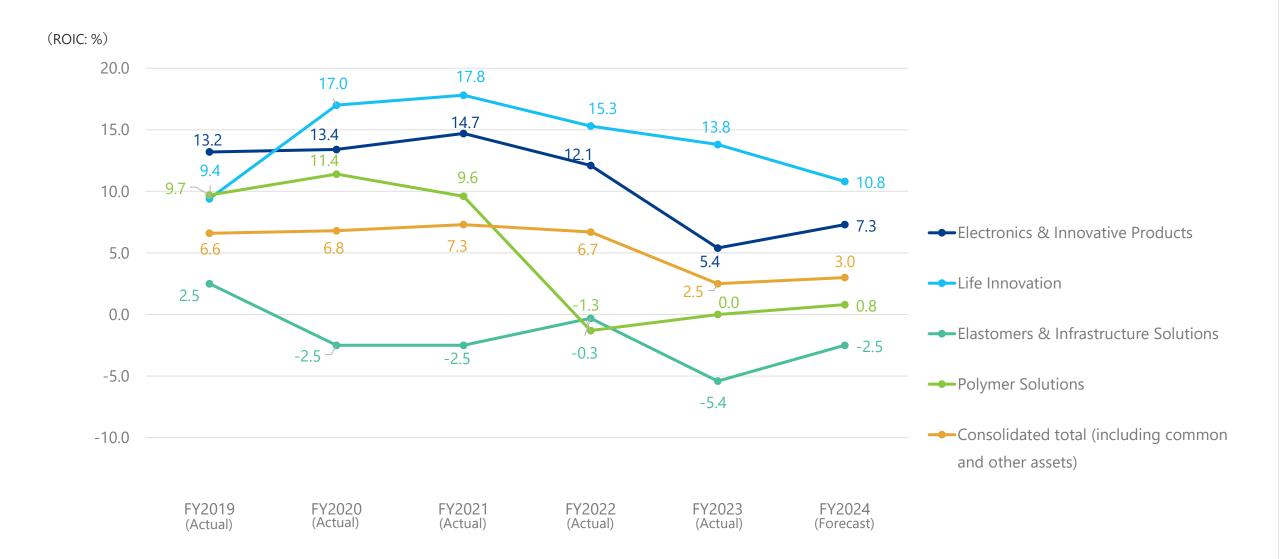

Increase Spherical Fused Silica (launch in 2024 1H) • Decision to Expand Spherical Fused Silica Manufacturing Facilities in Singapore -Increasing manufacturing capacity by approximately 30% for further growth in the environment and energy fieldshttps://www.denka.co.jp/eng/storage/news/pdf/470/20220511_denka_silica_en.pdf

Relocate to New Facility for Thermally Conductive Sheets (launched in 2024 1H) Investment: 1.7 billion yen

Denka Introduces New Production Facility for Thermally Conductive Sheet for 5G/xEV to Shibukawa Plant and Doubles Production Capacity
 -Positioning as One of the Core Production Plants of Electronic Materials to Enhance Specialty Business https://www.denka.co.jp/eng/storage/news/pdf/376/20211125_denka_shibukawa_en.pdf

	ICT & Energy (2)
Increase Emitters (launch in 2024 2H) Investment: 1.0 billion yen	 Applications: Surface observation application for semiconductor materials and devices (wafer inspection, mask inspection, etc.) and circuit patterning application in semiconductor manufacturing lithography processes, etc. Demand for emitters capable of emitting electronic wires only a few micrometers thick due to miniaturization and microminiaturization of semiconductors. Enhance to meet growing demand
SNECTON (Low Dielectric Macromonomer/LDM)	 Applications: Substrates for copper clad laminates (CCL) and interlayer dielectric materials We resolve issues faced by soft materials in heat resistance and dielectric properties. Evaluation is progressing steadily as a base material for rigid substrates for high speed communications and an interlayer dielectric material. As the only manufacturer of both resin materials and inorganic fillers, we are able to offer our own unique proposals by Varnish, a resin filler mixture.
LCP Film (Liquid Crystal Polymer Film)	 Applications: Substrates for flexible copper clad laminates (FCCL) LCP is a extremely difficult resin to make into film, and few manufacturers can provide a stable supply of LCP. By applying the film deposition technology for organic materials cultivated in the electronic packaging and food packaging sheet businesses, we have established a technology for manufacturing LCP using the T-die method (T die extrusion method), which offers superiority in mass production and film thickness control. LCP is expected to be a base material for flexible circuits of high speed communications.
TBM (Temporary Bonding Material for use in Semiconductor Manufacturing Processes)	•Applications: Temporary fixing heat-resistant adhesive used in back-grinding process to thin wafers in the semiconductor manufacturing process •The most common method of protecting wafer circuit surfaces and fixing wafers to equipment is through temporary fixing with tape, such as our Elegrip, due to its cost and simplicity. However, using adhesives to temporarily fix wafers is common when processing difficult-to-grind wafers, such as ultra-thin films or hard and brittle wafers, to improve handling. In addition, the polished surfaces after back grinding are subjected to high temperature treatment in the manufacturing of next-generation semiconductors, such as power devices. As tapes cannot be used on these surfaces due to insufficient heat resistance, the market for heat-resistant adhesives is expected to expand.

	Healthcare
Increase G47∆ pharmaceutical Investment: 12.0 billion yen	 ·G47Δ is the world's first approved oncolytic therapeutic virus for malignant glioma (brain tumors) ·We decided to increase G47Δ in preparation for a rapid increase in future demand, such as in overseas expansion and clinical research in other types of cancers ·Investment: Approximately 12 billion yen https://www.denka.co.jp/eng/storage/news/pdf/456/20230412_denka_g47_en.pdf
Increase IVD Reagents and Antigen Test Kits (launch in 2024 2H) Investment: 11.0 billion yen	• Denka Announces Expansion of Reagent Production Capacity Including Antigen Test Kits through Strategic Investment of Approximately 11 Billion Yen - Strengthening Health Care Business and Commitment to Control Infectious Diseases Worldwide- _https://www.denka.co.jp/eng/storage/news/pdf/409/20220414_denka_gosen_en.pdf
	Sustainable Living
M to A (Methane to Acetylene) Investment Introduce in Omuta Plant (launch in 2026 1H) Investment: 6.7 billion yen ⇒Deploy in Omi Plant	 •To reduce CO₂ emissions, we introduced equipment to the Omuta plant for a new process to produce acetylene from methane developed by Transform Materials, a venture company in the U.S. We demonstrate this technology and conduct joint research on technological improvements toward large scale mass production of acetylene. •We deploy M to A, which established mass production technology at Omuta plant, to the carbide chain at the Omi Plant, which has our unique hydroelectric power generation system. This enabled us to achieve low carbon chloroprene rubber and utilize hydrogen energy obtained as a byproduct of the manufacturing process. •We expect to reduce 300,000 ton of CO₂ through the conversion of our current manufacturing method (the carbide method) and the utilization of hydrogen •Operation launch: FY2026 1H https://www.denka.co.jp/eng/storage/news/pdf/468/20230809_mtoa_en.pdf
Carbonation Admixture LEAF	 This is the key material for CO₂-SUICOM, the world's only carbon-negative concrete in used in practical application A consortium of 55 companies, led by Kajima Corporation, Takenaka Corporation, and our Company, made a joint proposal to the NEDO Green Innovation Fund Projects, aiming for the full-scale diffusion of LEAF. The proposal was adopted. The consortium developed CUCO, a precast component for construction, which was used as a foundational component in temporary buildings for the Expo 2025 Osaka, Kansai, Japan. This is the first time the component has been applied to an actual building since its use in civil engineering structures in FY2022. *Released by Takenaka Corporation https://www.takenaka.co.jp/news/2023/10/04/
Relocate to New Facility for TOYODRAIN Polyethylene Drainpipes (launch in 2025 1H) Investment: 2.3 billion yen	Denka Increases Capacity to Produce TOYODRAIN Polyethylene Drainpipes Through Strategic Investment of Approximately 2.3 Billion Yen https://www.denka.co.jp/eng/storage/news/pdf/432/20221011_toyodrain_en.pdf Copyright © Denka Co., Ltd. Three Elements	Definition	Objective
Specialty	ROIC by Product >10% (Past Three-Year Avg.)	To emphasize capital efficiency, in addition to profits resulting from market share, uniqueness, and technological capabilities (number of patents)
Megatrend	Three Applicable Focus Areas (ICT & Energy, Healthcare, and Sustainable Living)	Businesses judged to have growth potential if said business corresponds to the three focus areas derived from identified megatrends
Sustainability	Less Than 10,000 Tons of CO ₂ Emissions by Product and Labor Productivity by Product (Op. Inc./Person) > 5 million Yen	CO₂ emissions must be included, as emissions represent clear KPIs toward a 60% reduction in 2030 and carbon neutrality in 2050 In addition, businesses having low labor productivity will find it difficult to continue operations due to the future decline in the working population

2030 KPI Targets

Cautionary statement regarding forward-looking information

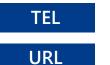

Target figures in this material are not forecasts of business results. In addition, any description relating to the future in this material is subject to known or unknown risks and uncertainties, although it is based on management's current assumptions and beliefs in light of the information currently available to it. Please be cautioned that a number of important factors could cause actual results to differ significantly from the description in the material. Such risks and uncertainties include adverse economic conditions, currency exchange rate fluctuations, adverse legislative and regulatory developments, delays in new product launch, pricing, and product initiatives of competitors, the inability of the Company to market existing and new products effectively, interruptions in production, infringements of the company's intellectual property rights and the adverse outcome of material litigation.
