Aurora ATM System Successfully Passes Seychelles Civil Aviation Authority Site Acceptance Testing

Montreal, Canada, 7 March 2023--Adacel Technologies Limited (**Adacel** or the **Company**), an industry leader in advanced air traffic management and ATC simulation and training systems, is pleased to announce the Aurora ATM system delivered to Seychelles Civil Aviation Authority (**SCAA** or **Seychelles**) has successfully passed the Site Acceptance Testing (**SAT**).

Seychelles' new Aurora ATM system, developed to modernize SCAA's air traffic management system, will enhance ATM service delivery by providing surveillance control with space- and ground-based ADS-B stations.

Aurora is a 4D flight profile-based ATM system incorporating all available surveillance sources, with advanced automation capabilities for oceanic, enroute, approach, and tower control.

"We are proud to successfully pass this important milestone with SCAA and look forward to the introduction of the Aurora ATM system into the Seychelles Flight Information Region," shares Daniel Verret, Adacel's CEO. "The new system will enhance airspace efficiency, enable higher levels of service to airspace users, and reduce controller workload," continues Mr. Verret.

Speaking about the implementation of the new Aurora system, SCAA Chief Executive Officer Mr. Garry Albert said: "Reaching this project stage is a great accomplishment for us. By installing this state-of-the-art system, we will modernize the air traffic service to a level that has never been seen before in Seychelles. The collaboration with the professional team from Adacel has ensured that we have one of the most advanced systems. Combining this new technology with SCAA's well-trained human resources, we will provide an excellent service to our stakeholders from all over the world who fly in our vast oceanic airspace located on the east coast of Africa."

About Adacel:

Established in 1987, Adacel is a publicly traded company listed on the ASX. The company plays a significant role in global air space safety. A world-leader in its industry, Adacel applies cutting-edge technologies to develop advanced air traffic

control simulation and training systems and state-of-the-art air traffic management solutions. Adacel's customers include international air navigation service providers (ANSPs), military, defense & security organizations, universities, and airport authorities. More than 21% of the world's airspace is managed with Adacel's Aurora ATM software. MaxSim Tower Simulation and Training systems lead the industry with the highest number of installations worldwide. MaxSim is also the first ATC simulation system in the world to deliver Virtual and Mixed Reality training capabilities into the classroom. Adacel's latest flagship system, REVAL, a digital remote Air Traffic Control (ATC) tower system delivers a wide spectrum of digital tower operational solutions, from consulting services to system design, development, deployment, and support.
