

Disclaimers & Compliance Statements

BELLEVUE

This Presentation has been prepared by Bellevue Gold Limited (Company) and is authorised by the Managing Director of Bellevue Gold Limited.

DISCLAIMER

This Presentation has been prepared by the Company based on information from its own and third party sources and is not a disclosure document. No party other than the Company has authorised or caused the issue, lodgement, submission, despatch or provision of this Presentation, or takes any responsibility for, or makes or purports to make any statements, representations or undertakings in this Presentation. Except for any liability that cannot be excluded by law, the Company and its related bodies corporate, directors, employees, servants, advisers and agents disclaim and accept no responsibility or liability for any expenses, losses, damages or costs incurred by you relating in any way to this Presentation including, without limitation, the information contained in or provided in connection with it, any errors or omissions from it however caused, lack of accuracy, completeness, currency or reliability or you or any other person placing any reliance on this Presentation, its accuracy, completeness, currency or reliability. Information in this Presentation which is attributed to a third-party source has not been checked or verified by the Company. This Presentation is not a prospectus, disclosure document or other offering document under Australian law or under any other law. It is provided for information purposes and is not an invitation nor offer of shares or recommendation for subscription, purchase or sale in any jurisdiction. This Presentation does not purport to contain all the information that a prospective investor may require in connection with any potential investment in the Company. It should be read in conjunction with, and full review made of the Company's disclosures and releases lodged with the Australian Securities Exchange (ASX) and available at www.asx.com.au. Each recipient must make its own independent assessment of the Company shares in the Company.

NOT INVESTMENT ADVICE

This Presentation does not provide investment advice or financial product advice. Each recipient of the Presentation should make its own enquiries and investigations regarding all information in this Presentation including but not limited to the assumptions, uncertainties and contingencies which may affect future operations of the Company and the impact that different future outcomes might have on the Company. Information in this Presentation is not intended to be relied upon as advice to investors or potential investors and has been prepared without taking account of any person's individual investment objectives, financial situation or particular needs. Before making an investment decision, prospective investors should consider the appropriateness of the information having regard to their own investment objectives, financial situation and needs and seek legal, accounting and taxation advice appropriate to their jurisdiction. The Company is not licensed to provide financial product advice in respect of its securities.

INVESTMENT RISK

There are a number of risks specific to the Company and of a general nature which may affect the future operating and financial performance of the Company and the value of an investment in the Company, including and not limited to the Company's capital requirements, the potential for shareholders to be diluted, risks associated with the reporting of resources and reserves estimates, budget risks, underwriting risk, risks associated with the COVID-19 pandemic and operational risk. An investment in Shares is subject to known and unknown risks, some of which are beyond the control of the Company. The Company does not guarantee any particular rate of return or the performance of the Company. Investors should have regard to the risk factors outlined in the Company's FS2 presentation announced to the ASX on 2 September 2021 under the section titled "Risks" when making any investment decision.

FORWARD LOOKING INFORMATION

This Presentation contains forward-looking statements. Wherever possible, words such as "intends", "expects", "scheduled", "estimates", "believes", and similar expressions or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved, have been used to identify these forward-looking statements. Although the forward-looking statements contained in this Presentation reflect management's current beliefs based upon information currently available to management and based upon what management believes to be reasonable assumptions, the Company cannot be certain that actual results will be consistent with these forward-looking statements. A number of factors could cause events and achievements to differ materially from the results expressed or implied in the forward-looking statements. Forward-looking statements. Forward-looking statements necessarily involve significant known and unknown risks, assumptions and uncertainties that may cause the Company's actual results, events, prospects and opportunities to differ materially from those expressed or implied by such forward-looking statements. Although the Company has attempted to identify important risks and factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors and risks that cause actions, events or results not to be anticipated, estimated or intended, including those risk factors discussed in the Company's public filings. There can be no assurance that the forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those attributes or intended, including those risk factors discussed in the Company's public filings. There can be no assurance that the forward-looking statements are made as of the date of this Presentation, and the Company assumes no obligation to update or revise them to reflect new events or circumstances, unless otherwise req

- estimated resources and reserves:
- planned production and operating costs profiles;
- planned capital requirements; and
 - planned strategies and corporate objectives.

The Company does not make any representations and provides no warranties concerning the accuracy of the projections, and disclaims any obligation to update or revise any forward looking statements/projects based on new information, future events or otherwise except to the extent required by applicable laws

Disclaimers & Compliance Statements

JORC COMPLIANCE STATEMENTS

It is a requirement of the ASX Listing Rules that the reporting of ore reserves and mineral resources in Australia comply with the Joint Ore Reserves Committee's Australasian Code for Reporting of Mineral Resources and Ore Reserves ("JORC Code"). Investors outside Australia should note that while ore reserve and mineral resource estimates of the Company in this document comply with the JORC Code (such JORC Code-compliant ore reserves and mineral resources being "Ore Reserves" and "Mineral Resources" respectively), they may not comply with the relevant guidelines in other countries and, in particular, do not comply with (i) National Instrument 43-101 (Standards of Disclosure for Mineral Projects) of the Canadian Securities Administrators (the "Canadian NI 43-101 Standards"); or (ii) Industry Guide 7, which governs disclosures of mineral reserves in registration statements filed with the SEC. Information contained in this document describing mineral deposits may not be comparable to similar information made public by companies subject to the reporting and disclosure requirements of Canadian or US securities laws. In particular, Industry Guide 7 does not recognise classifications other than proven and probable reserves and, as a result, the SEC generally does not permit mining companies to disclose their mineral resources in SEC filings. You should not assume that quantities reported as "resources" will be converted to reserves under the JORC Code or any other reporting regime or that the Company will be able to legally and economically extract them.

This Presentation contains references to Mineral Resource and Ore Reserves estimates, which have been extracted from the Company's ASX announcements on 8 July 2021 titled "Bellevue Increases Total Resources to 3.0Moz at 9.9g/t" and on 2 September 2021 respectively. See page 53 for a summary of the Project's Mineral Resources and Ore Reserves. This Presentation also contains references to Exploration Results which have been extracted from various ASX announcements dated as indicated throughout this Presentation. For full details of previously announced metallurgical test results, refer ASX announcements on 24 June 2020 titled "Metallurgical Tests Return Exceptionally High Recoveries". The Company notes that these metallurgical results have been updated to correct an immaterial calculation error. While the overall gravity recoveries are still high and there are no material changes in the metallurgical testwork results as the testwork hardness, final tails residue and reagent consumptions remain unchanged) and on 15 April 2021 titled "Global Resource increases to 2.7Moz at 9.9g/t".

The Company confirms that it is not aware of any new information or data that materially affects the information included in the said announcements, and in the case of estimates of Mineral Resources and Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Persons' findings are presented have not materially modified from the original market announcements. The Company first reported the production targets and forecast financial information derived from its production targets in accordance with Listing Rules 5.16 and 5.17 in its ASX announcement on 2 September 2021. The Company confirms that all material assumptions underpinning the production targets and the forecast financial information derived from the production targets continue to apply and have not materially changed.

FINANCIAL DATA

All dollar values are in Australian dollars (A\$ or AUD) unless otherwise stated. The information contained in this Presentation may not necessarily be in statutory format. Amounts, totals and change percentages are calculated on whole numbers and not the rounded amounts presented. The pro forma historical financial information provided in this Presentation is for illustrative purposes only and is not represented as being indicative of the Company's views on its future financial condition and/or performance. The pro forma historical financial information has been prepared by the Company in accordance with the measurement and recognition requirements, but not the disclosure requirements, of applicable accounting standards and other mandatory reporting requirements in Australia.

The BGL Value proposition: Exploiting Our Competitive Advantages

One of Australia's highest-grade gold mines, with exciting exploration potential and an accelerated development timeline that is fully funded to production: "Real People, Real Profits, Real Growth"

CONSTRUCTION TO PRODUCTION

Comparable single asset development companies experienced on average share price appreciation of +163% between announcing the start of construction and reaching commercial production (Slide 8)

GROWTH

Only 50% of the 3Moz BGL
Resource sits within the
1.5Moz mine plan. Further
upside potential from
conversion drilling, low
discovery costs of A\$18/oz
and a resource that has grown
at a CAGR of 81%

GRADE & SCALE

One of the highest-grade, lowest cost mines with an All in Sustaining Cost of A\$1,014/oz; and one of the fastest growing gold developments globally in a Tier 1 mining jurisdiction

PROFITABILITY

The project is forecast to deliver sector leading EBITDA Margins of 66% and A\$1.8b of free cashflow pre-tax (assuming a A\$2,400/oz gold price) over the initial 8.1yr mine life

STRATEGIC ESG FOCUS

Forecast to be the lowest
GHG emitter per ounce on
the ASX with a vision to be
one of Australia's best-inclass 'Green and Gold'
miners and well insulated for
any future carbon tax
legislation

Investment Highlights

The recently completed funding solution now see BGL fully funded into production with total liquidity of \$382m to fund the \$254m capex from FS2 and a budget of \$21m-\$26m for further exploration over the coming 18 months

One of the highest-grade, lowest cost mines in Australia with the first 5 years expected to produce over 200kozpa and a life of mine production of 183kozpa for over 8 years, 1Moz Reserve with grade of 6.1g/t and an All In Sustaining Cost of A\$1,014/oz

Expected to deliver sector leading EBITDA margins of 66% and A\$1.8b of pre-tax free cash flow¹ and will be one of only 8 assets in Tier 1 jurisdictions that produce over 180kozpa at a head grade over 5g/t gold

Significant upside potential with multiple drill rigs turning, low delivery costs of A\$18 per Resource oz and a Resource that is growing at a Compound Annual Growth Rate (CAGR) of 81%; one of the fastest growing gold developments globally in a Tier 1 mining jurisdiction with a future focus of converting the other 1.5Moz (50% of total Resources) that sit outside the current 1.5Moz life of mine

Committed to sustainable mining practices and forecast to be the lowest GHG emitting gold mine on a per ounce basis in Australia, with a vision to be one of Australia's best-in-class 'Green and Gold' miners generating A\$2.3b of economic value

Significantly de-risked with over 3,450m of underground development already completed, 5 independent mining areas by first production and over 464,000m of diamond drilling completed at the project and with simple metallurgy

Fully funded to production with total liquidity of \$382m to fund the dual track strategy of project development and exploration with \$254m capex from the updated FS2 study and \$21m-\$26m budgeted for exploration

The production targets in this Presentation are underpinned by approximately 29.8% Inferred Mineral Resources. There is a low level of geological confidence associated with Inferred Mineral Resources and there is no certainty that further exploration work will result in the determination of Indicated Mineral Resources or that the production target itself will be realised.

Management Team with a proven track record of mine building

GOLD

 The recent hires of Darren Stralow and Bill Stirling from NST have added considerable mine building experience to the BGL team

GM People and Company Culture

Ms. Del Borrello is an experienced Human Resources professional with over 18 years' experience working in Mining HR developing and implementing strategies and initiatives which align with the overall business strategy. Ms. Del Borrello holds a track record of success in managing employee relations issues, the development and management of company culture, employee development and the recruitment and selection process.

Ms. Del Borrello holds a Bachelor of Psychology Degree specialising in Organisational Psychology.

Chief Executive Officer

Mr Stralow is an experienced mining executive and qualified mining engineer with over 20 years' industry experience. He was a member of the senior management team at Northern Star Resources for over 10 years, with roles including head of operations and head of business development during a period of exceptional growth. He has extensive experience in strategy development and execution, building and operating modern underground mining operations, business integration and transformation, and building high performing teams.

Mr Stralow has a Bachelor of Engineering (Mining Engineering) from the Western Australian School of Mines, is a member of the AusIMM and a Graduate of the AICD.

Sam Brooks

Chief Geologist

Mr. Brooks is a geologist with over 17 years of experience in gold and mineral exploration, resource estimation and project development. He led the discovery of the Banfora Gold deposit and was involved in the Bankable Feasibility study. The Banfora deposit is now one of Endeavour Mining's key assets. He has been instrumental in leading geological teams to over 7 million oz of gold discoveries globally.

Mr. Brooks holds a Bachelor of Science degree majoring in Geology, Otago University, with postgraduate geostatistics and is a member of the AIG.

Luke Gleeson

Head of Corporate Development

Mr. Gleeson was previously head of Investor Relations and a Business Development Officer with ASX-listed gold producer Northern Star Resources (NST) for 6 years. During which time the company grew from \$300m to \$14B. At NST he was involved with their asset acquisitions and played key roles in securing over \$1B in equity funding & communicating to the global investment community.

He has a Bachelor of International Finance from Griffith University & Post-Graduate qualifications in Mineral Exploration Geoscience & a Masters of Science (MSc) in Mineral Economics, Western Australian School of Mines and is also a Member of AusIMM.

Maddison Cramer
Joint Company Secretary

Ms. Cramer is a corporate lawyer with broad experience in both the listed and unlisted space, advising entities across a variety of different sectors, but with a focus on mining and resources.

A former Associate at Bellanhouse Legal and HWL Ebsworth Lawyers, Ms. Cramer specialises in corporate and commercial transactions, including capital raisings, IPOs and backdoor listings, and corporate governance issues.

Rod Jacobs
Project Director

Mr. Jacobs is a qualified mining engineer with more than 30 years' operational and senior management experience. In these roles he has overseen major project studies, permitting, site operations, merger and acquisition activity, and project management. In his previous roles Mr. Jacobs led the transition of the Deflector gold-copper project into full operation. During his time as Development Manager at Independence Group (ASX:IGO), Mr. Jacobs managed the optimisation study which resulted in a 30 per cent increase in project NPV.

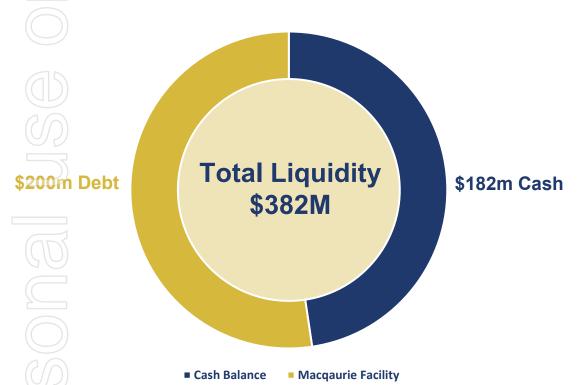

Amber Stanton
General Counsel and Joint
Company Secretary

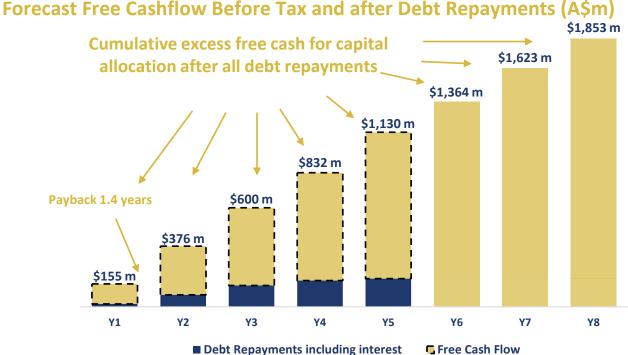

Ms. Stanton is a corporate lawyer and was appointed as General Counsel / Joint Company Secretary in July 2021. Prior to joining Bellevue, Ms. Stanton was General Counsel / Company Secretary at Resolute Mining. Prior to that Role Ms. Stanton was a partner at two international law firms, specialising in mergers and acquisitions, capital markets, energy and resources and general corporate and commercial matters. Ms. Stanton was the WA winner of the 2011 Telstra Business Women's Award (Corporate and Private Sector).

Bellevue gold project - Fully funded to production

- Fully funded to production with total liquidity of \$382m to fund the dual track strategy of project development and exploration GOLD with \$254m capex from the updated FS2 study and \$21m-\$26m budgeted for exploration
- Macquarie was Bellevue's first institutional investor and has elected to take the majority of upfront fees in Bellevue shares
- Due to the forecast strong free cash flow generation, Bellevue will be in the enviable position to be able to consider capital allocation decisions early in the project's mine life of; further aggressive exploration, retaining cash on balance sheet or distributing to shareholders

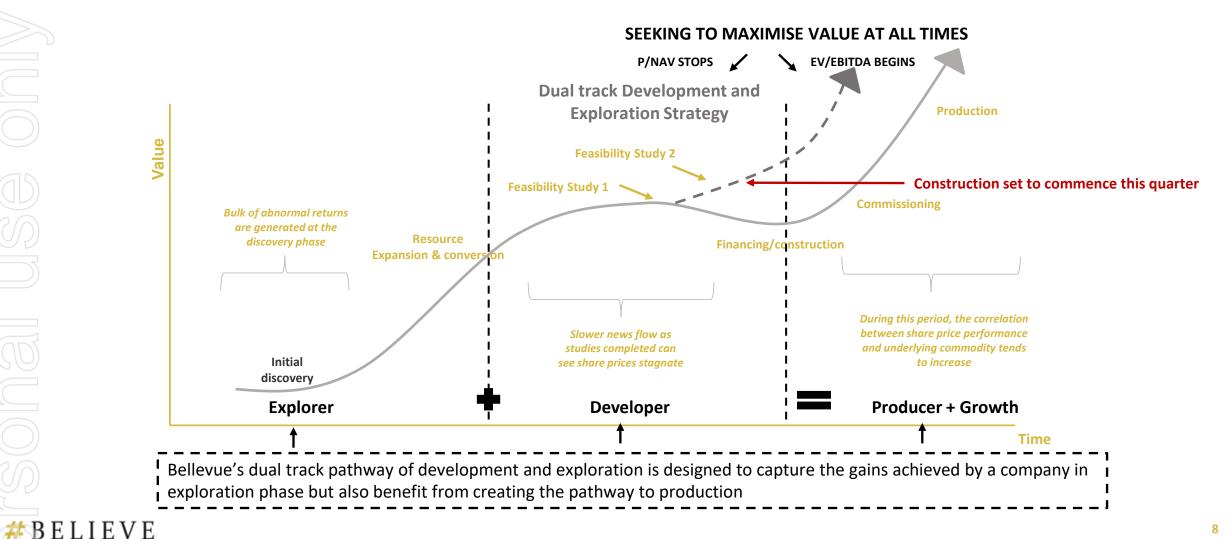

Outcomes are based on Feasibility Study 2 results and assumes A\$2,400/oz gold price as per the results from the Feasibility Study document

Dual track strategy delivering Value with the FS2 study

GOLD

- Bellevue's dual track strategy of exploration and a pathway to production continues to unlock value
- In only 6 months FS2 has added A\$701m, or a 65% increase in free cash flow and increased the IRR to 72% (pre-tax)
- Further exploration will continue to add value towards the pathway to production

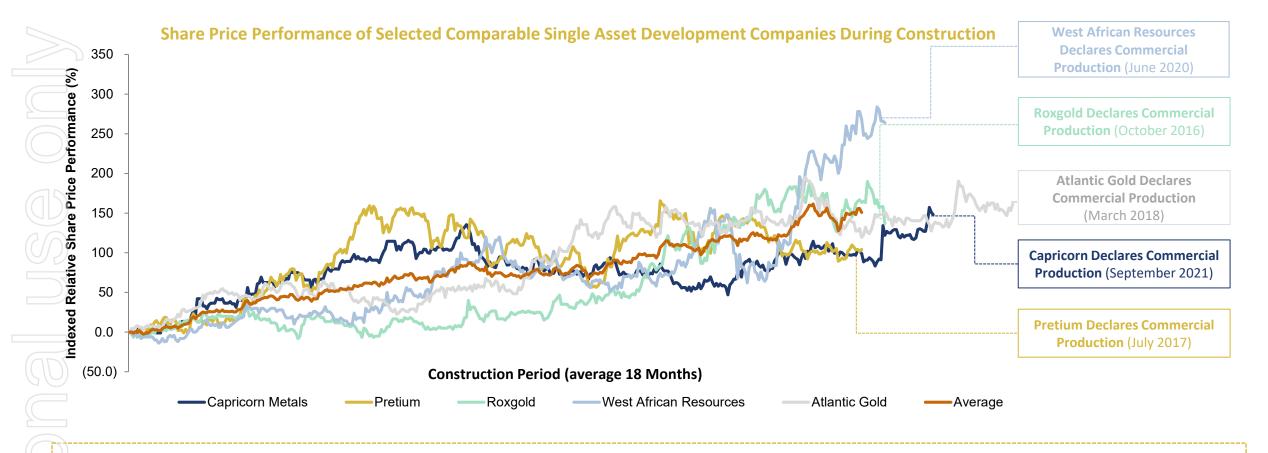

BGL on the cusp- Share Price Performance During Construction

 Post the announcement of construction development, the selected comparable companies experienced a significant rerate or an average increase of 163% over this period

Single asset development companies experienced on average +163% share price appreciation between announcing construction and reaching commercial production

Source: Company Filings, Bloomberg. Notes: See slide 26 for backing data

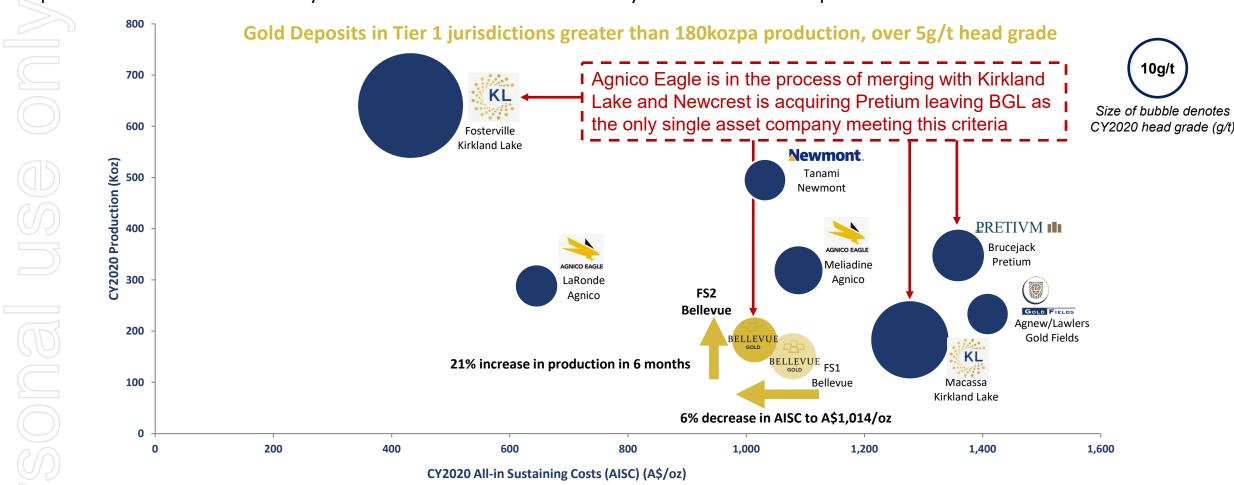

BGL joining an exclusive gold club

DELLEVILE

GOLD

- There are only 7 other assets globally in Tier 1 jurisdictions that produce over 180kozpa with a head grade over 5g/t
- FS2 will see the project produce over 200kozpa for the first 5 years and a LOM average of 183kozpa for 8.1 years
- Further Resource conversion and Resource growth will also see the potential for the project to continue to grow the production and mine life as only 50% of the 3Moz Resource currently sits within the mine plan

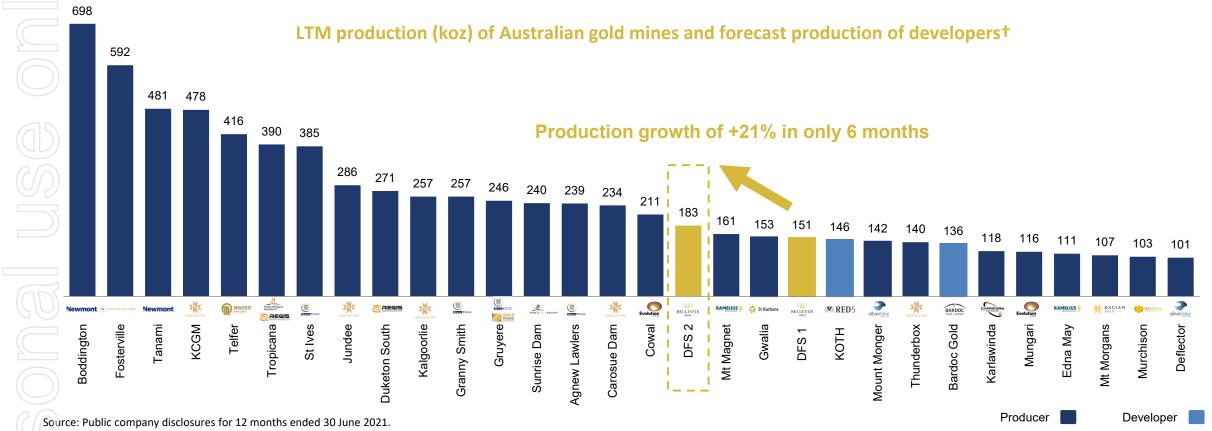

BGL – Forecast to become a Top 20 Australian gold mine

GOLD

- The updated Stage 2 Feasibility Study shows BGL is forecast to enter the Top 20 largest producing gold mines in Australia
- 21% uplift in LOM average production compared to the Stage 1 Feasibility Study released in February 2021
- BGL is forecast to average 200koz pa of production over the first five years and 183koz pa over the LOM

Note: Companies with production below 100koz and / or a material by-product credit were removed for comparison purposes.

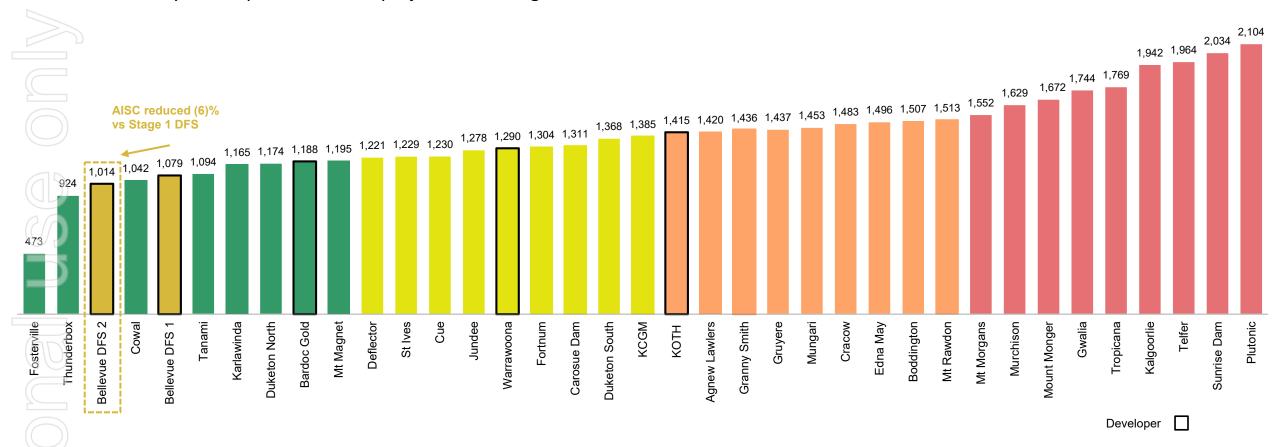

† Companies that have released a PFS or Feasibility study with LOM Average production used for comparison purposes.

BGL – Forecast to enter the bottom quartile on AISC vs peers

- The Stage 2 DFS positions BGL in the bottom cost quartile with a forecast LOM All In Sustaining Cost (AISC) of A\$1,014/oz
- In the first 5 years of production the project will average an AISC of A\$922/oz

Source: Public company disclosures for 12 months ended 30 June 2021.

[†] Companies that have released a PFS or Feasibility study with LOM Average AISC used for comparison purposes.

FS2 vs FS1 – adding immediate value to the project

Stage 2 Study delivers a significant improvement in all key project metrics, including production, life of mine, costs, free cash flow, profit and return metrics; all without a material change in capital costs

Key LOM Production Statistics	FS1	FS2	Δ
Life of Mine	7.4 years	8.1 years	+9%
Ore tonnes mined	5.6Mt	8.1Mt	+45%
Ore processing rate	750,000tpa	1,000,000tpa	+33%
Average gold production (recovered) – years 1 - 5	160koz per annum	200koz per annum	+25%
Average gold production (recovered) – LOM	151koz per annum	183koz per annum	+21%
Recovered gold	1.1 Moz	1.5Moz	+36%
Pre-Production Capital Costs			
Feasibility Start Date (construction and development spend)	January 2022	July 2022	n/a
Pre-production capital costs	A\$255m	A\$252m	(1%)
Pre-production contingencies	A\$14m	A\$15m	+7%
Total capital costs (included in study)	A\$269m	A\$267m	(1%)

Key LOM Financial Statistics	FS1	FS2	Δ
Gold price	A\$2,300/oz	A\$2,400/oz	+4%
Free cash flow (FCF) sensitivity to \$100/oz variation in gold price	A\$100m	A\$140m	+40%
Revenue	A\$2,551m	A\$3,554m	+41%
All in sustaining costs – LOM	A\$1,079/oz	A\$1,014/oz	(6%)
Cost escalation factor (annualised)	n/a	6.6%	+7%
Net free cashflow (pre-tax)	A\$1,081m	A\$1,782m	+65%
Net free cashflow (post-tax)	A\$795m	A\$1,289m	+62%
Average free cashflow (pre-tax) - LOM	A\$171m	A\$259m	+51%
EBITDA – LOM	A\$1,648m	A\$2,412m	+46%
Payback period (post-tax)	1.7 years	1.4 years	+19%
NPV _{5%} (pre-tax)	A\$876m	A\$1,311m	+50%
NPV _{5%} (post-tax)	A\$562m	A\$943m	+68%
Internal Rate of Return (pre-tax)	58%	72%	+24%
Internal Rate of Return (post-tax)	35%	62%	+74%

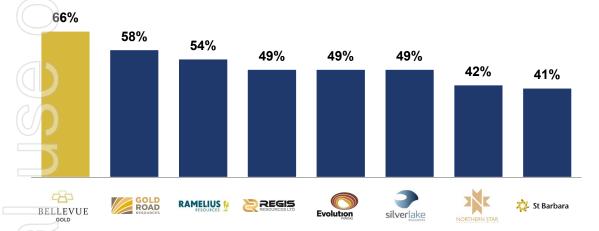

BGL – Forecast to deliver sector-leading financial returns

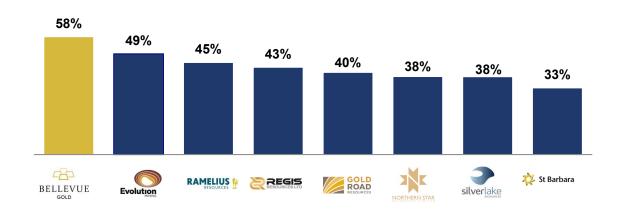

- BGL's production is forecast to commence in FY23 and set to deliver sector-leading profitability compared to its ASX listed peer group
- BGL will be leading the peer group in EBITDA Margin and AISC margin on a per ounce basis

LTM EBITDA Margin vs BGL LOM EBITDA Margin %

LTM AISC Margin vs BGL LOM AISC Margin * %

Source: Public company disclosures for 12 months ended 30 June 2021 or 31 December 2020 where FY21 full year data was not available. Bellevue EBITDA margin based on gold price of A\$2,400/oz.

AISC Margins derived from gold price of A\$2,400/oz consistent with the base case assumption in the Bellevue Gold Project Stage 2 Feasibility Study.

FS1 vs FS2 - What's Changed?

BELLEVIIE

Key de-risking events achieved on the project since underground activities commenced

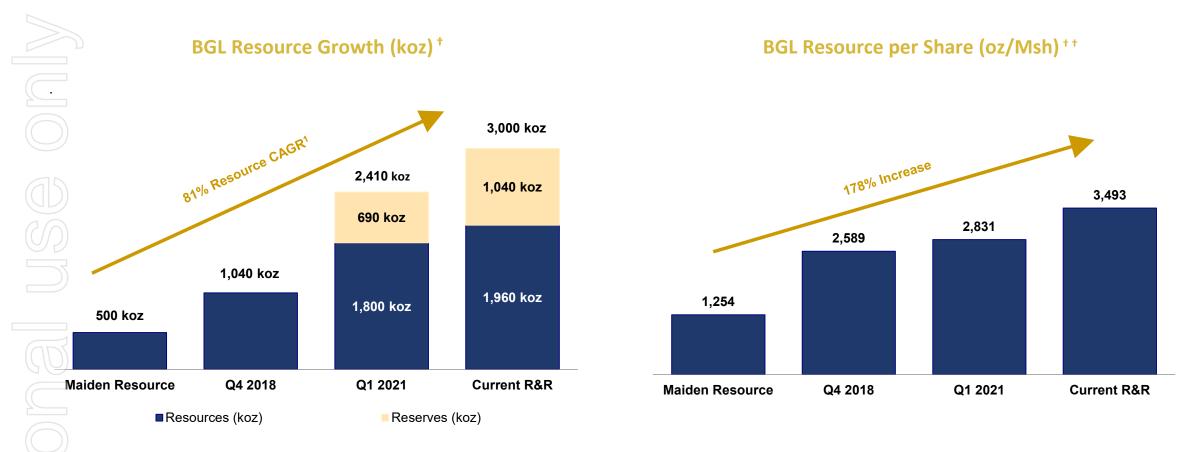

Study Parameters	FS1	FS2	Outcome
Mill Size	750 ktpa	1 Mtpa (and repriced)	33% Improvement
Independent Mining Areas	Three areas and 21 fronts	Five areas and 16 fronts	Decreased risk with additional production areas available
Advance Rates	250 m/month	250 m/month	17% below industry avg
Trucking Rates	90,000 tkms/month	90,000 tkms/month	18% below industry avg
Bogging Rates	830 t/day	830 t/day	16% below industry avg
Development completed	1,000m	2,700m	170% Increase
Development oz mined	28% (~308koz)	25% (~375koz)	22% Increase
Sub Vertical Lodes oz mined	54% (~596koz)	62% (~929koz)	56% Increase
Sub Horizontal Lodes oz mined	18% (~196koz)	13% (~196koz)	No Change
Mining cost Escalation	N/A	6.6% (annualised)	6.6% increase
Diamond Drilling Rates	35 m/shift	UG achieving 53 m/shift	58% above industry avg
Total Drill Meters	330,000m	404,000m	22% Increase
Reserve Modifying Factors	No Change	No Change	No Change

A Resource that continues to grow rapidly

 Since the discovery hole in November 2017, the Resource has grown at a compound annual growth rate of 81% at a discovery cost of A\$18/oz

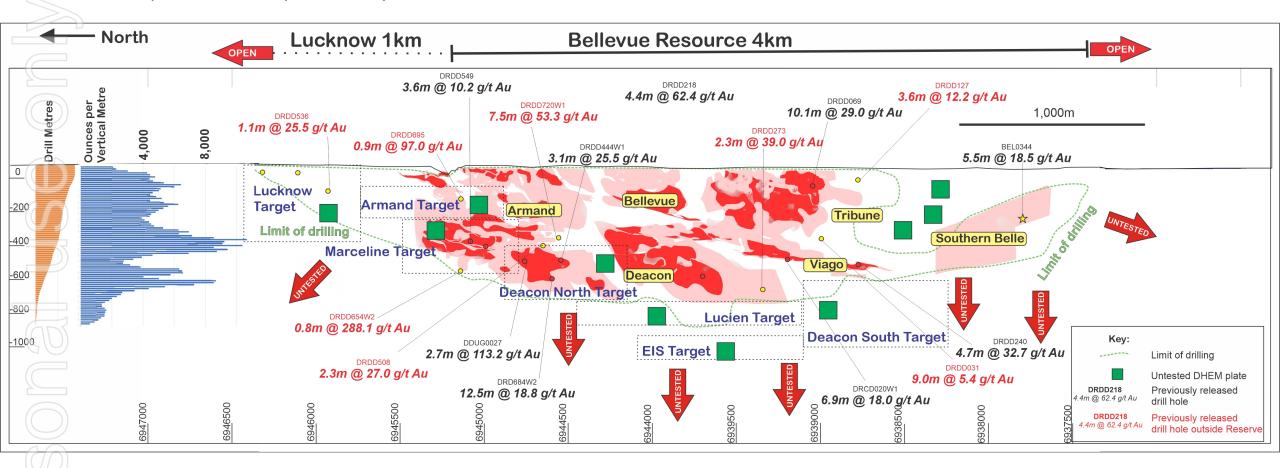

[†] Resources are reported inclusive of Reserves. Refer to page 53 for the current breakdown of Inferred and Indicated Resources. † Shares on issue based on pre-raising unadjusted issued capital.

A deposit that continues to grow in every direction

- Since the Tribune discovery hole in November 2017, the Resource has grown at a compound annual growth rate of 81%
- GOLD
- The recent Lucknow discovery extends the strike to over 5km and the Lucien discovery sits 300m beneath the Deacon lode;
 and the deposit remains open in every direction

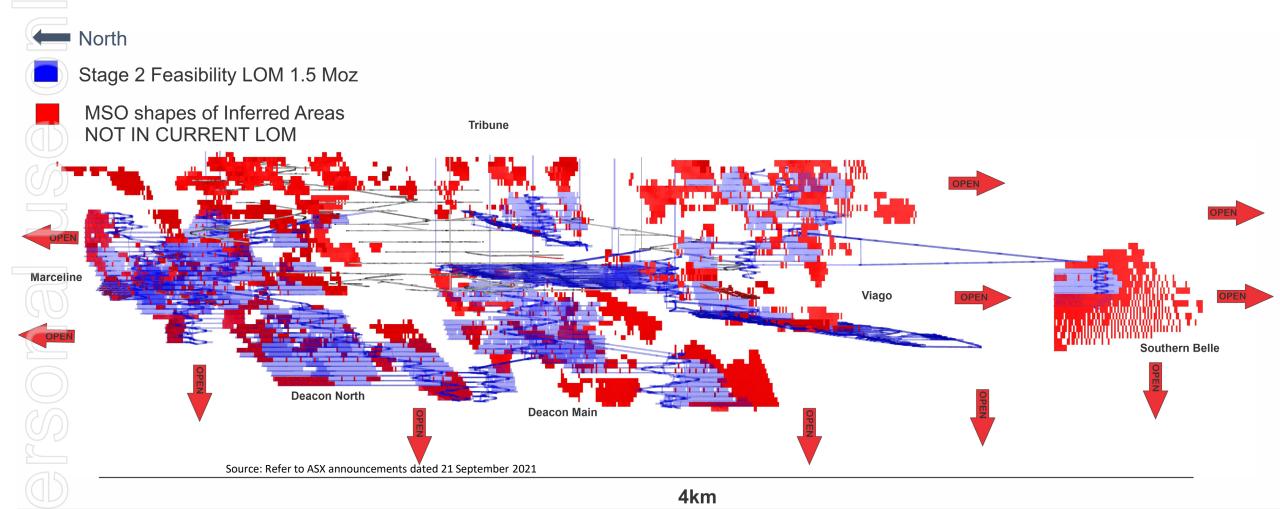

Further growth potential- Mining Shape Optimiser shapes NOT currently in mine plan

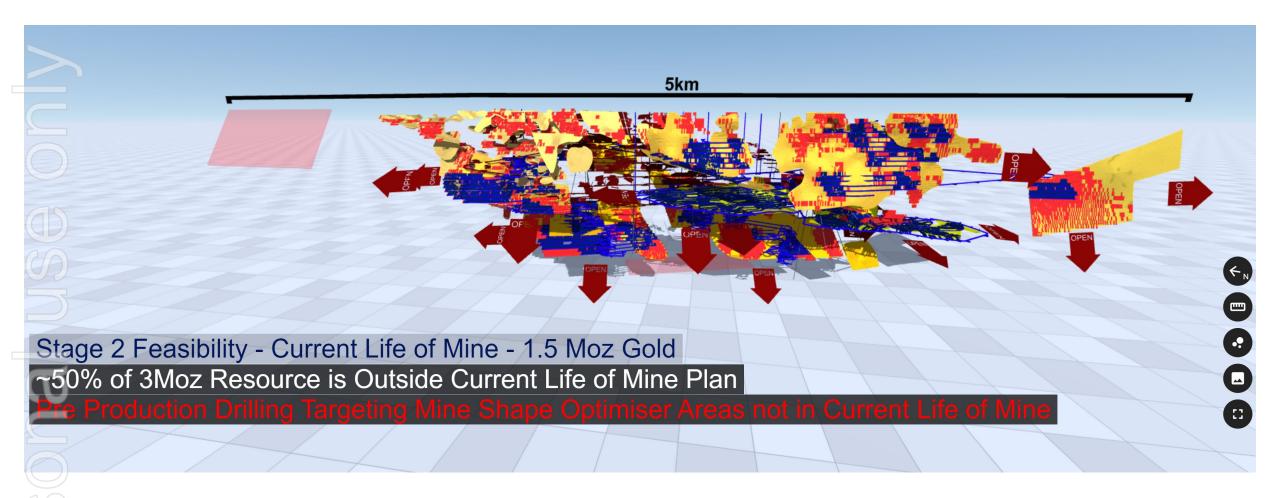

- Of the 3Moz Global Resource only 50% of the Resource is in the current 1.5Moz mine plan
- The areas in red highlight the immediate conversion potential based on the same economics from the Stage 2 Feasibility Study
 that are forecast to be converted into the mine plan with further infill drilling to convert to the Indicated category
- The entire system remains open in every direction and drilling will continue over the pathway to production

Bellevue Gold Project Fly-through Click Here

BGL - Forecast to be Australia's lowest greenhouse gas emitter/oz

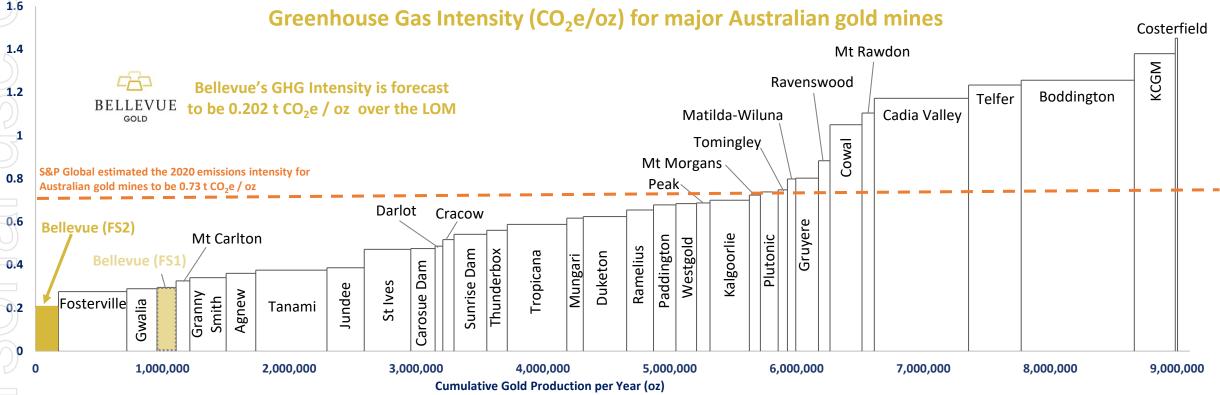

BELLEVUE a GOLD

- Bellevue is forecast to become the <u>lowest emitter</u> on a per ounce basis in Australia; the Stage 2 Feasibility Study shows a forecasted greenhouse gas intensity of 0.202 t CO_2e / oz. This has improved by ~30% due to the planned integration of renewable energy and the increased plant throughput to 1 Mtpa
- Bellevue is forecast to have the <u>least total Scope 1 emissions</u> of any major off-grid gold mine in Australia and to have one of the cleanest power supplies for any gold mine in Australia

GHG Intensity (t CO₂e / oz Au)

For the same carbon emissions, Bellevue is forecast to produce 3.6 ounces compared to 1 ounce for the average Australian gold mine

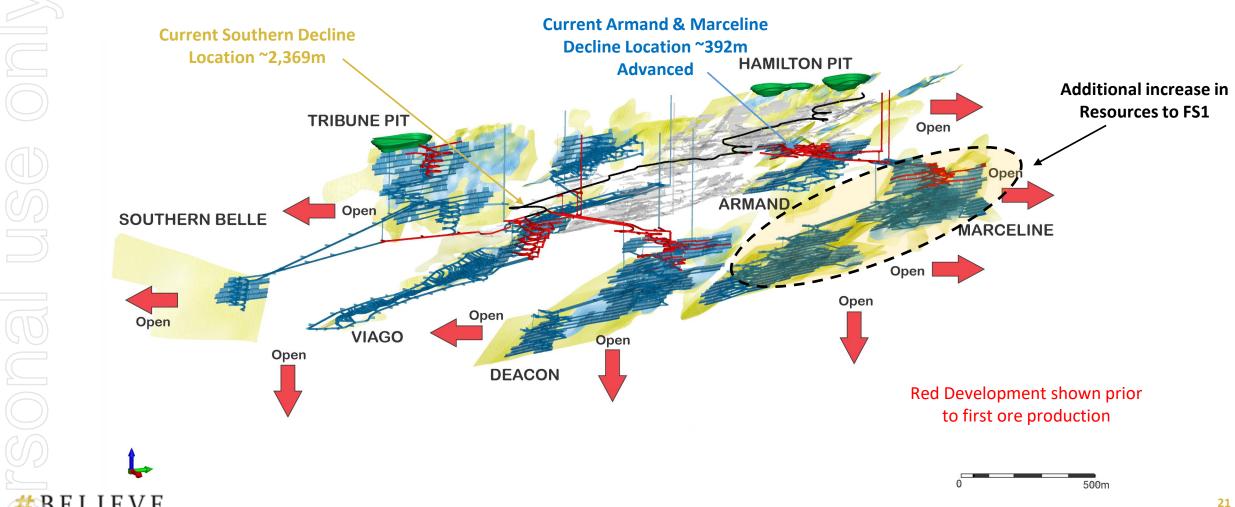

Development & de-risking continues a rapidly growing Resource

Marceline and Tribune) with the total $\frac{A$1,502m}{A}$ of capital and operating costs incorporated into the $\frac{A$1,014/oz}{A}$ AISC

GOLD

- Over 3,450m of development has occurred to date; the study incorporates A\$12m of grade control pre-production and A\$55m LOM
- The 3Moz deposit remains open in every direction and underground infrastructure will allow for further underground exploration

A consistent delivery of the project since July 2020

The company is continually delivering into the dual track development and exploration strategy by adding value through growth in the Resource and an upgraded study that has increased the value of the project by \$701m in 6mths

Positioned for high margin, low capital intensive growth beyond 1Mtpa

- The current 1Mtpa plant was designed for the potential for further growth above 1mtpa nameplate capacity
- The 33% upscaling to 1Mtpa from 750ktpa nameplate capacity was achieved for a total spend of \$12m

Processing Plant

- Total LOM recoveries forecasted at 96.7%
- Process plant designed to recover high gravity component at the front end. Test work indicates between 58% and 85% is recoverable through gravity recovery methods.
- Cyanide destruction circuit designed and costed to meet Global Tailings Standards
- Designed for 1.0Mtpa opportunity to increase throughput as design has allowed for readily expandable growth
- Simple process flow sheet:
 - 3 stage crushing
 - Single ball mill grinding, p₈₀ @ 75um
 - Gravity separation and intensive leaching
 - o Thicken prior to leaching with standard CIL processes
 - Thicken final tail with cyanide detoxification
 - Transfer to TSF (which has been located away from lake)
 - Recover water from TS

Plant Upgrade designed for future growth

- A\$12m expansion to 1Mtpa from 750ktpa
- Possible future expansion above 1Mtpa planned for in infrastructure design layout

BGL – Lowest capital intensity vs global developer peer group

BGL's capital intensity of A\$1,459/oz ranks it as the least capital intense development gold projects of scale

Source: All data sourced from public company disclosures. Developers' production and capital cost forecasts were based off the most recent publically disclosed study. Capital intensity calculated by dividing preproduction development capex by average LOM annual gold production.

BGL – FS2 delivers substantial production growth

- Updated Stage 2 Feasibility Study provides for a forecast production increase of 21% over the life of the project
- Significant increase to production demonstrated within six months of previous study, with significant cashflow generation from year 2 and a production profile of 200koz in the first 5 years at an impressive A\$922/oz AISC and LOM of A\$1,014/oz

Feasibility Study 1 & 2 Production (koz)

Source: Bellevue Gold Project Stage 1 & 2 Feasibility Studies.

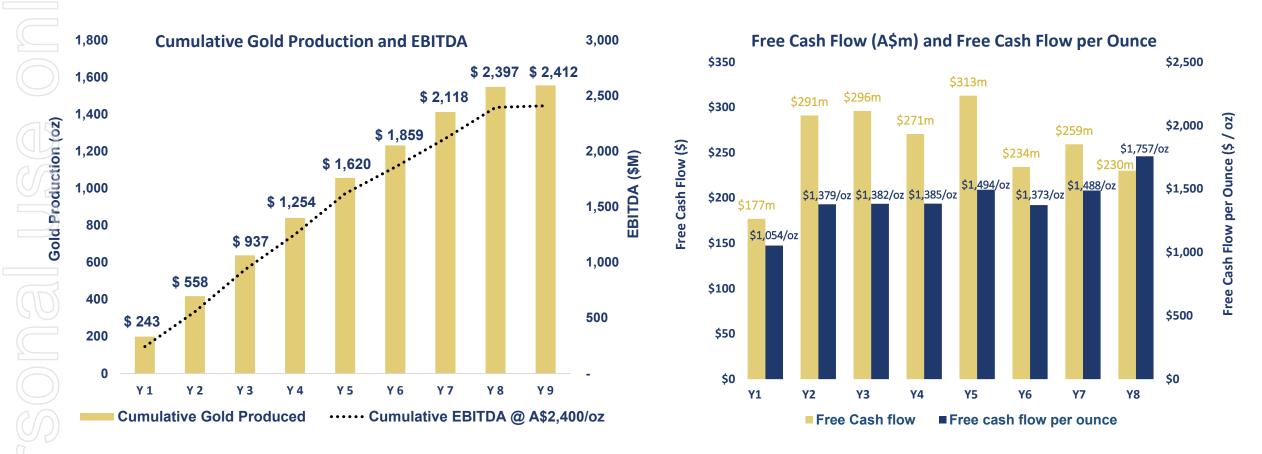

Outstanding forecast EBITDA and free cash flow generation

The Bellevue mine design and project has been optimised on profitability and free cash flow and not grade and the project generates an average LOM FCF/oz of A\$1,405/oz (pre tax and post commissioning)

Pre-tax and at a spot gold price scenario of A\$2,400/oz, the project delivers consistent earnings of over A\$2.4b at an EBITDA Margin of 66% over life of mine

A Robust, Independent Feasibility Study

Fully Funded to Production

Pre-Production Capital Expenditure (A\$M)				
Site and Sustaining Capital	66			
Processing Plant	82			
Open Pit	14			
Underground ¹	132			
Capitalised operating costs	19			
Capitalised revenue	(61)			
Sub Total	252			
Contingency ²	15			
Total	267			

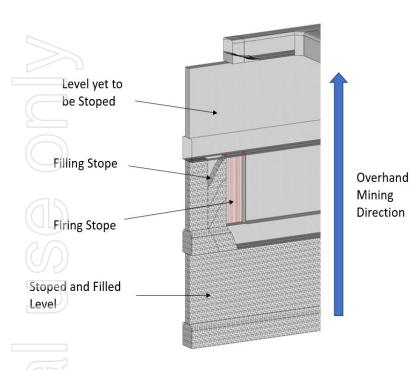

Variations to FS1 include optimisation of underground capital development designs, removal of evaporation ponds and inclusion in tailings storage facility, increase in processing facility capital costs, optimisation of OP designs, increased capitalised revenue generation. Six-month difference in start date of feasibility requires early works to continue with exploration development.

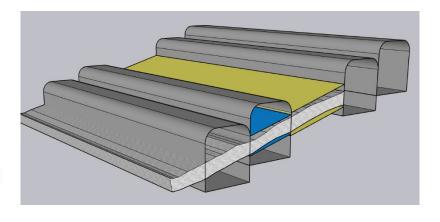

- (1) No contingency applied to the underground mining costs as mining costs have been escalated by an annualized rate of 6.6%.
- (2) A\$8.8m of contingency is applicable to the processing plant (10.6%) and A\$6.4m (11.6%) of contingency relates to site capital.

Conventional mining methods

Operations with similar mining methods

- Sub Vertical: Whirling Dervish (Northern Star),
 Wattle Dam (Ramelius), Andy Well (Latitude)
- Sub Horizontal: Wallaby (Goldfields), Golden Age (Wiluna), Miitel (Mincor)

Sub Horizontal Lodes (13% LOM Ounces)

- Areas with footwall dips < 45° utilise a modified cut and fill method with sub level stoping
- Primary development is driven along strike of the ore zones, the ore is then stripped out (up to 4.2m)
- The primary drive is filled with CRF as high as practical to support the wall of the secondary development drive
- The ore is then stripped out using long hole techniques (up to 8m) into the secondary drive
- High pressure mechanical washing of the stripped out foot wall will be employed to ensure high recovery rates
- A reduced mining recovery has been applied to this mining method (85%)

Sub Vertical Loades (62% LOM Ounces)

- Areas with footwall dips > 45° utilise long hole open stoping with placement of consolidated rock fill (CRF) for support
- An underhand method will be employed, stopes are opened up with a slot and blasted ore is bogged to a level stockpile. CRF is placed in the void from the level above and the next firing occurs against the still curing material

Development (25% LOM Ounces)

- Sourced from both sub vertical and sub horizontal mining areas
- Highly productive source of ore tonnes available from multiple mining fronts providing consistent delivery of material to surface ROM Pad

Project Operating Costs

Operating Costs (post-production)	A\$M	A\$/T Milled	A\$/oz Produced		
UG & OP Mining	649	81.99	438		
Grade Control	58	7.29	39		
Processing	241	30.40	162		
G&A	72	9.05	48		
Royalties	165	20.84	111		
Sub Total	1,185	149.57	799		
Sustaining Capital (captured in AISC)	316	40.56	217		
Total	1,502	190.13	1,016		

The A\$2/oz difference between total operating costs and AISC relates to stockpile movements at the commencement of commissioning and AISC does not include closure costs. The associated AISC is A\$1,014/oz

Operating Costs

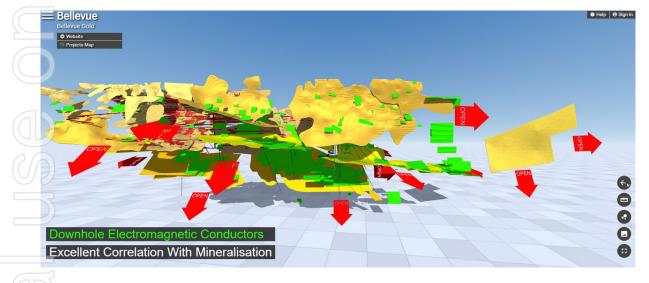

- Underground & Open Pit Mining Rates supplied by competitive Request for Quotation (RFQ) processes. Costs include recovery of ore and delivery to surface ROM Pad, associated ground support and backfilling and ancillary services including movement of waste to stockpiles.
- Grade Control includes two dedicated rigs and all associated costs for sampling, assaying and consumables.
- Processing— includes all power, maintenance spares and materials, reagents and consumables, labour (including technical and direct management support) and other minor miscellaneous allowances.
- G&A includes all site management, accommodation and travel, light and heavy vehicles, communications and IT and site compliance and licencing charges.
- Royalties Includes WA State Government royalty of 2.5% and an additional third-party royalty was also applied based on existing agreements.

Board of Directors

Kevin Tomlinson

Executive Independent Chairman

Mr Tomlinson has over 30 years' experience in Mining & Finance with Toronto, Australian and London stock markets. He was previously MD of Investment Banking at Westwind Partners / Stifel Nicolaus.

Kevin is an experienced geologist and has, extensive experience in development, financing & operations of mining projects internationally a well as Mergers & Acquisitions.

Previous Directorships include Centamin
Plc where he was involved in the
construction of the mine and also Orbis
Gold, and Non-Exec Chairperson of ASX /
TSX Cardinal Resources.

Kevin is Chair of Bellevue's Health, Safety and Sustainability Committee and a member of the Nomination and Remuneration Committee and Audit & Risk Management Committee.

Steve Parsons

Managing Director

Mr Parsons is an experienced geologist with a proven track record of mineral discoveries and corporate growth with ASX listed companies.

Steve has previously worked for major mining groups including CRA Exploration and Placer Dome. Prior to joining Bellevue Steve was Managing Director and founder of Gryphon Minerals Ltd which grew to an ASX-200 company and was subsequently acquired by a significant North American gold producer. The Banfora project is now one of Endeavour Mining's cornerstone assets.

Steve has also advised a number of other ASX resource companies over the years and has an Honours Degree in Geology from the University of Canterbury.

Fiona Robertson

Non-Executive Independent Director

Ms. Robertson has more than 40 years' experience in corporate finance. She has worked previously for The Chase Manhattan Bank in London, New York & Sydney, and as CFO of ASX-listed Delta Gold Ltd. She is currently a non-executive Director of ASX-listed Whitehaven Coal Ltd and 29Metals Ltd.

Fiona was named 2017 Gender Diversity Champion in Australian Resources by 'Women in Mining & Resources National Awards' & 2017 Gender Diversity Champion in NSW Mining in the NSW Minerals' Council's Women in Mining Awards.

Fiona is Chair of Bellevue's Audit & Risk Management Committee and a member of the Nomination and Remuneration Committee and Health, Safety and Sustainability Committee.

Shannon Coates

Non-Executive Independent Director

Ms. Coates has more than 25 years' experience in corporate law, compliance and the provision of corporate advisory services to publicly listed companies across a variety of industries. Shannon is a qualified lawyer, Chartered Secretary & graduate of the AICD's Company Directors course.

She is a past recipient of the West Australian Women in Mining scholarship and was selected for the AICD Chairman's Mentoring Program.

Shannon is company secretary to a number of ASX-listed companies, including Mincor Resources NL and ASX-200 Nearmap Limited. She is also a Non-executive Director of ASX-listed Vmoto Ltd.

Shannon is Chair of Bellevue's Nomination and Remuneration Committee and a member of the Audit & Risk Management Committee.

Michael Naylor

Executive Director

Mr Naylor has 24 years' experience in corporate advisory & public company management since commencing his career & qualifying as a chartered accountant with EY.

Michael has been involved in the financial management of resources-focused companies serving on the board and in the executive management team focusing on advancing and developing mineral resource assets and business development.

Michael has previously worked in a senior finance position at ASX listed gold producer Resolute Mining, as CFO of ASX listed gold producer Dragon Mining and ASX listed Gryphon Minerals. Michael has extensive experience in financial reporting, capital raisings, debt financings and treasury management of resource companies.

Tier 1 location in world-class gold belt

Bellevue has Major Landholding of Over 2,780km²

Excellent infrastructure:

- Services at Leinster, Leonora and Wiluna
- Daily flights Perth to Leinster (only 40km south)
- Sealed roads
- Water
- Close proximity to grid power

Historically significant producing region:

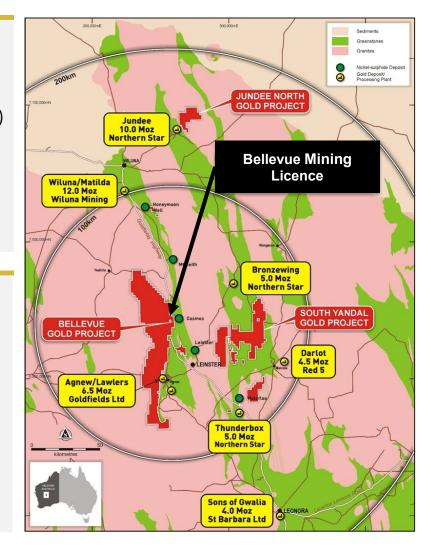

- Major gold deposits & producing gold mines in proximity to Bellevue's Projects (Agnew Gold Fields, Jundee NST, Thunderbox NST, Gwalia SBM)
- Wiluna Belt endowment second only to Kalgoorlie globally (+40Moz endowment)
- Bellevue has major landholding of over 2,780km²

Globally recognised Tier 1 mining jurisdiction:

- Western Australia ranked Top 4 in Fraser Institute 2020 Mining Investment Attractiveness Index
- Significant mines, infrastructure, Local & Government support for mining

Past production with outstanding geology:

- Granted Mining Licenses
- Previously produced ~0.8Moz at ~15g/t gold between 1987 and 1997
- Underexplored and undeveloped for over 20 years
- Excellent gold recoveries from recently released testwork averaging 97.3% and gravity recoveries from 58% - 85%

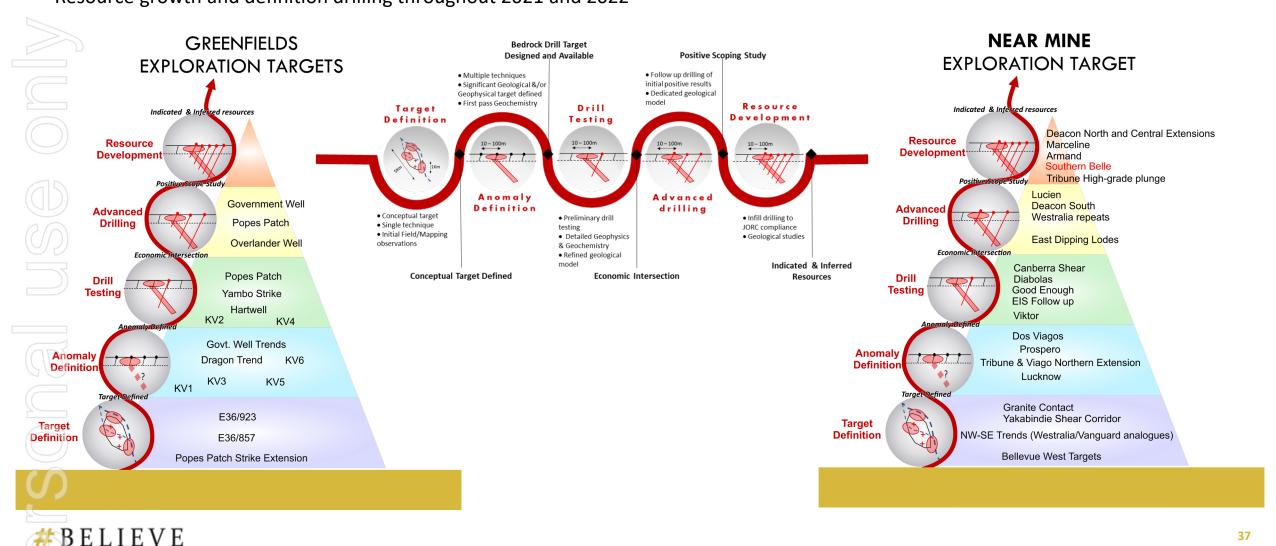

A\$21-26m exploration budget: An organic pipeline of growth

Bellevue discovery to resource growing at a compound annual growth rate of 81%. Armand Lode discovered August 2020, Marceline Lode discovered recently post the first Feasibility Study, multiple advanced targets ready for further Resource growth and definition drilling throughout 2021 and 2022

Bellevue's economic contributions to society to grow with FS2

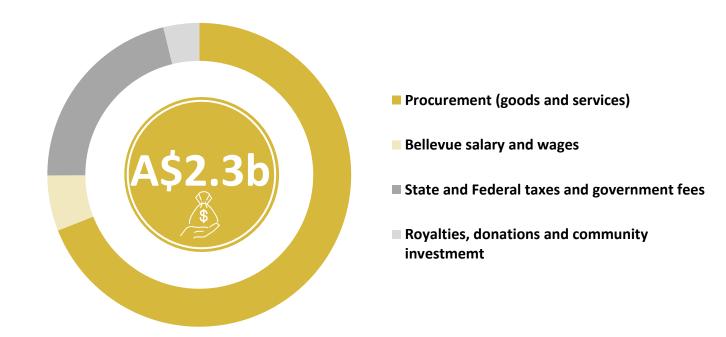

- Since the 'discovery hole' in November 2017, Bellevue has injected over A\$88m into the Australian economy
- During construction and operation, our Stage 1 Feasibility Study forecasts to generate A\$2.3 billion into the economy, including capital and operating expenditure, such as goods and services procured, taxes and fees (incl. corporate tax, payroll tax, tenement rent and rates), royalties, employee salaries, donations and community contributions
- BGL is forecast to employee up to 380 personnel over construction and 275 on a steady-state basis

Over our Life of Mine, we project to provide

A\$2.3b

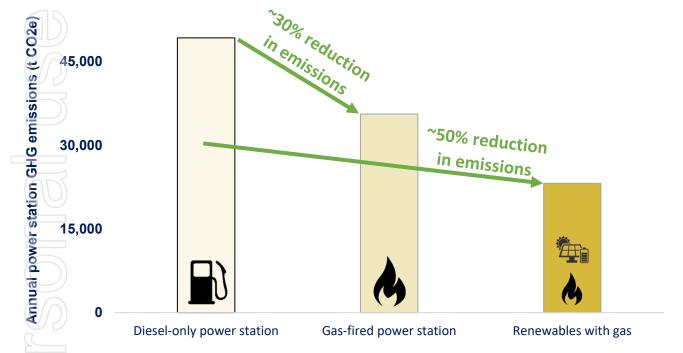

in economic contributions

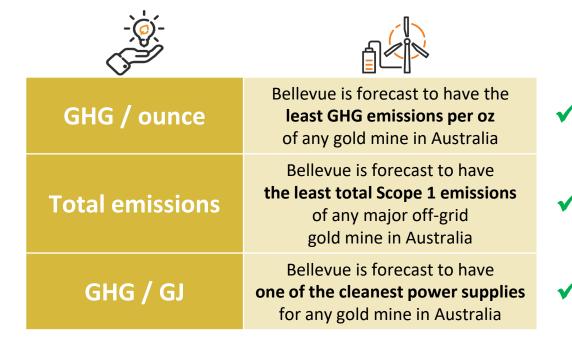

BGL's approach to ESG = no greenwashing

- Our Stage 1 Feasibility Study estimated that the gas power station would contribute 73% of the mine's overall emissions
- The latest plans for the Bellevue power station will further reduce emissions, whilst maintaining reliability and meeting power demands
- Current plans are based around a substantial emission reduction compared to gas-only; and a ~50% emission reduction compared to diesel
 - Over 90% of water used is from hypersaline underground water (an uncontested resource). No water will be discharged to the environment
 - Bellevue is forecast to be a low-water consumption mine, at ~0.6 m³ of water consumed per tonne processed which is leading-practice
- Climate change is a serious consideration; hence Bellevue is taking a science-based approach to reducing emissions and mitigating impacts

ESG & the opportunity to be 'best in class' corporate citizens

BELLEVUE

BGL is evaluating all options on the pathway to development

- Smart blasting ✓
- Energy efficient grinding √
- Running compressors at full load and with cooler air intake
- Waste heat recovery
- Variable speed drive motors/high efficiency motors √
- Improving driver practices √
- Automation √
- Maintenance procedures ✓

Efficiency

- Use of renewable electricity (eg. solar, batteries) to power operations √
- Using battery-powered electric vehicles instead of petrol, diesel or gas-powered vehicles
- Future consideration: aboveground hydrogen powered haul trucks √

Fuel switching

Climate consideration examples:

- Bushfires √
- Flooding √
- Groundwater scarcity ✓
- Heatwaves 🗸

General efficiency considerations:

- Internal and external lighting √
- HVAC optimisation
- Building design

New infrastructure

Bellevue is undertaking further assessments to identify additional risks and opportunities and develop best business cases

Bellevue is an industry leader in diversity

Bellevue has a Cultural Heritage Management Plan and a Diversity Policy

- Bellevue is leading the Australian mining sector for gender diversity and has a 0% gender pay-gap for like-for-like roles
- Key metrics of our diversity results include:
 - \circ **40%** female directors, which is well above the WGEA mining sector average¹ of 19.6% \checkmark
 - \circ 35.7% females in leadership positions, which is well above the WA mining sector average² of 22% \checkmark
 - \circ 48% female employees, which is well above the WGEA mining sector average¹ of 18% \checkmark
- We are maintaining strong relationships with Traditional Owners, such as through employment and providing Cultural Awareness training to our staff.

 Bellevue's employment percentage of Aboriginal and Torres Strait Islanders people is 6.4%, which is 36% above the WA mining industry average² of 4.7%

Why Bellevue?- Click Here

Values and Vision

"To create a standout gold mining and exploration company that is an industry benchmark"

At Bellevue we believe we have a unique opportunity to develop a standout gold mining company that is the benchmark for others to be measured against. We believe our four key values are fundamentally important to the success of Bellevue. These values underpin the standards that we hold each other accountable to each and every day

PASSION

Each day we will pursue our mission with passion and belief – a fierce determination to succeed and an excitement about what we do.

ACCOUNTABILITY

We are all accountable for our success – our people, our community and our stakeholders. We will always act with the highest level of integrity and respect to sustainably grow Bellevue.

COMMUNITY

The health, safety and wellbeing of our community is critical to our success. This includes respect for our people, stakeholders and the environment.

EXCELLENCE

We aim for the highest standards of performance, behaviour and conduct in everything we do and support everyone in our team to achieve this in everything they do.

The sustainability pathway - a vision to be best in class

Bellevue's leading commitment on efficient energy use

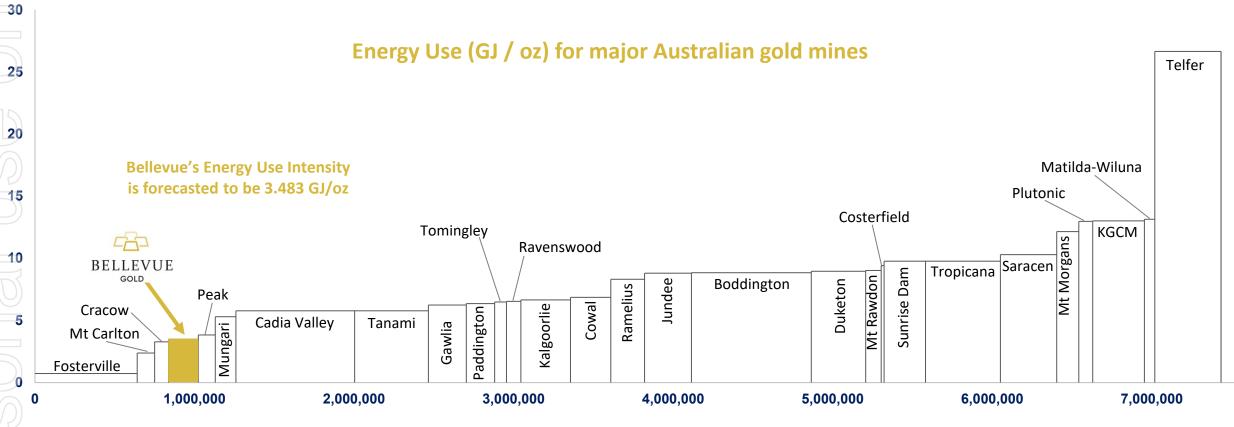

The Bellevue Gold Project has been designed to optimize energy use and reduce environmental impact

Energy Intensity (GJ / oz Au)

#BELIEVE

Modeling places the project as of one of the most efficient gold mines, based on forecast energy use (GJ) per ounce produced
 Since the Stage 1 Feasibility Study, our forecasted energy intensity has improved from 5.108 GJ/oz to 3.483 GJ/oz

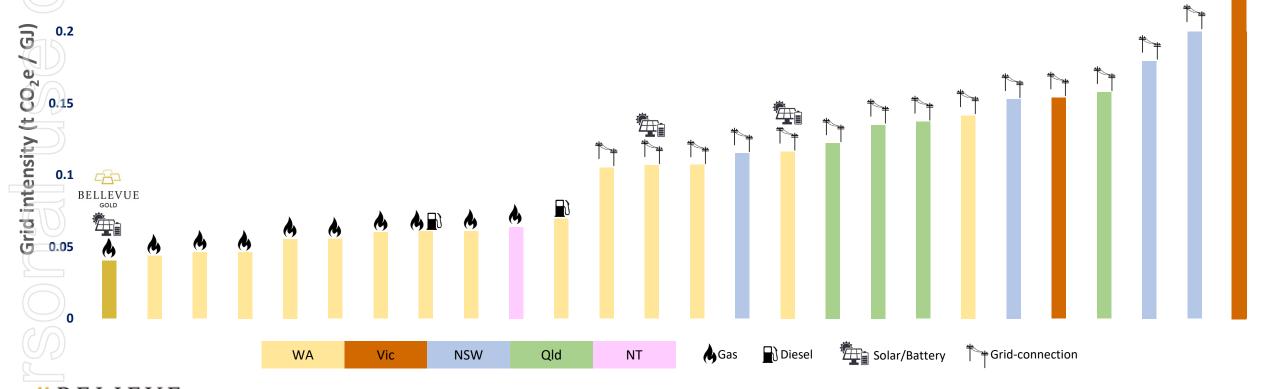

Energy-emissions intensity – Bellevue is leading the way

- Energy-emissions intensity is the factor of emissions per unit of energy produced, such as tonnes of CO₂e per GJ
- This trend shows that off-grid mines, powered by a gas-fired power station have a lower energy-emissions intensity than grid-connected mines
- MA gold mines are best performers on this energy-emissions intensity metric, due to high use of gas and some renewables
- Bellevue's base choice of gas is highly beneficial, which is bolstered by using renewable energy options

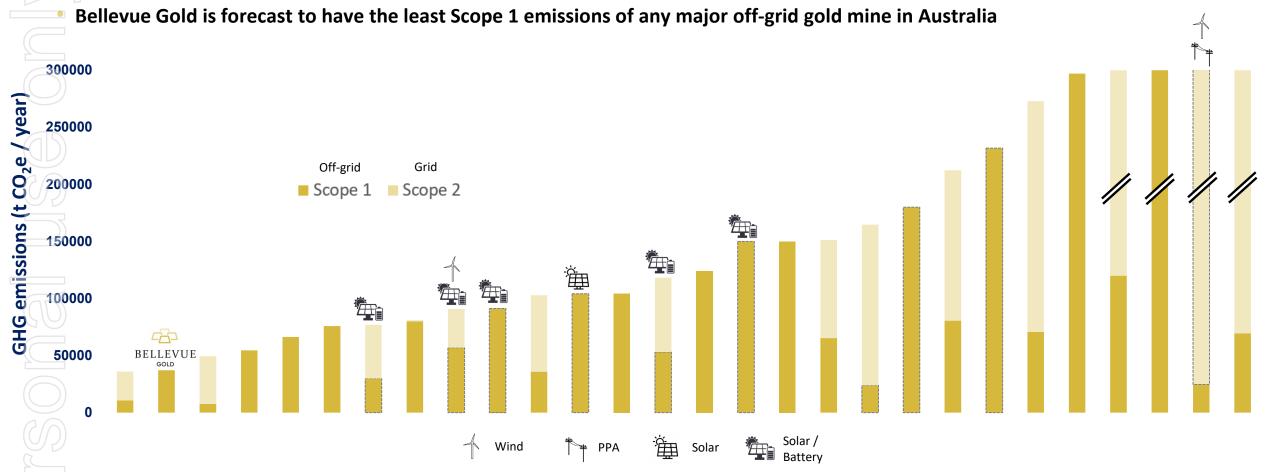

Scope 1 and Scope 2 emissions of Australian gold mines

The annual greenhouse gas emissions of Australian gold mines is plotted below

B E L I E V E

Due to the project's low carbon emission intensity, Bellevue will have one of the lowest total greenhouse gas emissions
per year of any Australian gold mine

Bellevue's community contributions and PACE values

Our commitment to the Communities in which we operate is the 'C' in our PACE values

Bellevue is committed to supporting Aboriginal people with pathways to employment. We offer trainees the opportunity to gain work experience in the mining industry and gain permanent employment. We have partnered with the Clontarf Foundation.

The Nyunnga-Ku (meaning "Women Belonging Too") Group, creates opportunities for women to learn new skills and have some fun. The group provides a place for women of all backgrounds to come together, support one another and discuss community-related issues. The sewing and craft group is held every Wednesday evening and is supported by Bellevue.

In 2020, Bellevue supported CentreCare and Family First's coordinator with the Leonora Mental Health Week. We provide sponsorship and an opportunity for community members to stay on site. Family First is an early intervention program designed to support vulnerable families who are showing early signs of, or are at risk of, developing mental illness.

Processing Plant Overview

Non Process Infrastructure

Infrastructure requirements

- New office and facilities to support the mine activities
- New 300-person camp located north of the project area with access from the Goldfields Highway
- Potable water sourced, treated and distributed around the site (has been secured and currently licenced)
- New island gas fired power station to be constructed opportunity to reduce emissions with introduction of renewables
- New TSF located towards the northern portion of the tenement downstream construction methodology incorporated into an integrated waste landform away from Lake Miranda
- All constructed landforms designed to complement natural landscape

Project Finance Key Terms

Loan Facility			
Facility Amount	A\$200,000,000 (Fully Underwritten)		
Tenor	31 December 2027 (6 years)		
Repayment Period	Quarterly, March 2024 - December 2027		
Interest Rate	3.50% per annum pre-Project Completion and 3.00% per annum post Project Completion		
Early Repayment	Allowed without penalties or charges		
Conditions and Warranties	Include entry into the 135,000 oz hedging facility, completion of due diligence satisfactory to Macquarie, and other customary conditions for facilities of this nature (including execution of a facility agreement on substantially the same terms as the Term Sheet and Commitment Letter)		
Mandatory Hedging	First drawdown subject to the implementation of the Gold Hedging Facility outlined below		
Guarantee	A registered first-ranking general security over all the assets and undertakings of Bellevue Gold Limited, Golden Spur Resources Pty Ltd, Giard Pty Ltd and Green Empire Resources Pty Ltd		
Hedging Facility			
Mandatory Hedging	135,000 ounces of gold		
Minimum hedge price	A\$2,250 per ounce		
Delivery dates	Quarterly from March 2024 - December 2027		
Margin Call	Free of margin calls		
Conditions and Warranties	Customary for a project financing facility of this nature		

Opportunities & Risks

Opportunities

- Mill throughput increase to process lower grade stockpiles of mined material. Infrastructure design has allowed for readily expandable growth.
- Paste fill for underground voids, test work currently underway to assess suitability for pillar use. Will increase TSF capacity by placing material back underground
- Resource conversion of material into the mine plane. Approximately 50% of the Global Resource is included in the current LOM plan
- Organic Resource Growth Marceline, Henderson/Hamilton, Southern Belle, Luck Now
- Conversion and inclusion of Bellevue remnant material into the mine
 plan currently no remnant ounces are included in the Feasibility Study
- Regional Resource Growth Government Well and Kathleen Valley, Yandal Project

Risks

- Gold price volatility and exchange rate risk
- Resource and Reserve estimates
- Risks as to forecasts
- Financing risks
- Access, approval and Native Title risks
- Personnel and operating costs
- Supply and third-party risks
- COVID-19
- Operational and development risks
- Budgeting and additional requirements for capital
- Changes in law, government policy and accounting standards risk
- Environmental risk
- Climate change risk
- Insurance, contractual and competition risks
- Occupational, health and safety
- Underwriting risk

Mineral Resource and Ore Reserve Estimates

INDEPENDENT JORC 2012 RESOURCE AND RESERVE ESTIMATES FOR THE BELLEVUE GOLD PROJECT 3.5g/t gold lower cutoff, totals rounded to reflect acceptable position

Mineral Resource	Tonnes (Mt)	Grade (g/t Au)	Contained Ounces (Moz)
Indicated Mineral Resources	3.9	11.0	1.4
Inferred Mineral Resources	5.6	9.0	1.6
Total Mineral Resources	9.4	9.9	3.0
Ore Reserve	Tonnes (Mt)	Grade (g/t Au)	Contained Ounces (Moz)
Probable High Grade Underground Ore Reserve	3.6	7.7	0.90
Probable Low Grade Underground Ore Reserve	1.6	2.4	0.12
Probable Open Pit Ore Reserve	0.15	4.3	0.02
Total Ore Reserve	5.3	6.1	1.04
Stage 2 – Life of Mine (LOM) Resources and Reserves	Tonnes (Mt)	Grade (g/t Au)	Contained Ounces (Moz)
