

Investor Presentation.

Forward Looking Statements, Other Disclaimers.

This presentation includes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended; Section 21E of the Securities Exchange Act of 1934, as amended; and the safe harbor provision of the U.S. Private Securities Litigation Reform Act of 1995. Forward-looking statements contained in this presentation may be identified by the use of words such as: "believe," "expect," "anticipate," "project," "should," "plan," "will," "may," "intend," "estimate," predict," "continue," and "potential," or, in each case, their negative or other variations or comparable terminology referencing future periods. Examples of forwardlooking statements include, but are not limited to, statements regarding our financial outlook and guidance, short and long-term business performance and operations, future revenues and earnings, regulatory developments, legal events or outcomes, ability to comply with complex and evolving regulations, market conditions and trends, new or expanded products and offerings, growth strategies, underlying assumptions, and the effects of any of the foregoing on our future results of operations or financial condition. Forward-looking statements are not historical facts and are not assurances of future performance. Rather, these statements are based on our current expectations, beliefs, and assumptions regarding future plans and strategies, projections, anticipated and unanticipated events and trends, the economy, and other future conditions, including the impact of any of the aforementioned on our future business. As forward-looking statements relate to the future, they are subject to inherent risk, uncertainties, and changes in circumstances and assumptions that are difficult to predict, including some of which are out of our control. Consequently, our actual results, performance, and financial condition may differ materially from those indicated in the forward-looking statements. These risks and uncertainties include, but are not limited to, "Risk Factors" identified in our filings with the Securities and Exchange Commission, including, but not limited to, our most recently filed Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, and any amendments thereto. Even if our actual results, performance, or financial condition are consistent with forward-looking statements contained in such filings, they may not be indicative of our actual results, performance, or financial condition in subsequent periods. This presentation is not an offer to sell or a solicitation of an offer to purchase securities by the Company. Any such offer or solicitation, if any, will only be made by means of offering documents (e.g., prospectus, offering memorandum, subscription agreement and or similar documents) and only in jurisdictions where permitted by law. Certain information contained herein has been provided by or obtained from third-party sources and has not been independently audited or verified by the Company. The Company makes no representation or warranty, express or implied as to the accuracy or completeness of information contained in this document, and nothing contained in this document is, or shall be relied upon as, a promise or representation by the Company. This presentation is not intended for any commercial purpose but strictly for educational or informational purposes only. Corporate Overview.

Modular Medical is a development stage medical device company seeking to produce a next generation insulin pump to expand access to a higher standard of glycemic management for people with diabetes.

Founded by Paul DiPerna, **founder of Tandem Diabetes (TNDM)** and original designer of its popular t:slim pump. 30-year veteran of the medical device industry.

Large portfolio of patented technology makes insulin pumps easy to learn, use, and afford.

Addressable Market: \$3 Billion

unmet market need

MODD1: Anticipated FDA submission Q3

Headquarters: San Diego, CA

NASDAQ: MODD

Insulin Pumps

Represent the gold standard in glycemic control. Better outcomes, better patient health, lower A1C. (Market share leaders: Medtronic, Tandem, Insulet)

Outcomes

Better outcomes lead to systemic savings: fewer trips to ER, reduced comorbidities. Saves \$10k/patient year (40%) even after cost of pump.

Limitations

Feature-heavy and complex systems have hampered adoption. These products are for "superusers." Prohibitive for many to learn and manage.

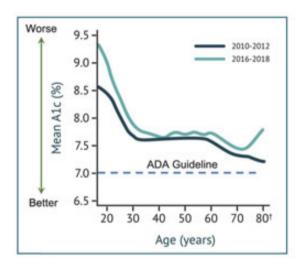

Cost Constraint

Expense of current offerings has placed them out of reach of many patients and insurance plans. Difficult reimbursement, large out of pocket expense.

- 1. Meaghan St. Charles et al. Value Health. Jul-Aug 2009
- 2. State of Type 1 Diabetes Management and Outcomes from the T1D Exchange 2016-2018

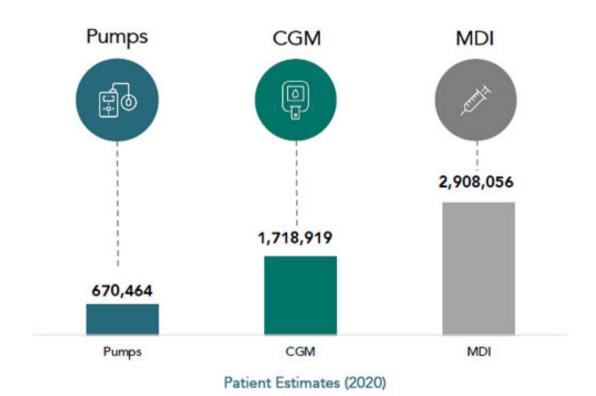

Current Market.

- 1 in 4 Healthcare dollars in the US are spent on diabetes and diabetes related complications.
- Only 1 in 3 Americans with type 1 diabetes use a pump.
 This number has been materially unchanged for 15 years.
- Only 8% of insulin dependent Americans with type 2 diabetes use a pump. This number is just starting to rise.
- Only 21% of T1D's reach ADA guidelines for glycemic control. Overall outcomes have not been getting better.¹

US Market Size.

27 million people with diabetes. 3.6 million require daily insulin (1.6M Type 1, 2.0M Type 2).

Only **20%** of insulin dependent people with diabetes use a pump for insulin delivery.

80% rely on multiple daily injections (MDI).

Continuous glucose monitors (CGM) have nearly **3X** the user base of pumps.

Patients estimates device type and therapy are for T1D and T2D combined. MDI defined as needing rapid acting and long-acting insulin. Other T2D not included are those on generic orals or diet and exercise only. 2020 National Diabetes Report (CDC)

Seagrove Partners LLC, HCP Perspectives August 2021 Precision Xtract September 2018

Encouraging Adoption.

Abbott Freestyle Libre made continuous glucose monitoring easier and more affordable. This expanded the product category and doubled its size.

We believe the insulin pump market is ready for a similar transition.

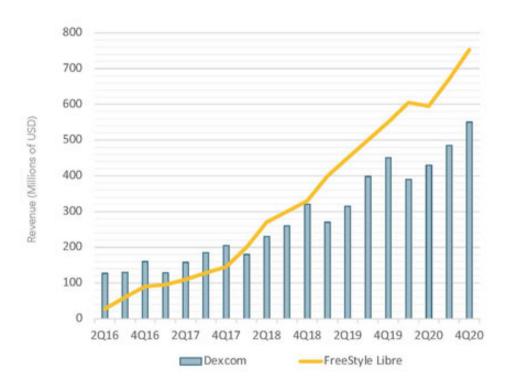

"In short, Flash Glucose Monitoring is fundamentally trying to take something that is more "professional" (i.e., traditional CGM) and make it more accessible to the masses. In consumer-packaged goods, examples of this strategy include home espresso makers (Keurig), cleaning products (e.g., dilatable floor cleaners, spray cleaners, wipes, toilet wands), and teeth whitening (e.g., whitening strips).

In these cases, the new innovation completely changed the entire category; we look forward to seeing if Flash Glucose Monitoring does something similar in diabetes."

Kelly Close, 2014

FreeStyle Libre vs. Dexcom Revenue

\$3B US market of almost pumpers.

HCPs fairly consistently indicated that about 25% of their MDI population are "almost pumpers", meaning that they have considered going on a pump, understand pump therapy benefits, but want something simpler that doesn't have all the "bells and whistles"...*

1.2M T1D MDI

28% of T1D MDI (\$1.37B)

1.6M T2D MDI

25% of T2D MDI (\$1.63B)

^{*}Seagrove Partners LLC, HCP Perspectives August 2021.

What are almost pumpers asking for?

45% expressed a desire to go on pump

- Make it easy for me
- Make it easy for my doctor
- Make it easy to get coverage
- Make it easy to share my data with my care team

Bottom line:

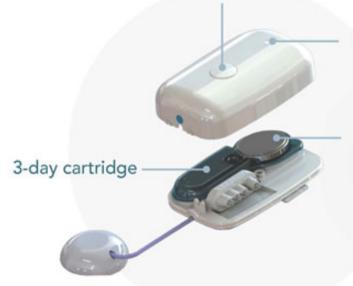

"I cannot spend more time managing my diabetes."

MODD1

Insulin Delivery for Almost Pumpers.

90-day reusable pump

No external controller required

No charging or battery replacement

Removable

Eliminate trade offs to expand the market.

Same accuracy as leading pumps*. Smoothest, most continuous basal administration in the industry*.

Only patch pump with full sized **3ml reservoir.**

Latest low power Bluetooth, Near Field Communications (NFC) and mobile app for ease of pairing and data-connectivity

Currently under research and development, not available for investigational use or sale *Testing is currently in progress

MODD Technology Designed to Provide Precision and Safety.

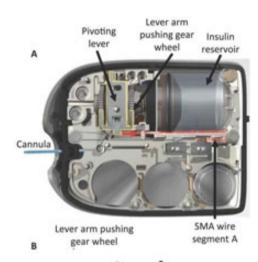

- Precision micro-dosing limits excessive insulin exposure and preserves insulin molecule integrity*
 - Can be used with the latest ultra rapid insulins*
 - More continuous insulin delivery with small increments as needed, not locked into five-minute intervals like other pumps
- 8 family patents underway to provide a sustainable competitive advantage
- Ultra high-volume major components make low cost manufacturing a reality for the first time in the industry
- 50% lower cost of goods than leading patch pump

Currently under research and development, not available for investigational use or sale *Testing is currently in progress

Simple Design Enables Automated, High-Volume Manufacturing.

Insulet Omnipod

Designed with the Patient & Provider in Mind.

Provider

- Direct sales Force
 Focused on Providers
- Free Samples to Encourage Trial
- Point of Prescription Couponing
- Simple to Teach and Support Patients

Patient

- Only product that you can take home today from doctor's office
- App to Learn Product
- Free 30-Day Trial Coupons
- Co-Pay buydowns
- Reduced outlay of time and money

Telehealth Optimized

Endocrinologists are perfect candidates for telehealth. They are overworked, underpaid, and need to drive more volume through their practices. Most of what they do can be done online (tests, guidance). There are only 4,000 patient facing endos in the US.

"Remote Patient Monitoring is still a relatively new concept for most respondents, and few knew about the five codes established by CMS However, upon education about the requirement and reimbursement amounts behind these codes, HCPs indicated an overwhelming amount of interest in this mode of patient management, with 85% saying that it was worth their time and effort."

Recently established remote monitoring codes offer \$200-250 reimbursement rate per patient month.

-Seagrove Partners Aug 2021 HCP Perspectives

Payor Preferred.

Our products are designed to attain preferential reimbursement and avoid the coverage pitfalls many other pumps have experienced.

Payor Benefits:

- 20% Discount vs Insulet (PODD) Provides Preferred Status
- Designed to use PBM codes as a disposable
- No New Code: Reimbursed at Launch
- Saves Provider \$1,032/Patient/Year vs Omnipod

National Payor Survey

Retained ISA to perform National Payors Survey on 1/3 of all commercial lives in US (50 million lives)

Survey data¹ shows that a product with Gen-1 features set at 10-20% discount to Omnipod will gain equivalent or preferential reimbursement at launch.

"I would say that if they could come in with an average monthly cost of, say, 20% less than Omnipod...we would make this our preferred."
- IDN

Data shows that discounting and rebates have been uncommon and small in insulin pumps. 5% is currently the largest in the space.

"We expect that the manufacturer will come to the table, probably with an access rebate [of approx. 5%]. This is based on the fact that Medtronic has already come to us with this kind of rebate."

- National Health Plan

Payors showed an interest in a simple product that was less expensive.

"I like the simplicity and so as a consequence, it's attractive to me mostly because I'm very price sensitive. I don't think there's any meaningful evidence basis for all those fancy and high-tech products."

- Regional Health Plan

^{2.} Calculation based on Omnipod US data from SGP 2019 diabetes bluebook and internal cost estimates.

Timeline.

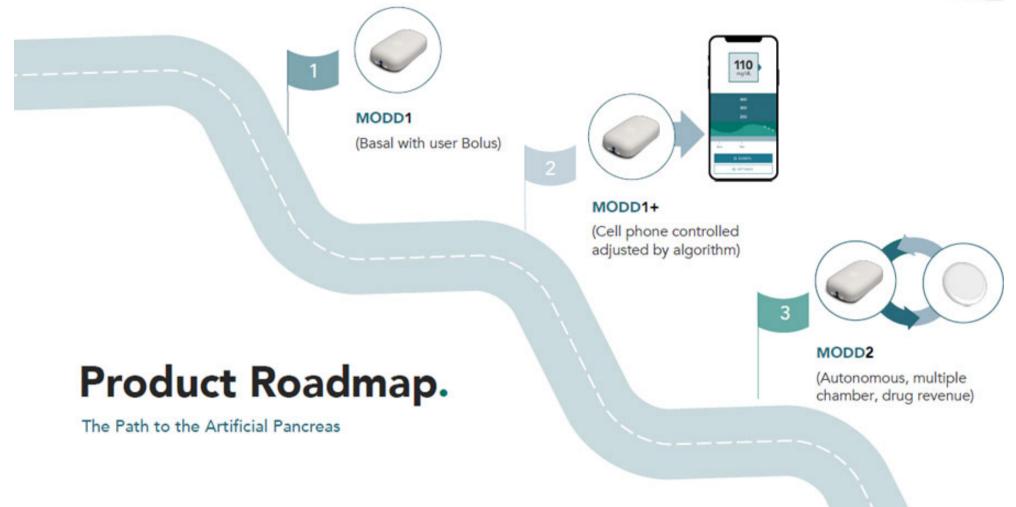

Approval: 510(k) Predicate device approval pathway for FDA label. Same label as Omnipod.

Testing is based on benchtop tests, no human trials required (no insulin pump has done pre-approval human trials)

Submission: First FDA meeting was held in Nov. 2019. Second meeting was Mar. 2020. FDA submission expected **Q3 2022**. Anticipated 6-month review period.

Currently under research and development, not available for investigational use or sale

In Development MODD1+.

Enhanced Modular Patch Pump: Cell Phone Controlled

Allows use of user's own cell phone as controller. No dedicated controller required.

CGM Integration

Allows algorithms to adjust basal rate for meals and exercise.

Ease of Use

Same modular design and ease of use as MODD1, with enhanced control functionality.

Currently under research and development, not available for investigational use or sale

In Development

50% complete

Cell Phone Controlled

The Future of Care MODD2.

MODD2 is a native multi-chamber pump developed with enhanced ease of use in mind. Designed to be prefilled, the MODD2 will enable Modular Medical to capture drug revenue.

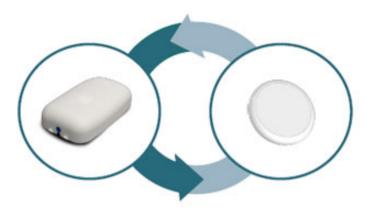

Modular Medical will become the one-stop shop for all of a user's diabetes needs.

MODD2 Features

- Closed Loop System
- Continuous Glucose Monitor Measures Blood Sugar, Feeds Data to Pump
- Algorithms Inform Pump Activity
- No Human Intervention Required
- Working prototype currently complete

1. Reuters "US insulin costs" 2012-16, Good RX.
2. \$1,088 Avg price for monthly supply from Good RX. Assume ~50% price drop for generic.
3. (\$4,800 + \$6,000 + \$4,300) X 1.5 million T1 Diabetics = \$22.65bn

Artificial Pancreas

US Addressable Market³

EU: Single-Payors Want Lower Overall Costs.

Hesitant to Pay Upfront for Durables

people have diabetes in Europe¹

\$1 in \$4

global diabetes spending occurs in this region²

\$156B

spent annually in diabetes healthcare costs³

3 European countries in Top 10 countries for highest number of children and adolescents with T1D 2

- European single payor systems avoid upfront costs, instead preferring low initial cost and a strong relationship between cost and health outcomes
- Pumps have had limited success in UK and Germany
 - UK guidelines mandate pump usage for all pediatric T1D patients, yet only 1/3 use pumps due to scarce NHS funding. Current funding would buy MODD pumps for all UK pediatric diabetics. \$25-30 million annual opportunity with no direct sales force needed.
 - Low pump penetration outside of Germany and UK. Green-field opportunity

The Team.

Paul DiPerna Chairman & CTO

30 years of experience in medical device industry

- Led over 10 projects to FDA approval
- Founder Tandem Diabetes (TNDM:NAS)
- Designer and lead developer of t:slim pump, a leading insulin pump in type 1 diabetes
- Founder and CEO, Modular Medical: an innovative next generation insulin pump

Proven ability to develop products and win FDA approval

Tandem Diabetes Care – 510k approval on their T-Slim –2012

National Cardiac – 510k approval on a disposable EKG sensor -2018

Ivera Medical – 510k approval on a Luercap for infection control –2015

Baxter Healthcare - FDA approvals (1988-2003) on product in the fields of: Blood Canisters, Suction Yankhauers, Wound Drains, High Speed Centrifuges for separating blood, Povidone Iodine anti microbials and a variety of blood collection devices.

Artificial Pancreas Will Be Multi-Chamber.

- FDA has established 70% Time In Range "no human intervention" standard for AP.
- "Control IQ" study published in NE Journal of medicine barely reached 70% despite announcing meals, sleep, and exercise.
- Prominent KOL's and Algo designers feel 70% TIR without intervention is out of reach with insulin alone: the Artificial Pancreas will have to be multiple liquid.
- Multiple liquid will require small, simple, affordable pumps. Complexity and cost are multiplied. Legacy technology is not well suited.
- MODD well positioned to be first to market with viable multi-chamber product.
