DL Foreign-Currency Hedged Bond Investment 1 (Balance)

- ▶ DL executed significant reduction of foreign-currency hedged bond from the point of risk-return aspect under the rapid overseas interest rates hike especially in the shorter-end of yield curve.
- ▶ Reconsider investment process for foreign-currency hedged bond and implement stricter asset allocation and risk management.
- ▶ Based on the interest rates forecast and market liquidity going forward, DL will continue to reduce the exposure.

Breakdown of Foreign-Currency Hedged Bond (Carrying amount)⁽¹⁾

Currency hedging accounting impact

- The accounting book value of foreign-currency hedged bond with fair value hedge using currency forward contract is adjusted based on the currency evaluation at the end of each quarter. (While currency forward as a hedging instruments are also evaluated.)
- Currency hedging cost is recognized as foreign exchange losses from the gap between currency evaluation on foreign-currency hedged bond and forward contract as above.

(1) Incl. amount of foreign-currency full-hedged bonds using currency swap (Mar-21: ¥207.8bn, Mar-22: ¥208.6bn, Sep-22: 253.2bn)

DL Foreign-Currency Hedged Bond Investment 2 (P/L·Currency hedging cost)

- ▶ 2Q YTD interest income from the foreign-currency hedged bond decreased by only 3% YoY thanks to Yen depreciation, even after significant reduction of the balance.
- ▶ While currency hedging cost in 2Q YTD was relatively low due to a limited rolled amount of currency forward contract, a large amount of currency forward contract is scheduled to be rolled in 2H. The estimate for full-year currency hedging cost remains unchanged at approx. ¥90bn from the previous estimate at the end of June due to significant reduction of the balance, even though current short-term overseas interest rates is already higher than our previous expectation.

Domestic Life Insurance Business: Dai-ichi Frontier Life

- Fundamental profit decreased by 87% YoY to ¥2.8bn mainly due to a decrease in gains from core insurance activities affected by increase of regular policy reserves for foreign currency denominated products, partially offset by increase in positive spread. Net income decreased from ¥45.6bn to (¥10.6)bn due to the deterioration of valuation losses related to interest rates fluctuation included in the MVA related gains (losses), offset by one-time gains on reaching policy targets driven by Yen depreciation. Adj. profit excluding MVA related losses decreased by 72% YoY to ¥5.6bn.

Gains and Losses on Market Value Adjustment (MVA)

- ▶ For products with MVA option, the J-GAAP liabilities are recognized as the greater of surrender value or the value of policy reserves determined by assumed interest rate. When interest rate decreases, the surrender value will be higher than the value of policy reserves, resulting in an accrual of MVA related policy reserves.
- ▶ Gains/losses on MVA are offset on an accounting basis over time, therefore excluded from group adjusted profit calculation.

Policy Reserves Accrual on MVA

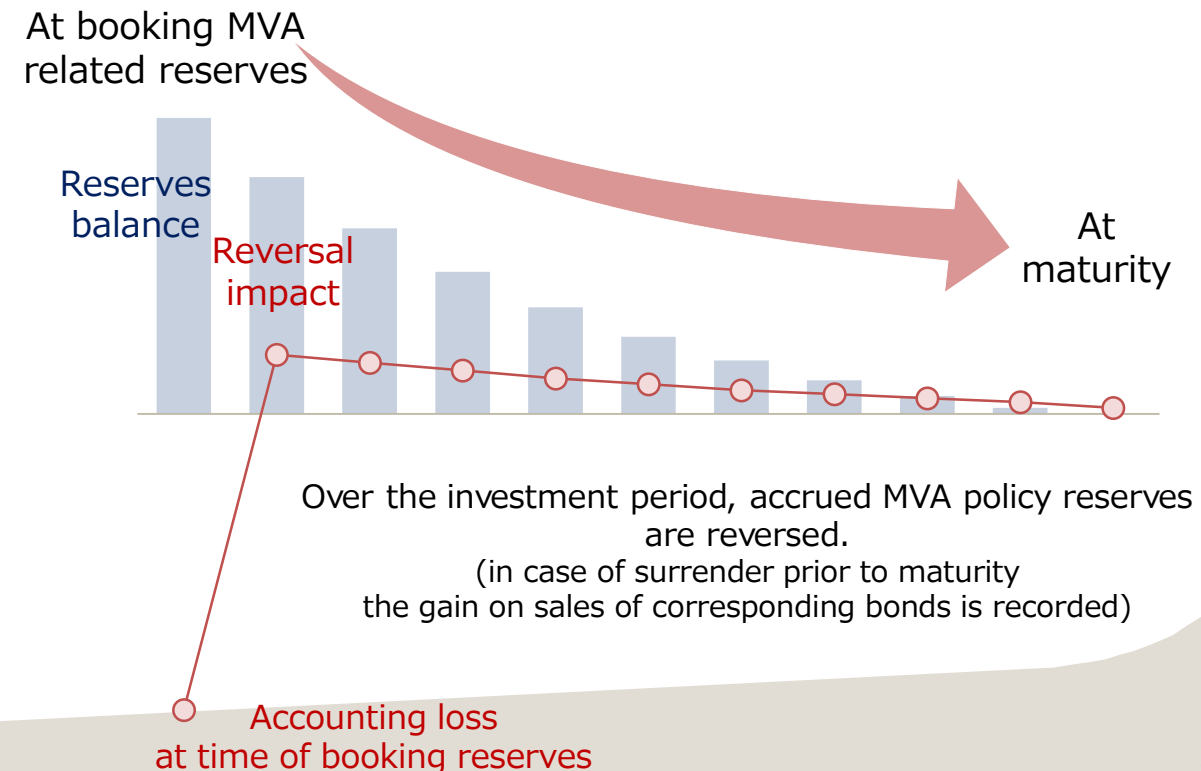

**Interest rate decrease
≡ Accrue MVA related reserves**

J-GAAP liabilities at the end of each period are based on the higher of ① or ②. When interest rate decline and ② > ①, additional policy reserves are accrued.

Reversal of Policy Reserves Accrued on MVA

Assuming flat interest rate after booking MVA related policy reserves, the amount of reserves is recalculated according to the market interest rate.

[Reference] Revision of Fundamental Profit Calculation Method

- From the perspective of reflecting the economic reality and achieving consistency in the insurance sector, the calculation method of fundamental profit is scheduled to be revised from FY2022. Our fundamental profit forecast reflects this revision, and to be disclosed based on revised standard from 1Q.
- If the revision reflected for the actual FY2021 results, the fundamental profit (positive spread) would decrease by ¥88.7 billion. No impact on the adjusted profit, group underlying performance indicator, as well as ordinary profit and net income.

FY2022 Group Adjusted Profit and Value of New Business Forecast

- ▶ At DL improvement in reinsurance ceding related losses and gains on sales of securities will almost offset the decrease in fundamental profit due to increase in currency hedging costs and higher Covid-19 related insurance claims. Taking into account expanded the scale of reinsurance ceding executed in FY2021 and current interest rate trends, new budget for FY2022 includes reinsurance ceding of approximately ¥100 billion policy reserves.
- ▶ While PLC expects a certain improvement in Covid-19 related insurance claims, a reactionary decline in one-time investment gains recorded in FY2021 will have a major impact.
- ▶ Group value of new business is expected to be affected by improvement of product mix due to decrease in conversion policies with limited additional profitability at DL and increase in new business at other group companies.
