
ALX ONCOLOGY

March 25, 2022

DISCLAIMER

This presentation contains forward-looking statements that involve substantial risks and uncertainties. Forward-looking statements include statements regarding future results of operations and financial position, business strategy, product candidates, planned preclinical studies and clinical trials, results of clinical trials, research and development costs, regulatory approvals, timing and likelihood of success, plans and objects of management for future operations, as well as statements regarding industry trends. Such forward-looking statements are based on ALX Oncology's beliefs and assumptions and on information currently available to it on the date of this presentation. Forward-looking statements may involve known and unknown risks, uncertainties and other factors that may cause ALX Oncology's actual results, performance or achievements to be materially different from those expressed or implied by the forward-looking statements. These and other risks are described more fully in ALX Oncology's filings with the Securities and Exchange Commission ("SEC"), including ALX Oncology's Annual Report on Form 10-K and other documents ALX Oncology files with the SEC from time to time. Except to the extent required by law, ALX Oncology undertakes no obligation to update such statements to reflect events that occur or circumstances that exist after the date on which they were made.

This presentation concerns product candidates that are under clinical investigation, and which have not yet been approved for marketing by the U.S. Food and Drug Administration. These product candidates are currently limited by federal law to investigational use, and no representation is made as to their safety or effectiveness for the purposes for which they are being investigated.

This presentation also contains estimates and other statistical data made by independent parties and by ALX Oncology relating to market size and growth and other industry data. This data involves a number of assumptions and limitations, and you are cautioned not to give undue weight to such estimates. In addition, projections, assumptions, and estimates of ALX Oncology's future performance and the future performance of the markets in which it operates are necessarily subject to a high degree of uncertainty and risk.

ALX ONCOLOGY

ADVANCING A HIGHLY DIFFERENTIATED IMMUNO-ONCOLOGY PIPELINE

ALX Oncology (Nasdaq: ALXO) is advancing a pipeline of candidates based on expertise in protein engineering and oncology led by the CD47 blocker, evorpacept, currently in phase 2 clinical trials

Evorpacept (myeloid checkpoint inhibitor) as a cornerstone therapy

Randomized phase 2 trials enrolling in 3 solid tumor indications: gastric/gastroesophageal cancer and 2 head and neck squamous cell carcinoma trials

Ongoing early clinical trials in 2 hematologic malignancies: myelodysplastic syndromes and acute myeloid leukemia

Continuing to broaden potential uses in new combinations and tumor types.

Building early stage pipeline

Ongoing IND-enabling development of ALTA-002 through 50/50 joint collaboration.

Early preclinical development of tumor-activated antibody platform.

Strong financial position

Cash and equivalents of $363.7M as of December 31, 2021.

Expected cash runway to mid 2024.

Collaboration partners

Merck, Eli Lilly, Zymeworks

ALX ONCOLOGY

EVORPACEPT'S BROAD CLINICAL DATA SUPPORTS ITS DIFFERENTIATED POTENTIAL

Evorpacept was designed to:

Work in combinations

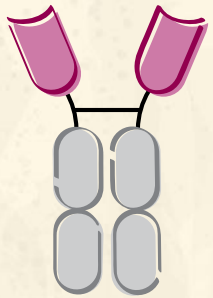
- \+ Antibodies
- \+ Checkpoint inhibitors
- \+ Chemotherapy

Target broad tumor indications

- Solid tumors
- Hematology

Be convenient and tolerable for patients

- Flexible dosing schedule
- Targets cancer cells



Evorpacept:

A phase 2 CD47 blocker designed to be a cornerstone of cancer treatments

Evorpacept's clinical data shows promising initial activity in:

Solid tumor combinations:

GC
Gastric/Gastroesophageal junction cancer

- Herceptin
- Herceptin + Cyramza + Paclitaxel

HNSCC
Head and neck squamous cell carcinoma

- Keytruda
- Keytruda + 5FU + Platinum

Hematology combinations:

MDS
Myelodysplastic syndromes

- Azacitidine

NHL
Non-Hodgkin's lymphoma

- Rituximab

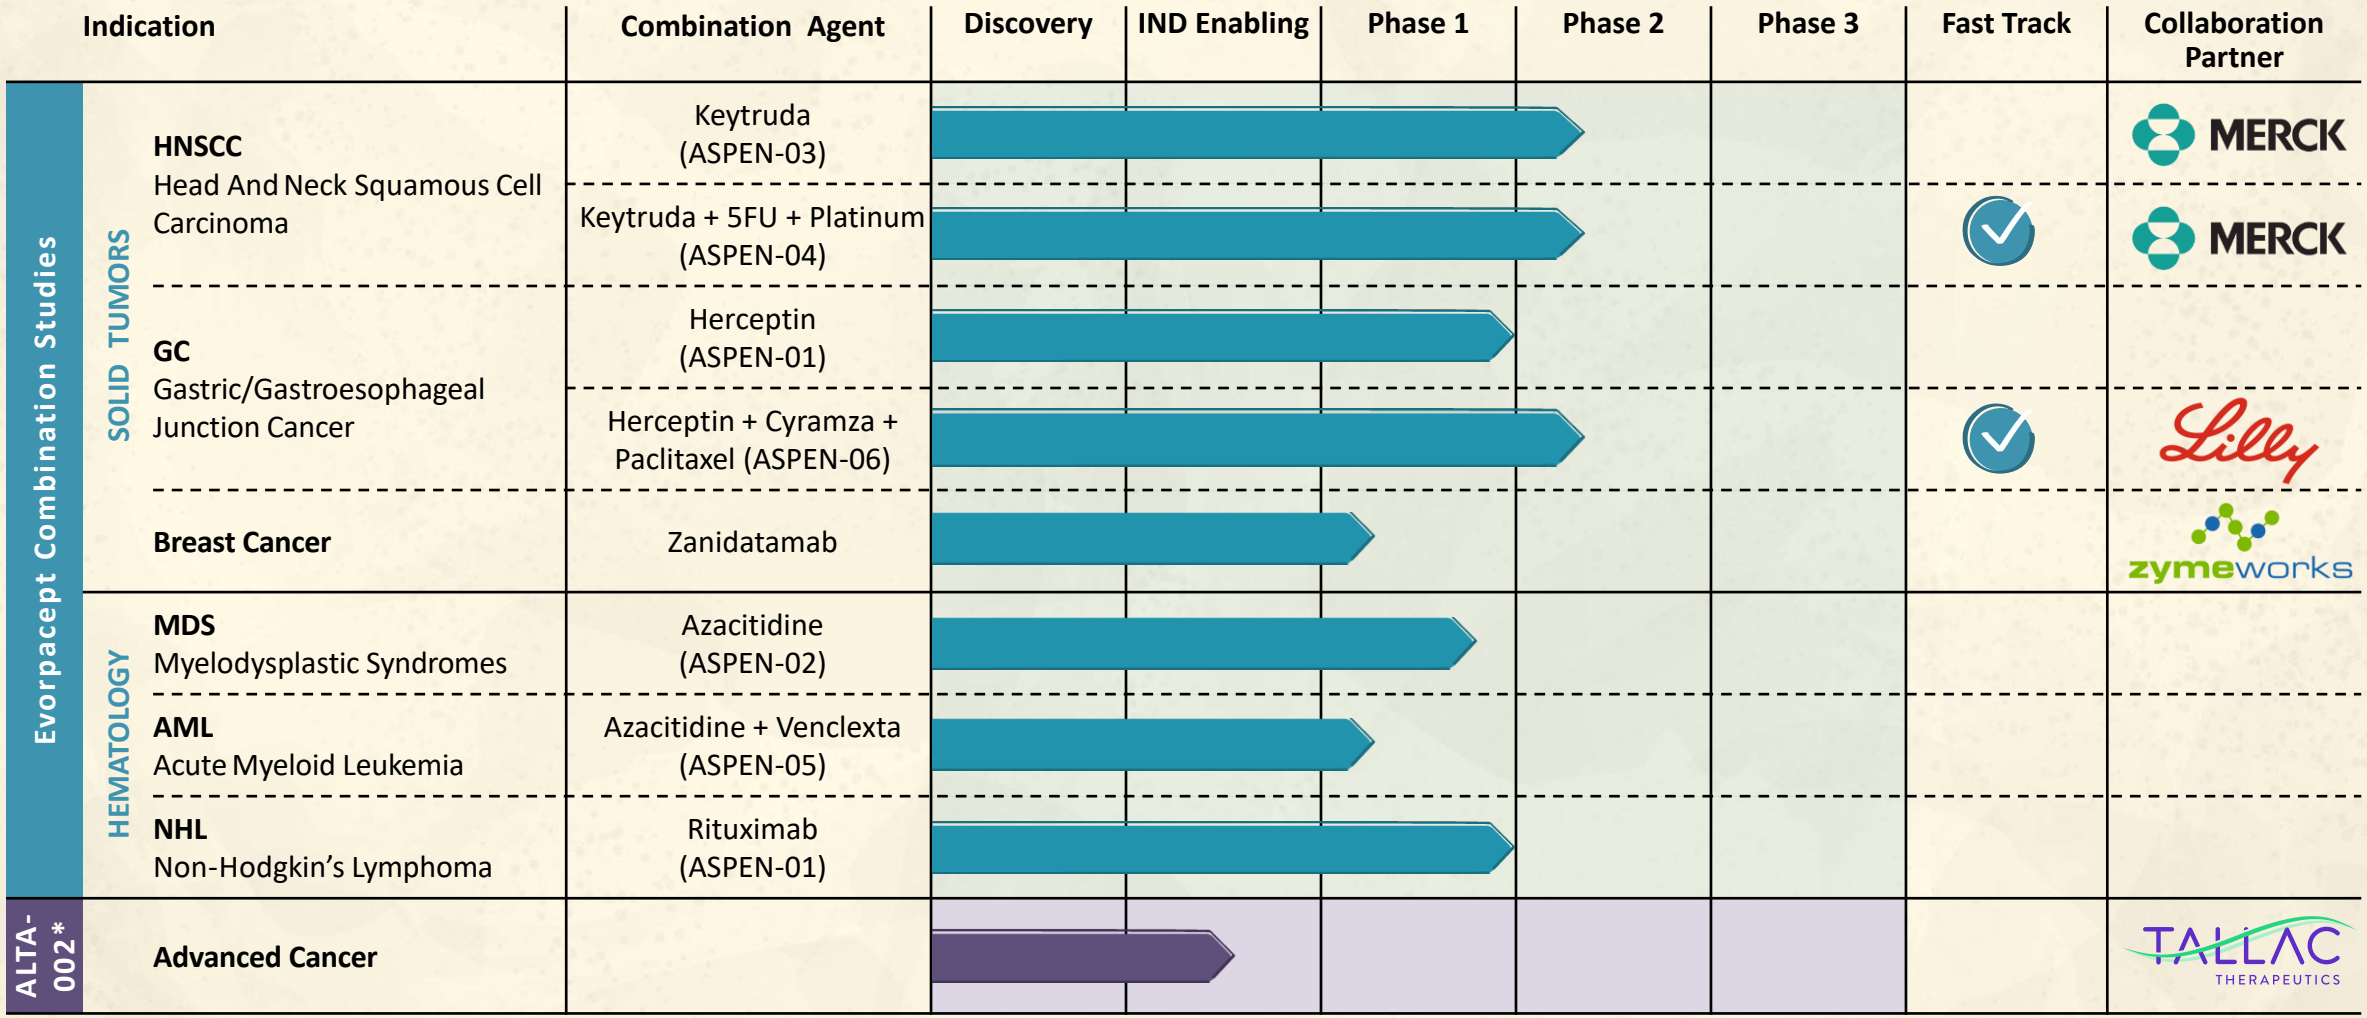
Flexibility and tolerability:

Dosing schedule
15 mg/kg QW, 30 mg/kg Q2W,
45 mg/kg Q3W, 60 mg/kg Q4W.

Tolerability profile
No dose-dependent cytopenias

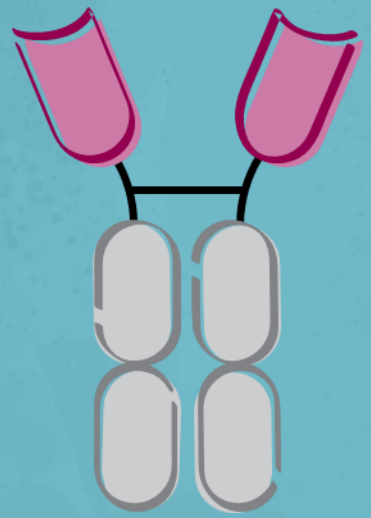
ALX ONCOLOGY

ALX PIPELINE



*SIRPα Toll-like receptor agonist antibody conjugate (TRAAC)

ALX ONCOLOGY

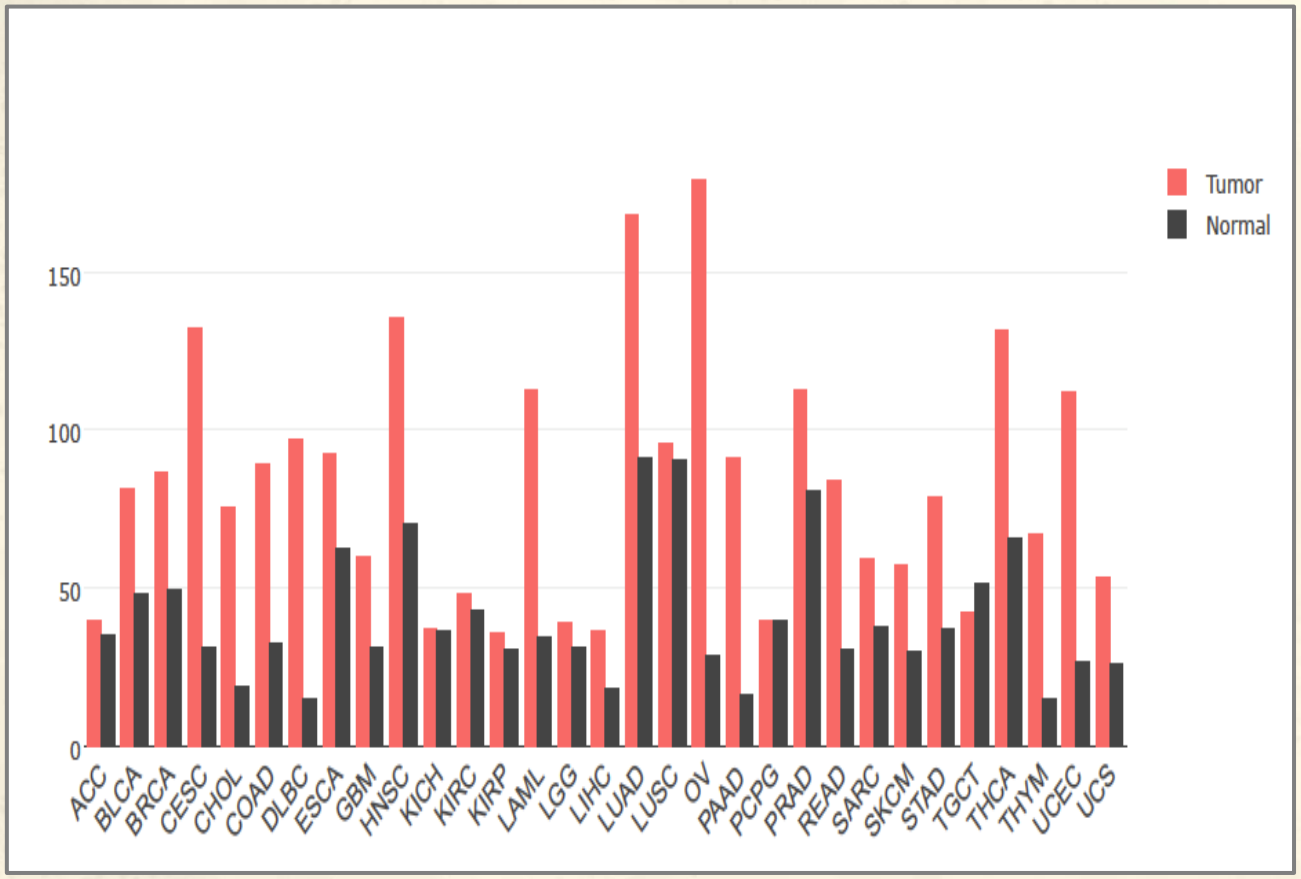


EVORPACEPT
(ALX148)

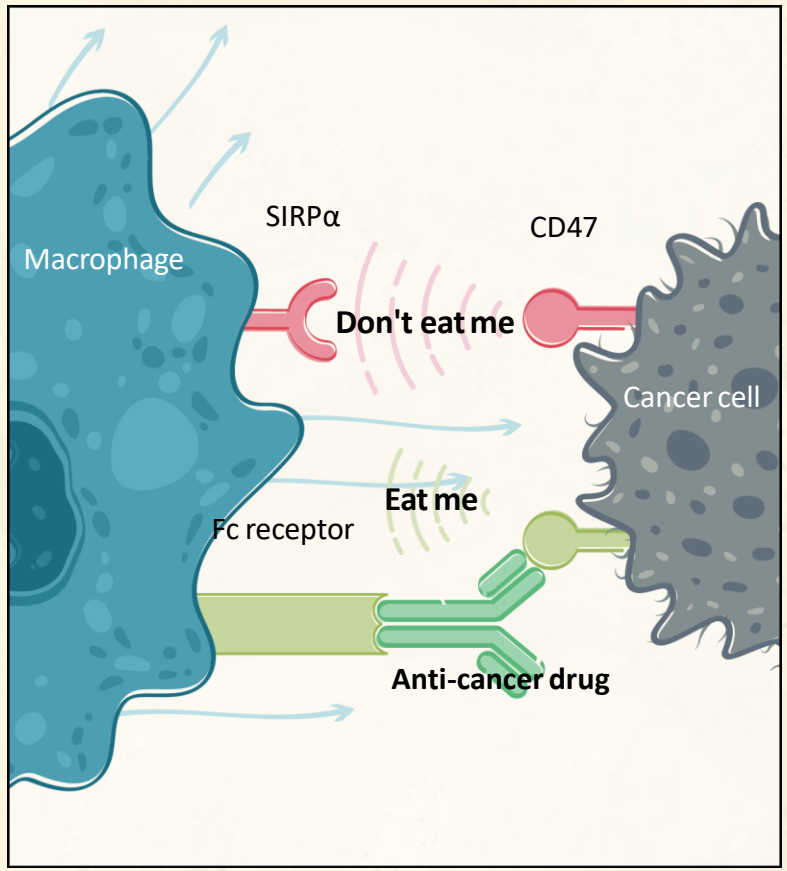
ALX ONCOLOGY

CD47: TUMOR ASSOCIATED ANTIGEN (TAA)- MYELOID CHECKPOINT DUALITY

TAA-Expression levels on cancer and normal cells



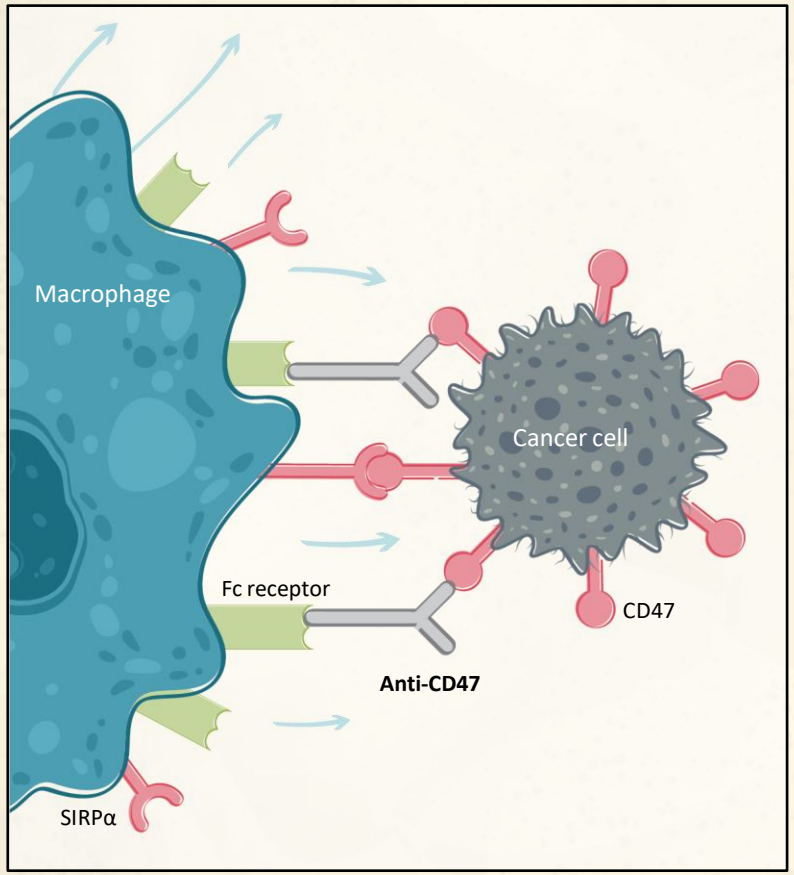
Checkpoint Mechanism: "do not eat me"

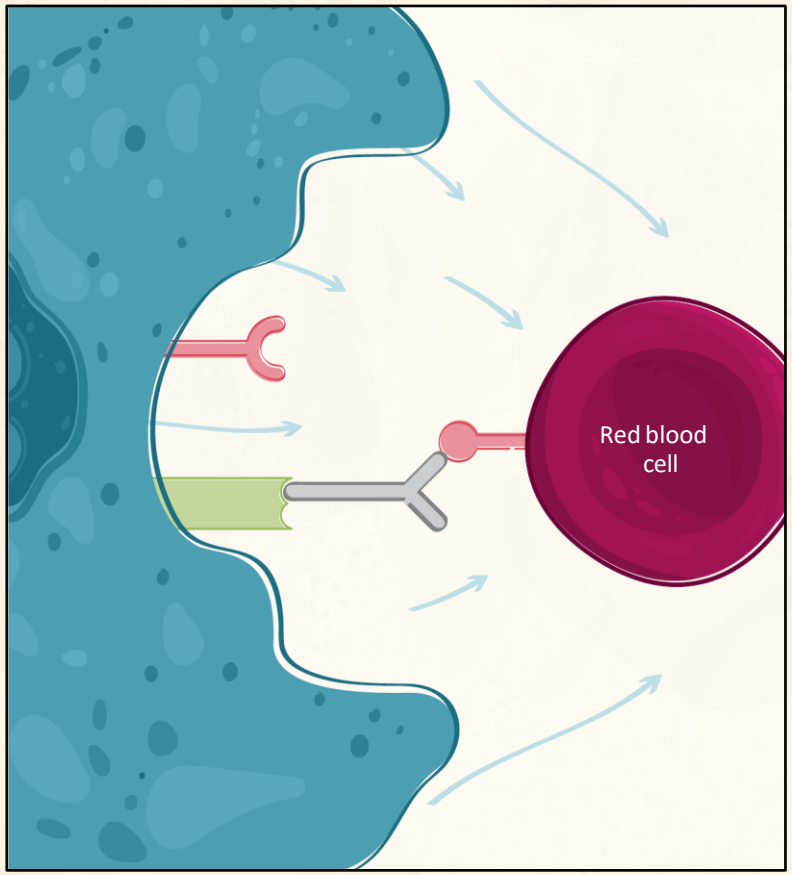


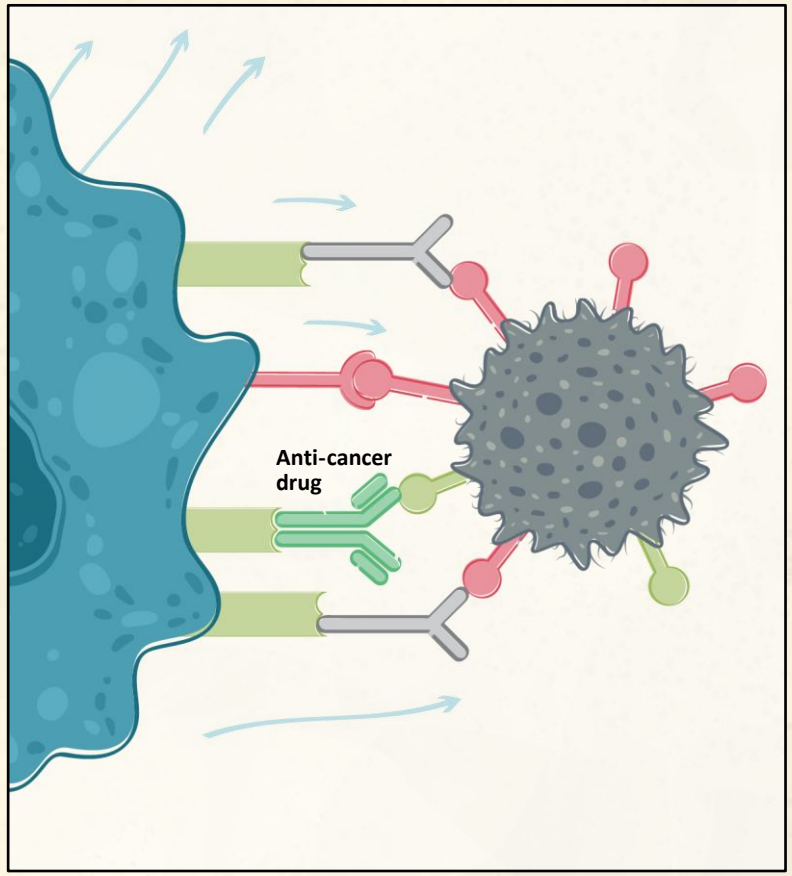
ALX ONCOLOGY

TARGETING CD47 AS TUMOR ASSOCIATED ANTIGEN

But also targets normal cells







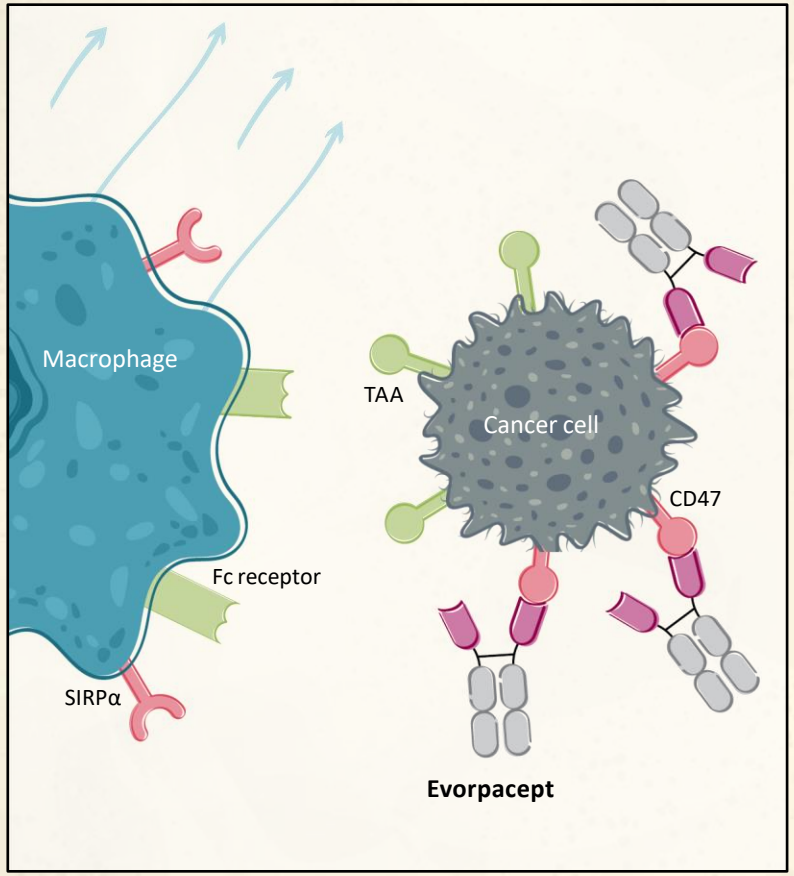
Anti CD47 with active Fc directly targets cancer cells

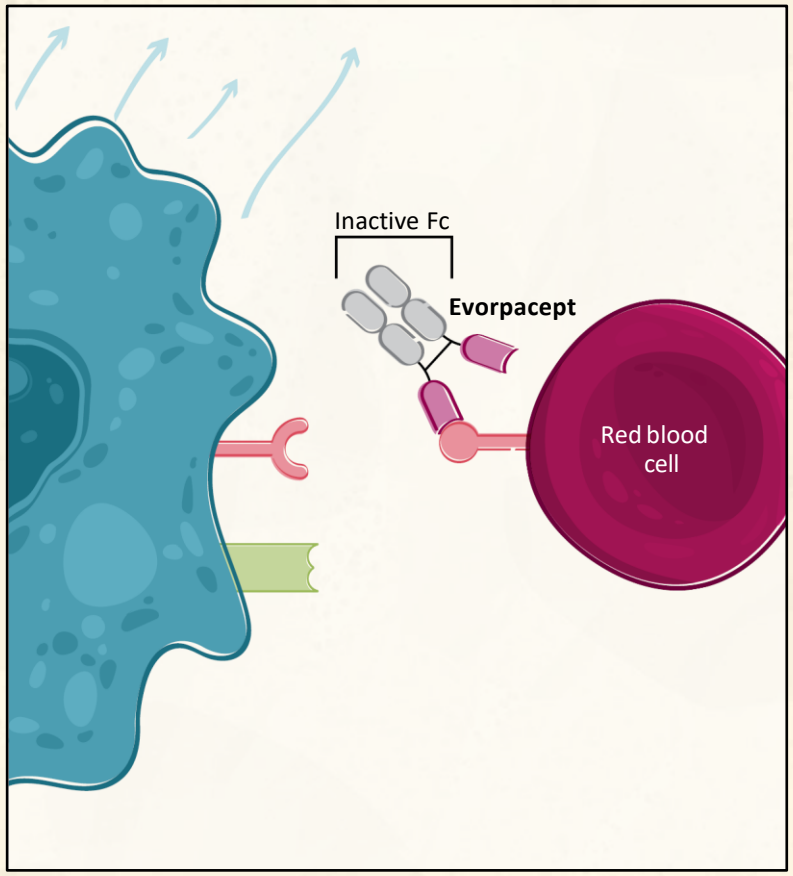
Dose limitations prevent full blockade of CD47 and active Fc competes with combo drug

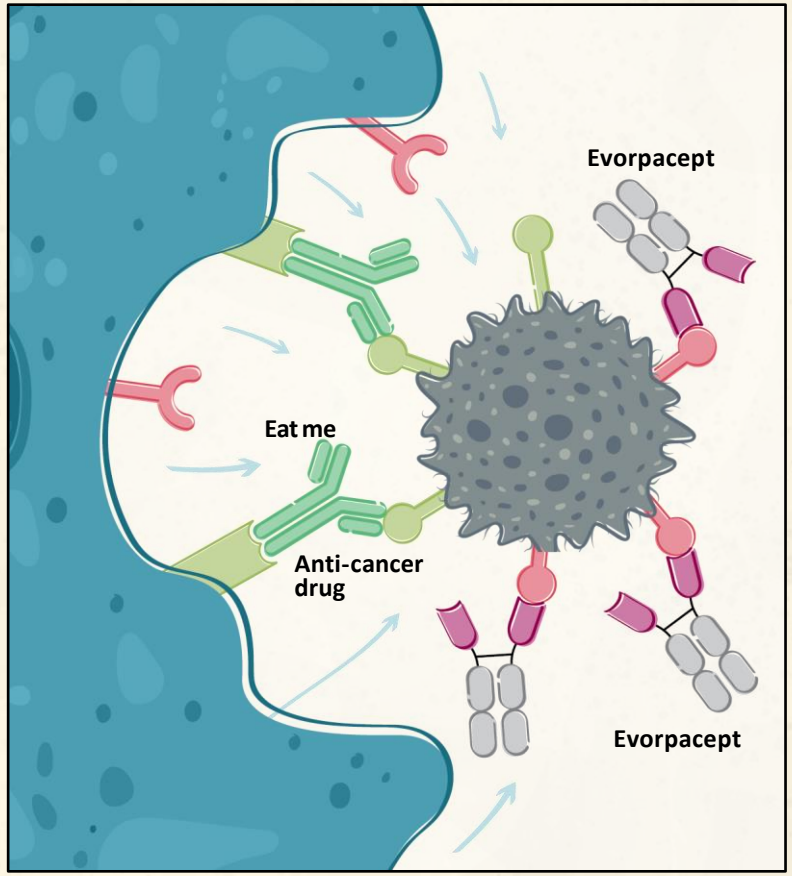
ALX ONCOLOGY

TARGETING CD47 AS CHECKPOINT: ALX ONCOLOGY'S APPROACH

It spares normal cells







Anti CD47 with inactive Fc binds and block CD47-SIRPα interaction

High dose allows full blockade of CD47 and maximizes activity of combo drug

ALX ONCOLOGY

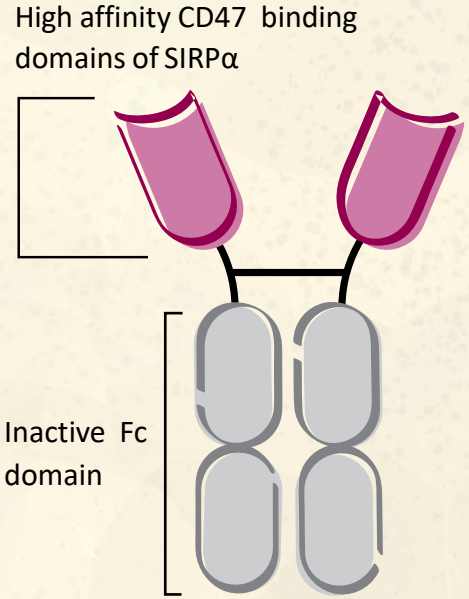
EVORPACEPT: METICULOUSLY DESIGNED CD47 BLOCKER

High affinity CD47 binding domain of SIRPα → **Potently blocks CD47 signal on cancer cells**

Inactive Fc domain eliminates binding activity → **No dose dependent cytopenia**

Presence of Fc domain ensures slow clearance and long half-life → **Less frequent dosing and more flexibility**

Designed for safety and efficacy



- ~Half the molecular weight of an antibody
- Increases solid tumor penetration
- Cross-reactive to human, monkey, mouse
- Standard antibody manufacturing process

ALX ONCOLOGY

ALX ONCOLOGY

Tolerability profile enables broad combination potential

For combination cohort of evorpacept plus Keytruda, treatment related adverse events occurring in >1 subject in all histologies at 10 & 15 mg/kg QW; data as of April 1, 2020. For combination cohorts of evorpacept plus Keytruda and chemotherapy (5FU, platinum) or plus Herceptin and chemotherapy (Cyramza, paclitaxel), all treatment related adverse events are reported; data as of September 01, 2021. For combination cohort of evorpacept plus azacitidine, treatment related adverse events occurring in >1 subject at 20 & 30 mg/kg Q2W & 60 mg/kg Q4W; data as of Oct 25, 2021.

EVORPACEPT'S INITIAL CLINICAL ACTIVITY IS MAGNIFIED IN SURVIVAL-BASED ENDPOINTS ACROSS SOLID TUMOR TYPES IN MULTIPLE TRIALS

Population	≥2L HER2+ GC		1L HNSCC		≥2L HNSCC (CPI-Naïve)

ALX ONCOLOGY

Data as of September 1, 2021.

PHASE 1B ≥2 LINE GC TRIAL: EVORPACEPT + HERCEPTIN + CYRAMZA + PACLITAXEL

Phase 1b higher dose + chemo trial:

Patients:

R/R HER2 positive GC, 2L or greater; Progressed on prior Herceptin and fluoropyrimidine or platinum.

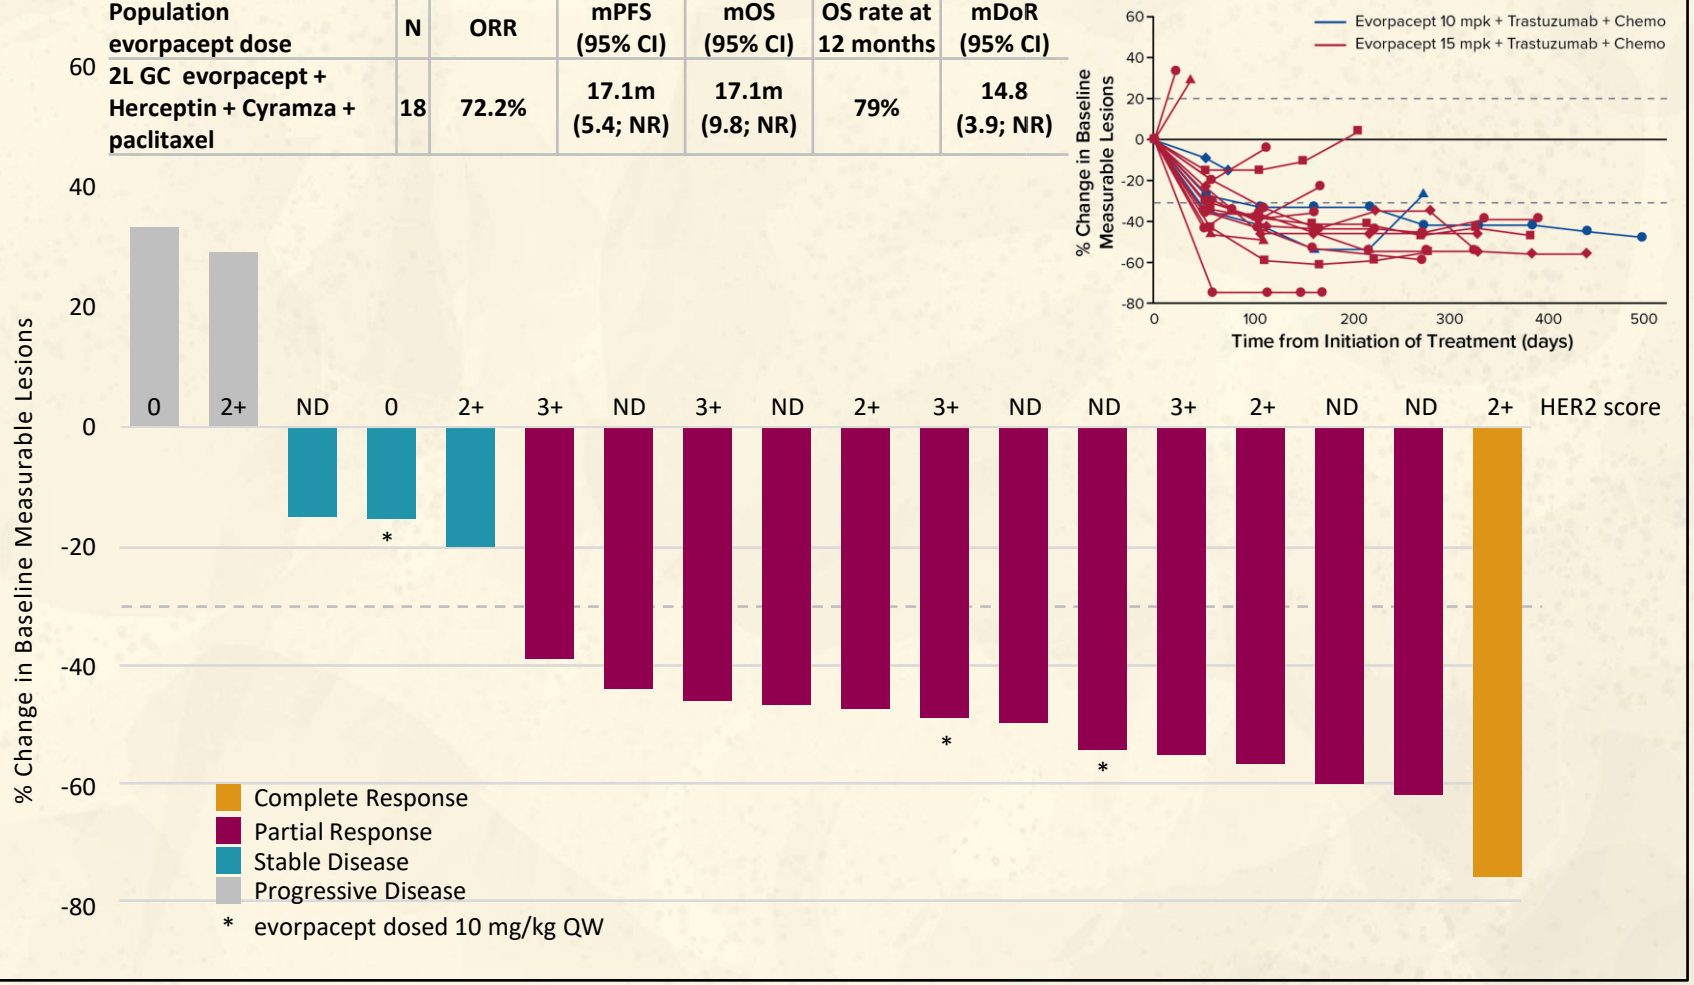
Treatment:

evorpacept 10 and 15 mg/kg (QW)
+ **Herceptin**
+ **Cyramza**
+ p**aclitaxel**

Endpoint:

- safety of combination
- anti-cancer activity

Population evorpacept dose	N	ORR	mPFS (95% CI)	mOS (95% CI)	OS rate at 12 months	mDoR (95% CI)
2L GC evorpacept + Herceptin + Cyramza + paclitaxel	18	72.2%	17.1m (5.4; NR)	17.1m (9.8; NR)	79%	14.8 (3.9; NR)



Data Cutoff September 1, 2021. ND = Not Done. NR = Not Reached.

ALX ONCOLOGY

SECOND LINE GC: RANDOMIZED PHASE 2 CLINICAL TRIAL, ASPEN-06

Randomized Phase 2:
First patient enrolled March 2022

Patients: **N=100**

2L or greater HER2 positive GC with prior HER2 targeted therapy

Treatment

evorpacept 30 mg/kg (Q2W)
+ Herceptin
+ Cyramza
+ paclitaxel

vs.

+ Herceptin
+ Cyramza
+ paclitaxel

Endpoint: • Anticancer activity: including ORR, DOR, PFS, OS

Randomized Planned Phase 3:

Patients:

2L or greater HER2 positive GC with prior HER2 targeted therapy

Treatment

evorpacept 30 mg/kg (Q2W)
+ Herceptin
+ Cyramza
+ paclitaxel

vs.

+ Cyramza
+ paclitaxel

Endpoint: • Anticancer activity: including OS, PFS, ORR, DOR

ALX ONCOLOGY

Dosing schedules: Herceptin and Cyramza Q2W, paclitaxel on days 1, 8, and 15 of a 28-day cycle

PHASE 1B ≥2 LINE GC TRIAL: EVORPACEPT + HERCEPTIN

Phase 1b GC trial:

Response evaluable patients

N=19 HER2 positive GC progressed on prior fluoropyrimidine, Herceptin or platinum.

Treatment:

evorpacept 10 mg/kg once a week (QW)

+ **Herceptin**

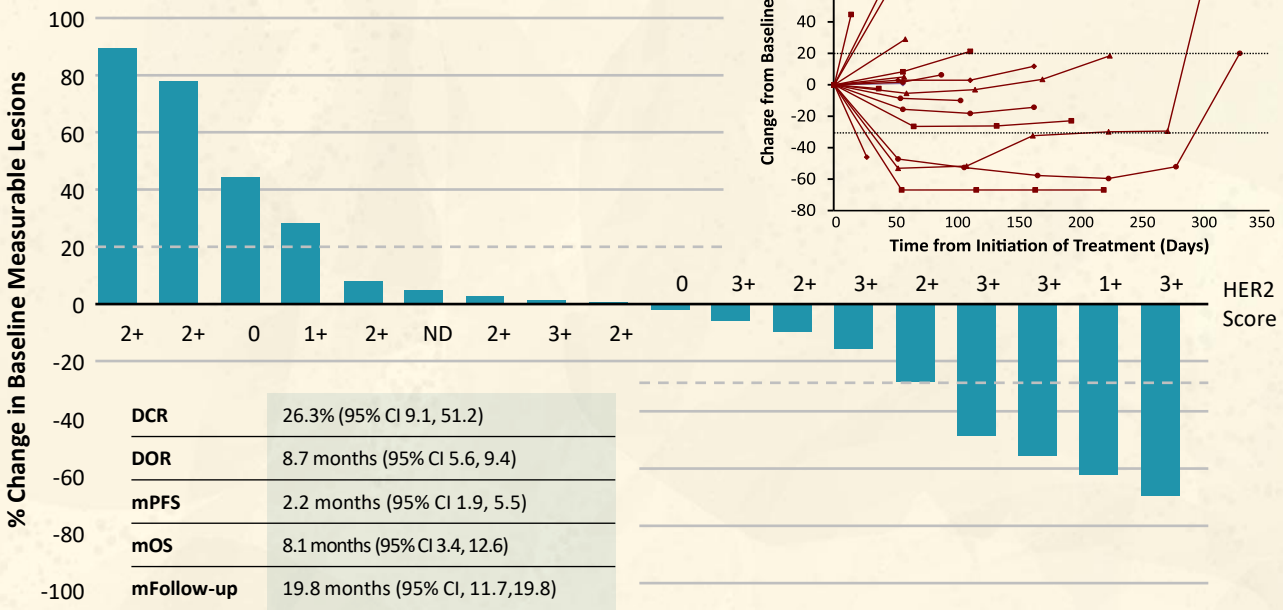
8 mg/kg once, then 6 mg/kg every three weeks (Q3W)

Endpoints:

- maximum tolerated dose
- anti-cancer activity

Result:

ORR 21.1% (4/19)



DCR	26.3% (95% CI 9.1, 51.2)
DOR	8.7 months (95% CI 5.6, 9.4)
mPFS	2.2 months (95% CI 1.9, 5.5)
mOS	8.1 months (95% CI 3.4, 12.6)
mFollow-up	19.8 months (95% CI, 11.7,19.8)

Notes: Data Cutoff October 1, 2020. Patients who received at least one dose of evorpacept in the expansion phase, had a baseline assessment, and at least one post-baseline disease assessment; One patient with clinical progression not included in plots.

ORR = Overall Response Rate. **ND** = Not Done. **HER2** Score retrospectively assessed using archival tissue by a central IHC lab.

FDA granted evorpacept fast track designation for second-line treatment of HER2 positive GC

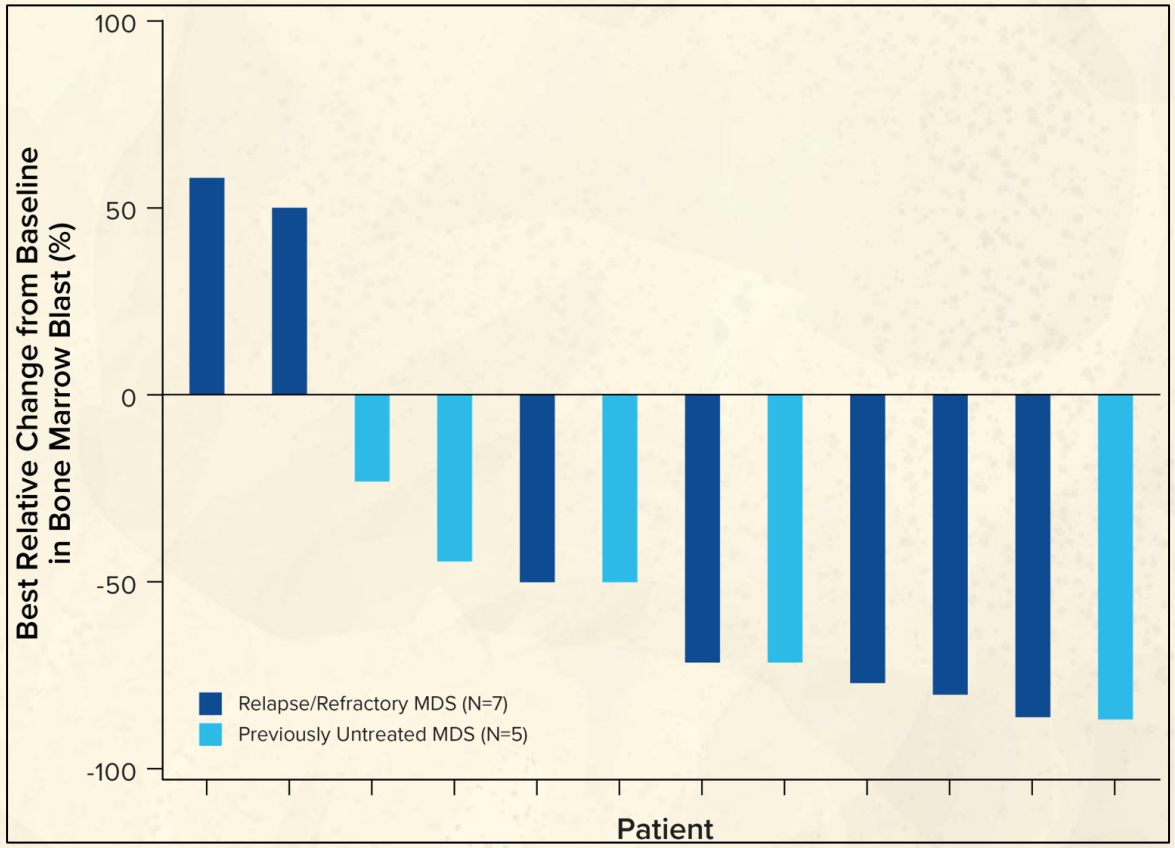
Data as of October 25, 2021

ALX ONCOLOGY

PHASE 1A MDS: EVORPACEPT + AZACITIDINE FOR PREVIOUSLY UNTREATED HIGHER RISK (HR) MDS AND RELAPSED/REFRACTORY MDS

Initial Patients' Data Presented at ASH 2021

	Previously Untreated HR-MDS (N=6)	Previously Untreated HR-MDS with TP53 mutation (N=5)	Relapsed/Refractory MDS (N=9)#
ORR	3	3	5 *
CR	2	2	0
PR	0	0	0
Marrow CR	1 with HI	1 with HI	5 *
HI	0	0	0
SD	2	1	2
PD	1	1	1



Data Cutoff 25Oct2021; Response evaluable population (n=15); *includes 3 unconfirmed responses; #One subject with an unrelated G5 event prior to first disease assessment; On graphic, 2 subjects (1 Relapsed/Refractory and 1 Previously Untreated) with missing data and the previously described subject with an unrelated G5 event not represented.
ORR – Objective response rate; CR – Complete response; PR – Partial response; HI – Hematologic improvement; SD – Stable disease; PD – Disease progression

ALX ONCOLOGY

MDS TRIAL PLANS, ASPEN-02

Phase 1 Dose Escalation: Accrual Complete

Patients:

N~18

Relapsed/refractory and treatment naïve higher risk MDS (IPSS-R >3.5)

Treatment:

evorpacept
20 mg/kg (Q2W)
30 mg/kg (Q2W)
or 60 mg/kg (Q4W)
+
azacitidine

Endpoint:

- safety of combination

Phase 1 Dose Expansion: Open for Accrual

Patients:

N~40

Treatment naïve higher risk MDS (IPSS-R >3.5)

Treatment:

evorpacept
40 mg/kg (Q4W)
or 60 mg/kg (Q4W)
+
azacitidine

Endpoint:

- safety of combination

Phase 2 Randomized Trial

Patients:

Treatment naïve higher risk MDS (IPSS-R >3.5)

Treatment:

evorpacept
recommended phase 2 dose
+
azacitidine

vs.
azacitidine

Endpoint:

- complete response rate (CRR)

ALX ONCOLOGY

AML TRIAL PLANS, ASPEN-05

Phase 1 Dose Escalation and Expansion: Open for Accrual

Patients: **N~20+**

Relapsed/refractory AML or previously untreated AML who are not considered suitable for intensive induction therapy

Treatment

evorpacept
20 mg/kg (Q2W)
30 mg/kg (Q2W)
or 60 mg/kg (Q4W)

+ Venclexta
+ azacitidine

Endpoint:

- safety of combination, recommended phase 2 dose

Phase 2:

Patients: **N~84**

Previously untreated AML who are not considered suitable for intensive induction therapy

Treatment

evorpacept
recommended phase 2 dose

+ Venclexta
+ azacitidine

Endpoint:

- complete remission rate

ALX ONCOLOGY

Dosing schedules: Venclexta 400 mg PO daily; azacitidine 75 mg/m^2 daily for 7 days of 28-day cycle

ALX ONCOLOGY

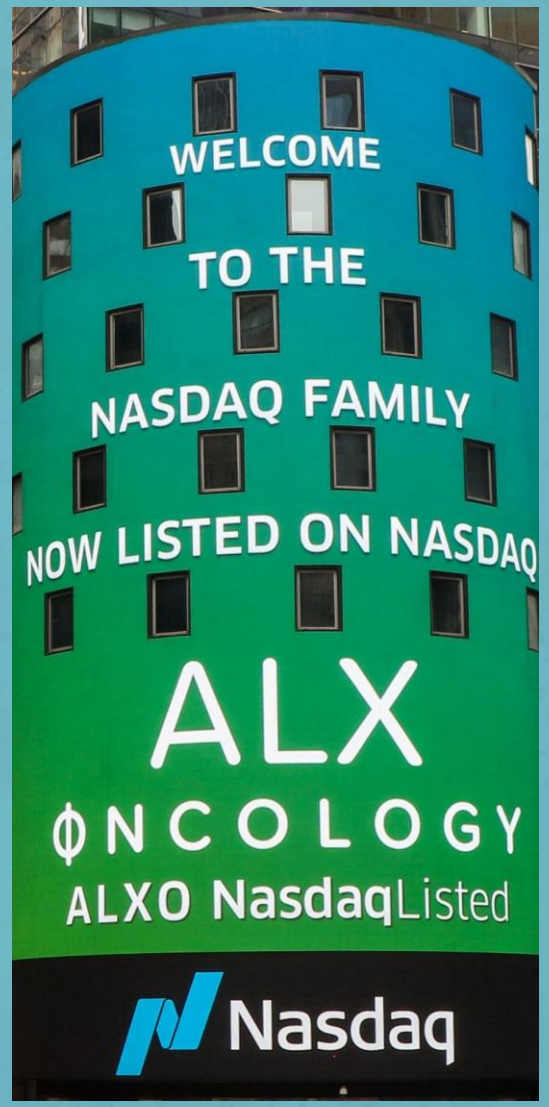
FINANCIAL INFORMATION

- Consummated IPO on July 21, 2020
- Closed follow-on offering on December 14, 2020
  - Gross proceeds of $208.0 million
  - 2.737 million shares at $76 per share
- Cash and cash equivalents as of December 31, 2021:
  - $363.7 million
- Expected cash runway through mid-2024

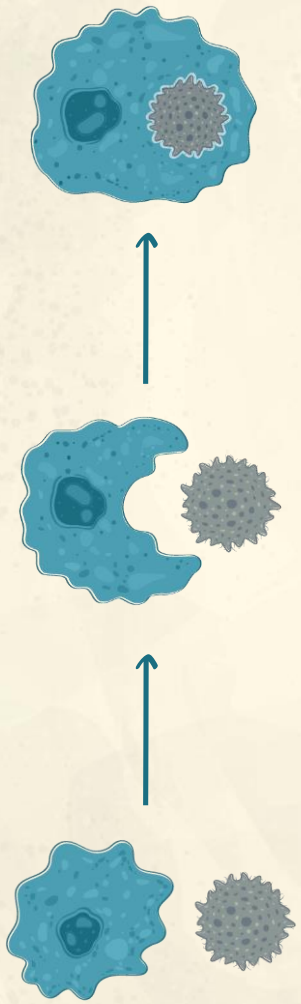


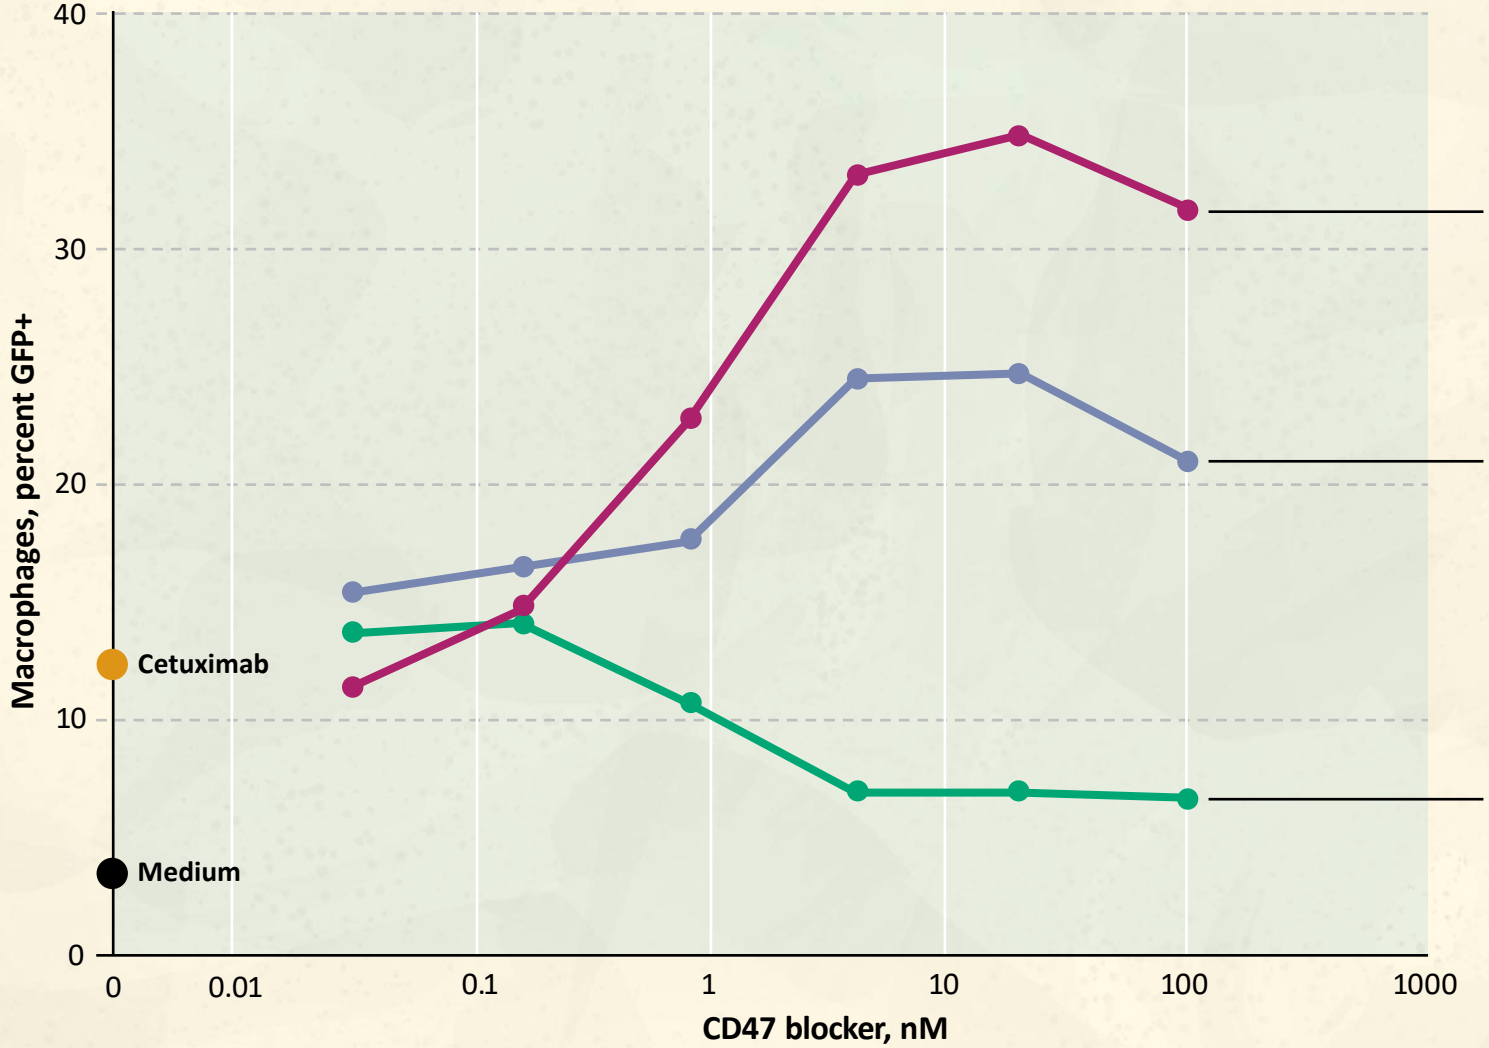
ALX ONCOLOGY

APPENDIX

ALX ONCOLOGY

EVORPACEPT DEMONSTRATES SUPERIOR PHAGOCYTOSIS





Evorpacept inactive Fc + Cetuximab

ADCP by cetuximab is enhanced by inactive Fc and high affinity

5F9 (Magrolimab) IgG4 + Cetuximab

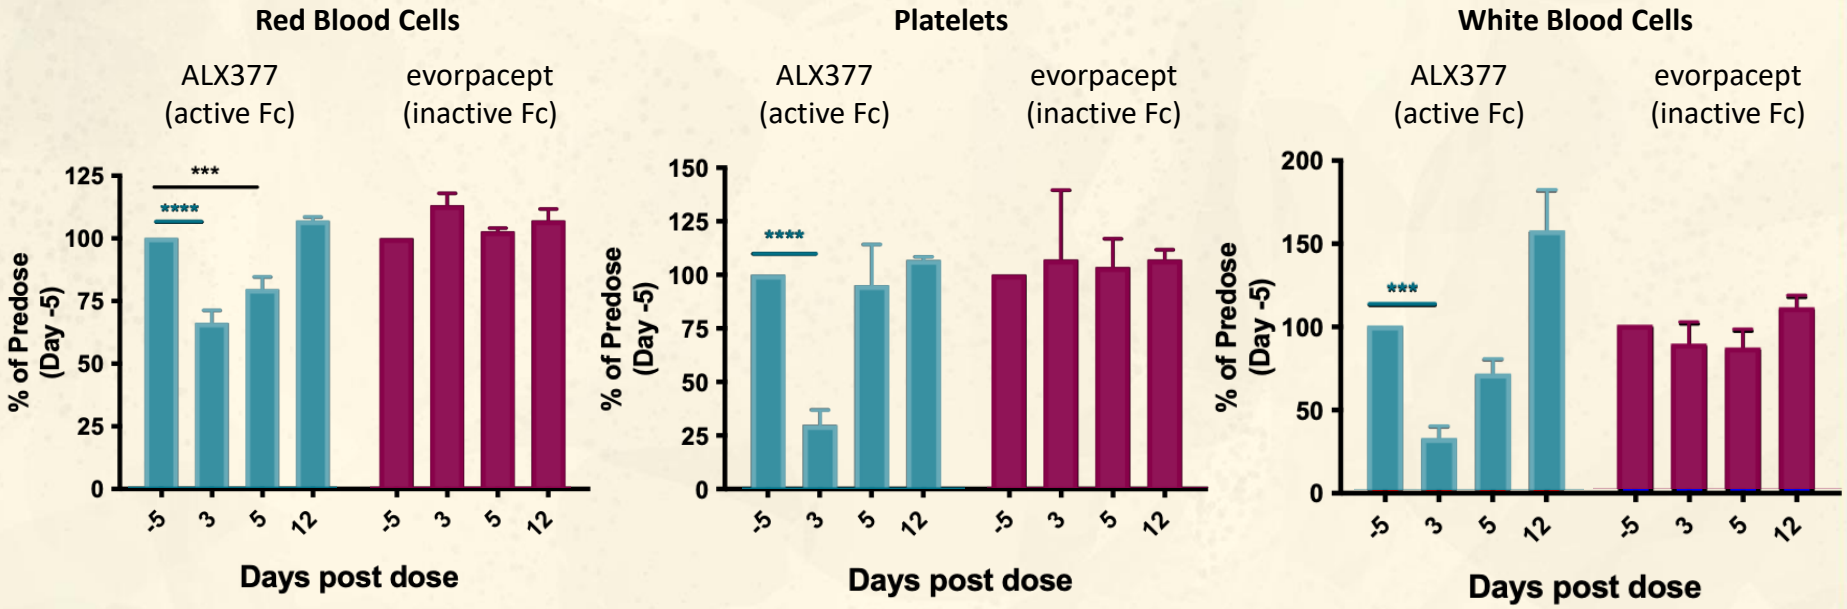
Enhances ADCP with cetuximab but at lower levels

TTI-621 IgG1 + Cetuximab

Does not enhance ADCP in combination with cetuximab

ALX ONCOLOGY

INACTIVE FC SHOWS REDUCED CYTOPENIA IN MICE IN VITRO



CD-1 mice received 30 mg/kg IV single dose

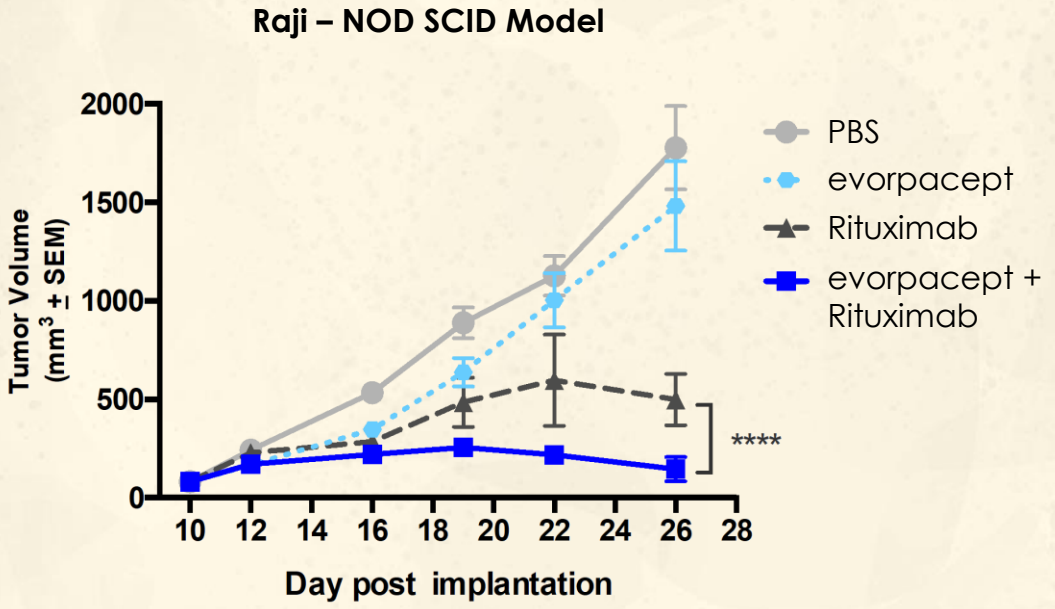
****p<0.0001, ***p<0.001

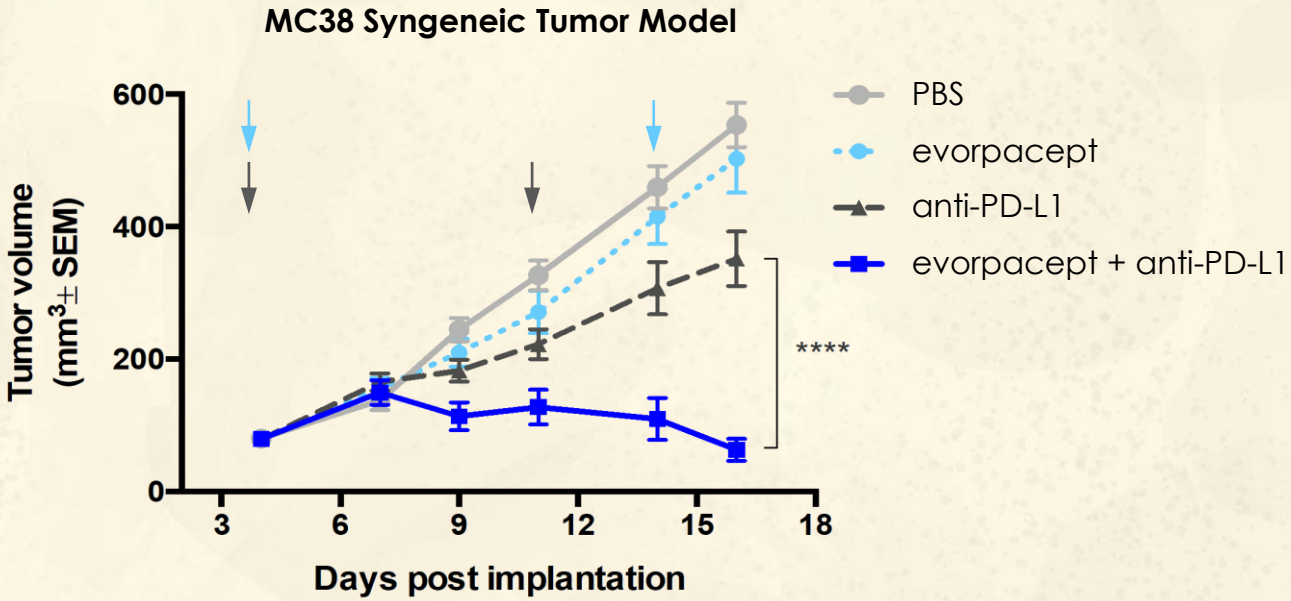
Inactive Fc is the core determinant of safety profile

Mouse cross-reactivity allows for safety and efficacy testing in mouse models

ALX ONCOLOGY

COMBINATION EFFICACY WITH TAA (RITUXIMAB) ANTIBODIES AND CHECKPOINT INHIBITOR (ATEZOLIZUMAB)



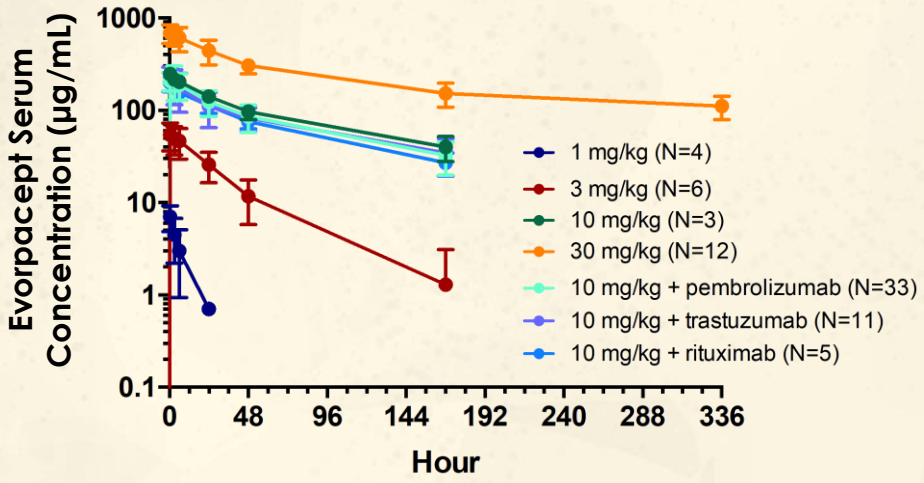


Mouse cross-reactivity allows for better clinical translation of preclinical models: presence of CD47 sink and mouse models with intact immune system

ALX ONCOLOGY

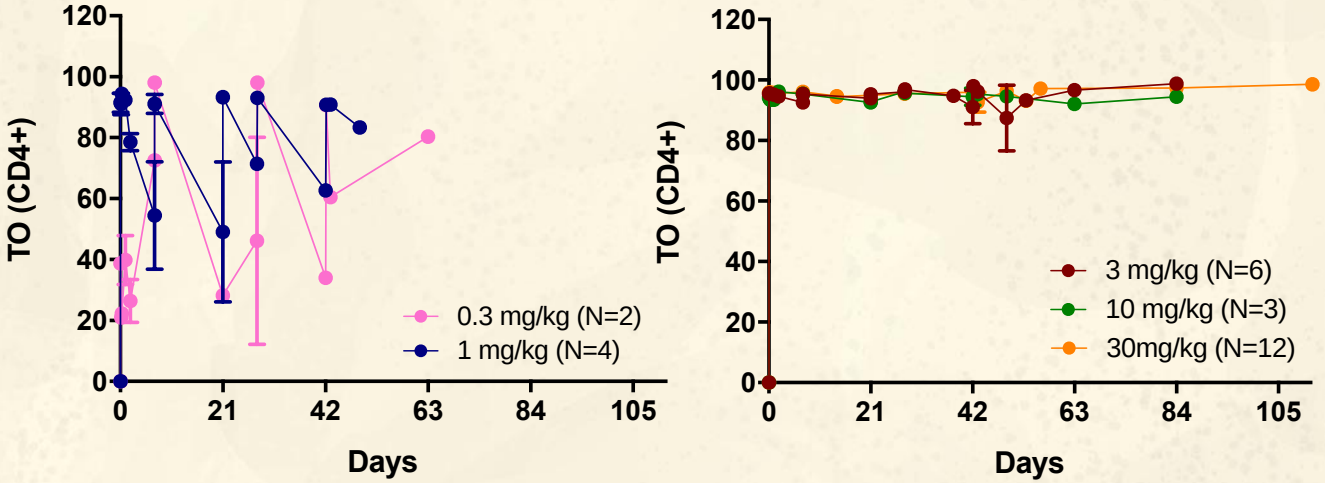
EVORPACEPT CLINICAL PHARMACOKINETICS AND CD47 TARGET OCCUPANCY

Evorpacept Serum Levels for Cycle 1 Day 1



- **Steady-state half-life of evorpacept at 10 mg/kg QW is predicted to be ~30 days.**
- Evorpacept PK profile is not impacted by combination drugs.

CD47 Target Occupancy by Evorpacept



- **Near complete CD47 target occupancy (TO) by evorpacept is maintained at ≥ 3 mg/kg QW across dosing interval**
- 0.3 and 1 mg/kg QW show near complete target occupancy at peak, but not at trough

ALX ONCOLOGY

NHL TOLERABILITY

Selected hematologic, treatment related adverse events	evorpacept + Rituximab (N=33)[1]		CC-90002 + Rituximab (n=26)[2]		5F9 (magrolimab) + Rituximab (n=115)[3]

ALX ONCOLOGY

EARLY STAGE PIPELINE: SIRPα-TRAAC COLLABORATION

ALX ONCOLOGY

ALX ONCOLOGY AND TALLAC THERAPEUTICS 50/50 JOINT COLLABORATION ON NOVEL SIRPα ANTIBODY – TLR9 AGONIST CONJUGATE (SIRPα TRAAC)

Provides SIRPα antibody

- CD47-SIPRα is a dominant myeloid checkpoint mechanism where SIRPα is expressed on myeloid and dendritic cells as well as on a range of tumor cells.
- SIRPα expression on tumor cells enables tumor microenvironment localization of SIRPα TRAAC.

Provides TRAAC platform and TLR9 agonist

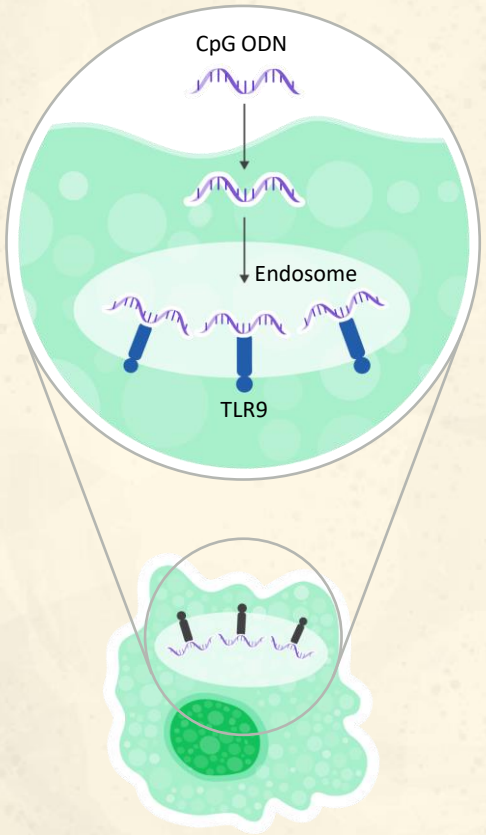
- Toll-like receptor 9 (TLR9) is a key receptor in the innate immune response.
- Synthetic CpG oligonucleotides (CpG ODNs) are potent TLR9 agonists that stimulate antitumoral cytokine production and immune activation.
- Novel Toll-like receptor agonist antibody conjugation platform (TRAAC) enables systemic delivery of targeted TLR9 activation.

SIRPα TRAAC induces targeted immune activation, bridging innate and adaptive immune responses.

SIRPα TRAAC simultaneously overrides "don't eat me" signals by blocking CD47-SIRPα myeloid checkpoint pathway and induces TLR9-based immune activation in antigen presenting cells (APCs).

TOLL-LIKE RECEPTOR 9 (TLR9): A KEY INNATE PATHWAY
PROOF-OF-CONCEPT DATA IN MELANOMA PATIENTS WITH INTRATUMORAL TLR9 AGONISTS

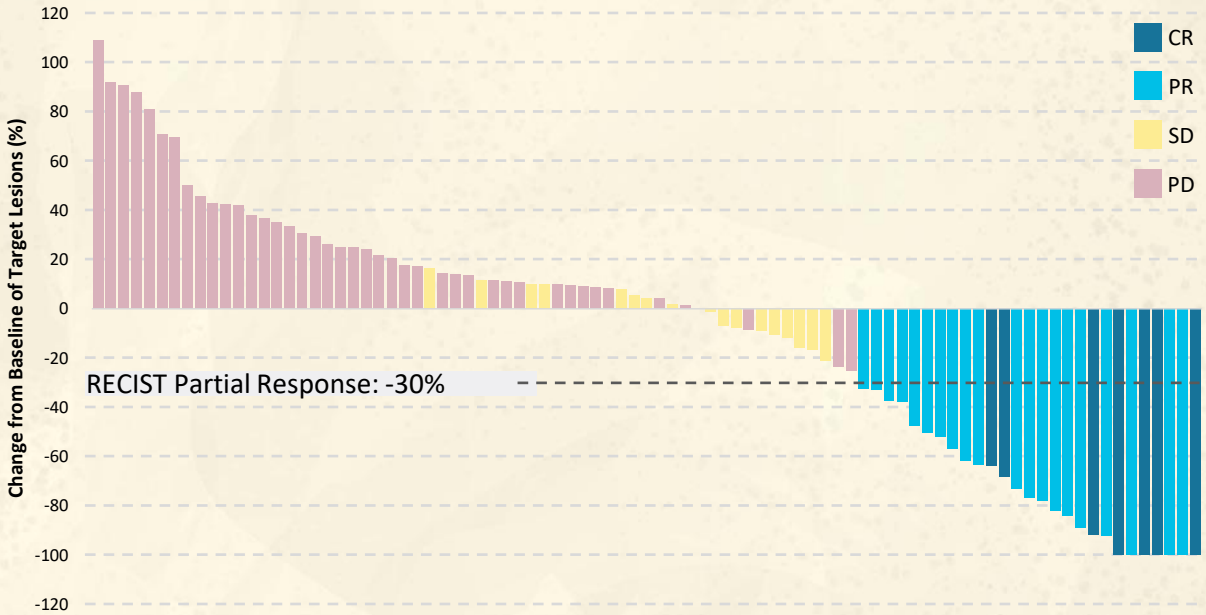
TLR9 stimulation by CpG ODN leads to immune cell activation



CpG ODN uptake

Immune activation

Intratumoral programs have demonstrated clinical activity



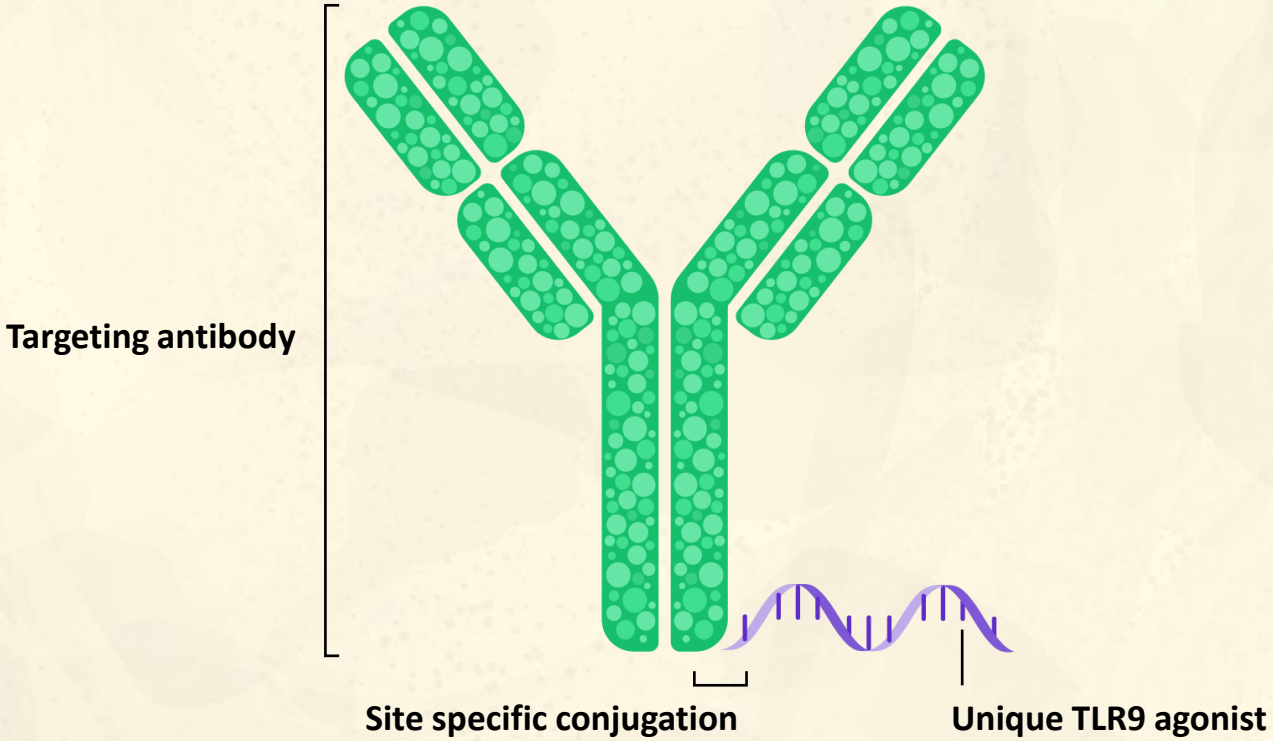
CMP-001 (Checkmate) + Pembrolizumab in Anti-PD-1 Refractory Melanoma, [1-4]Checkmate, S1 2020.

Additional clinical data from SD-101 (Dynavax), IMO-2125 (Idera) and AST-008 (Exicure) further validate TLR9 agonism in cancer.

ALX ONCOLOGY

TALLAC TRAAC PLATFORM: SYSTEMIC, TARGETED IMMUNE ACTIVATION
ANTIBODY DIRECTS TLR9 AGONIST (T-CPG) TO SPECIFIC IMMUNE CELLS

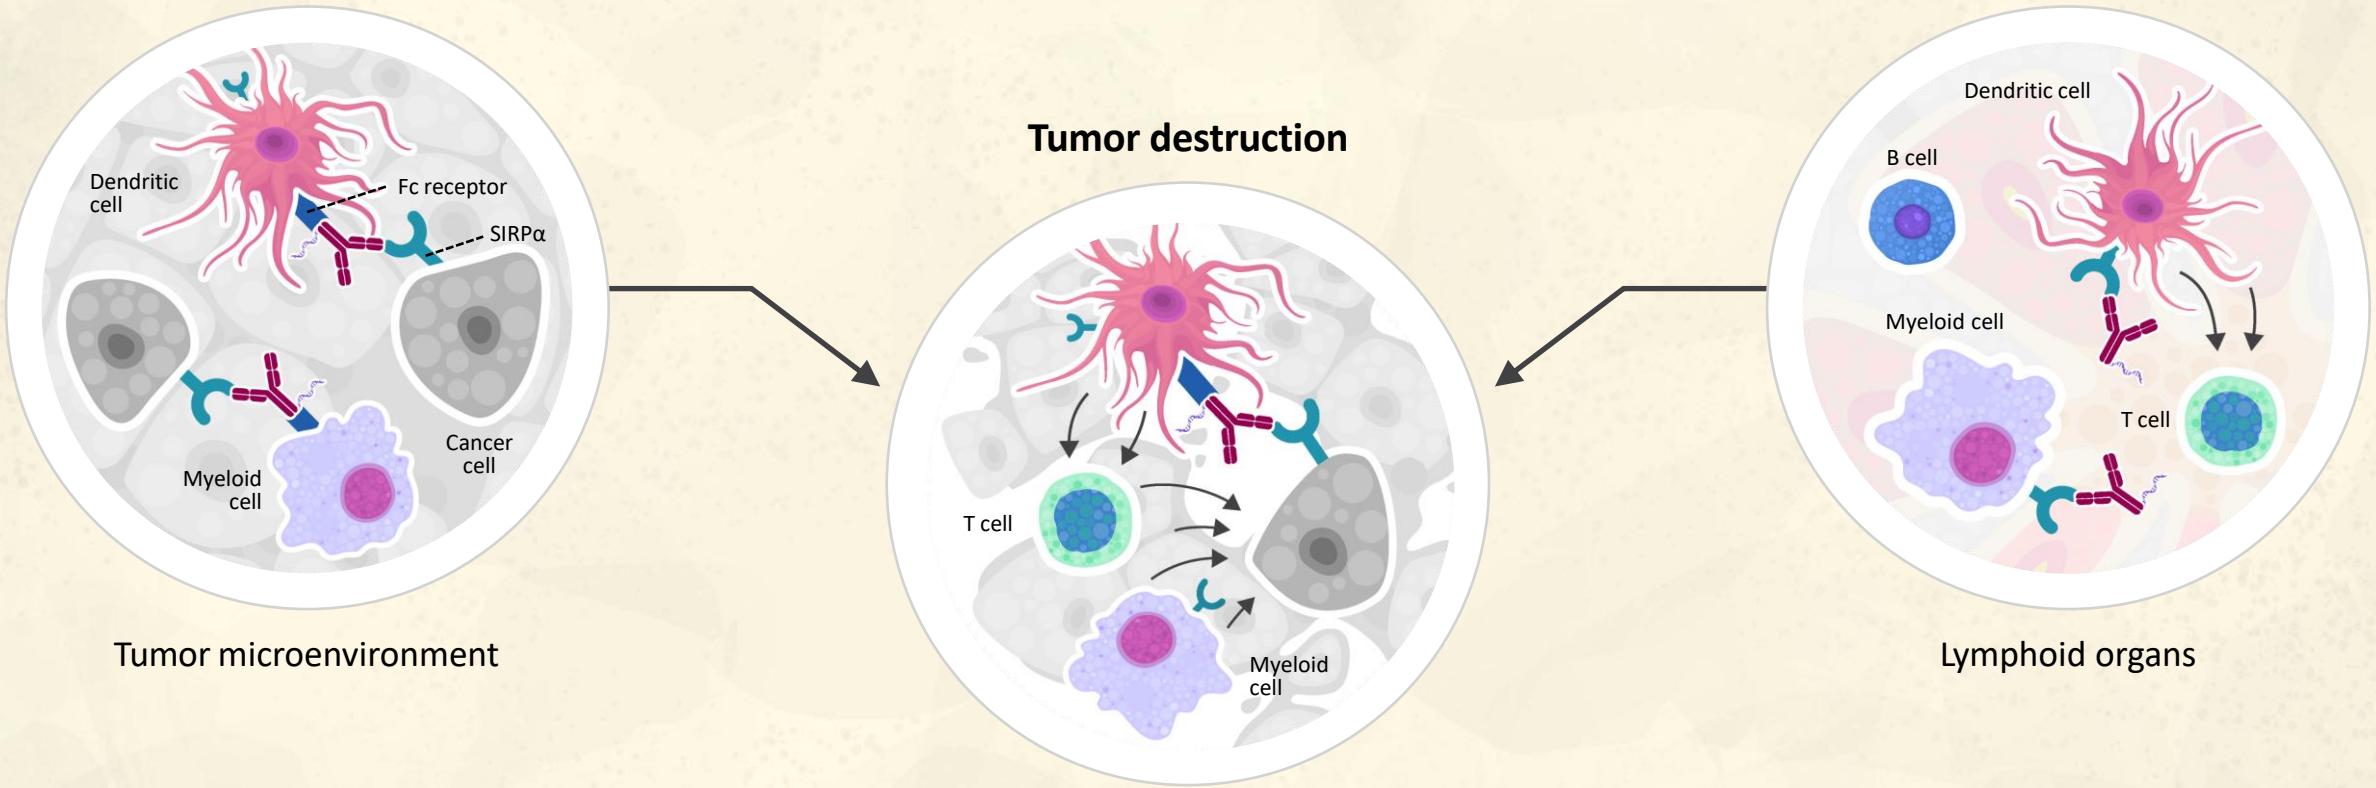
TLR9 Agonist Antibody Conjugate (TRAAC):
Systemic dosing with cell specific TLR9 activation



Targeted-CpG (T-CpG) designed specifically for compatibility with antibody conjugation, superior PK, receptor-mediated uptake and TLR9 stimulation

ALX ONCOLOGY

SIRPα IS EXPRESSED ON MYELOID AND DENDRITIC CELLS AS WELL AS SELECTED TUMOR TYPES



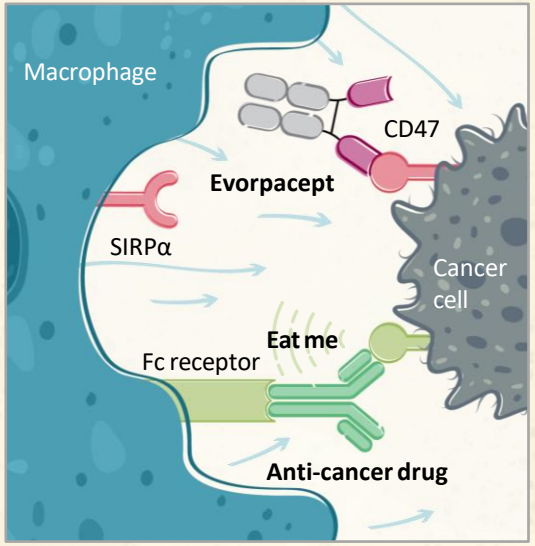
- SIRPα TRAAC binding to myeloid cells targets TLR9 activation in myeloid cells that matter (e.g. dendritic cells).
- SIRPα expression on tumor cells enables tumor microenvironment localization of SIRPα TRAAC.
- SIRPα TRAAC blocks CD47-SIRPα myeloid checkpoint pathway.

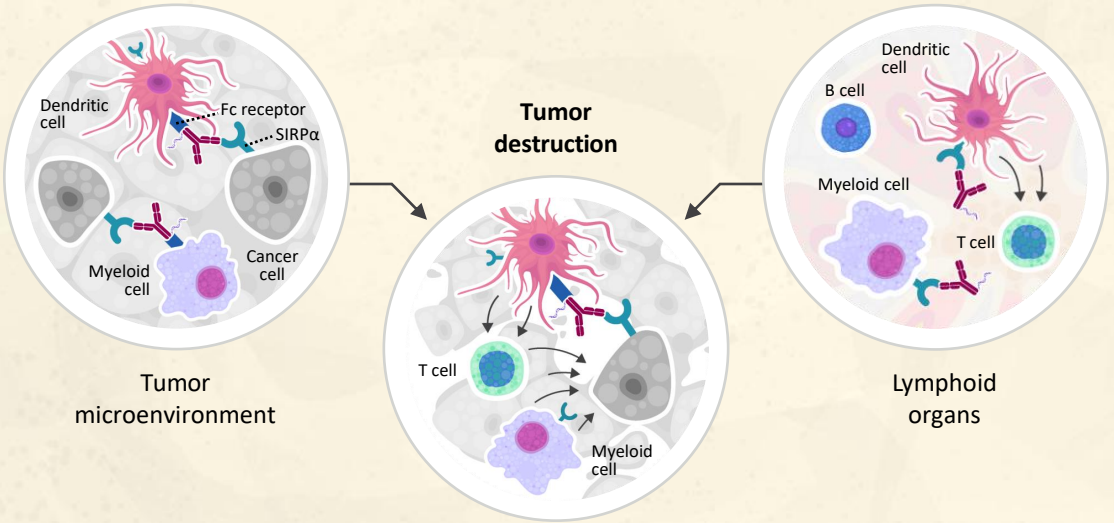
ALX ONCOLOGY

SIRPα TRAAC PROGRAM IS COMPLEMENTARY TO EVORPACEPT

Evorpacept is an antagonistic molecule designed to maximize the activity of a wide array of anti-cancer agents by blockade of the CD47 myeloid checkpoint.

Removal of the CD47 inhibitory signal requires constant, full blockade of the pathway.





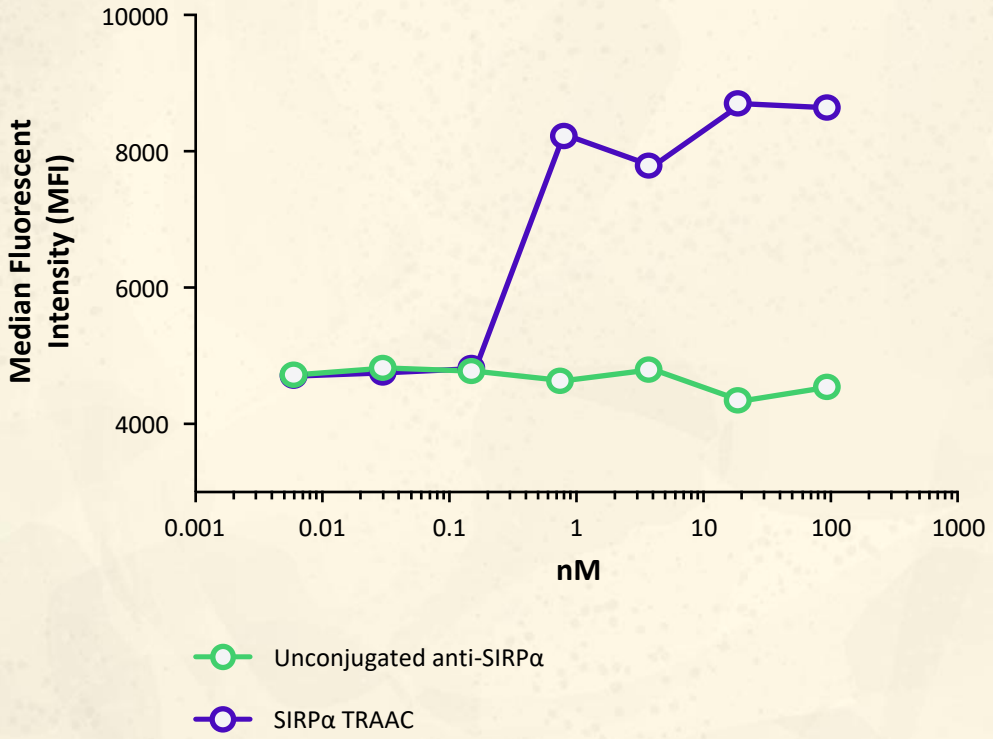
SIRPα TRAAC is an agonistic molecule that directly activates dendritic cells and initiates a coordinated innate and adaptive immune response against cancer.

In the case of agonistic molecules (TLR9 agonist), constant blockade is not required.

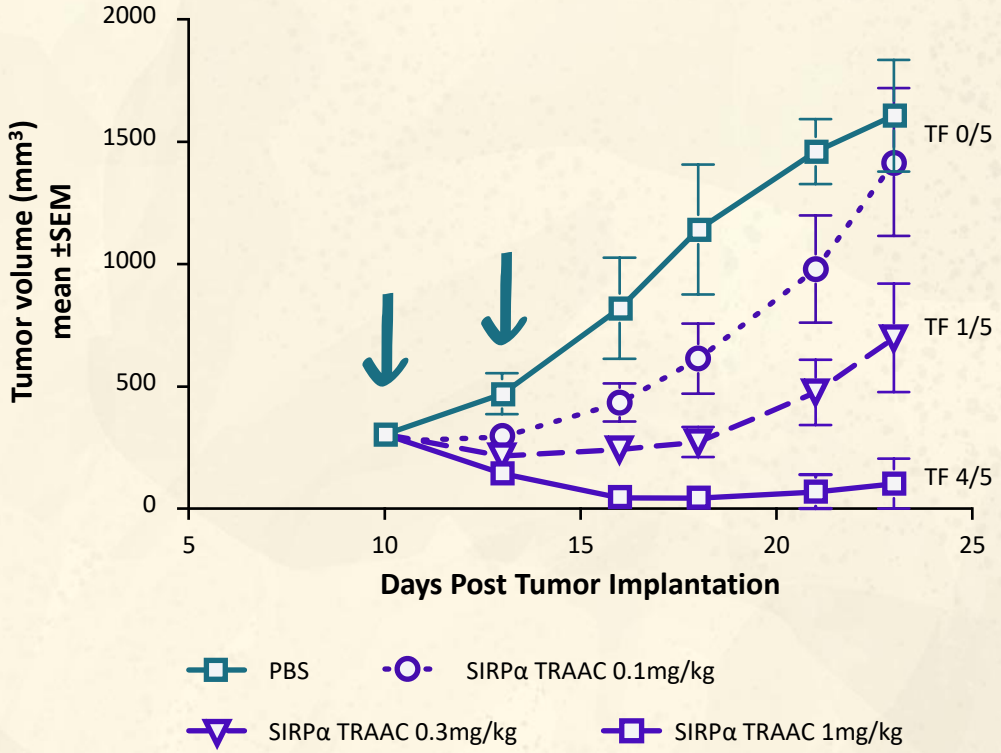
ALX ONCOLOGY

SIRPα TRAAC INDUCES POTENT AND SELECTIVE IMMUNE ACTIVATION AND LEADS TO POTENT SINGLE AGENT ACTIVITY IN TUMOR MODELS

Human dendritic cells
Activation Marker CD86



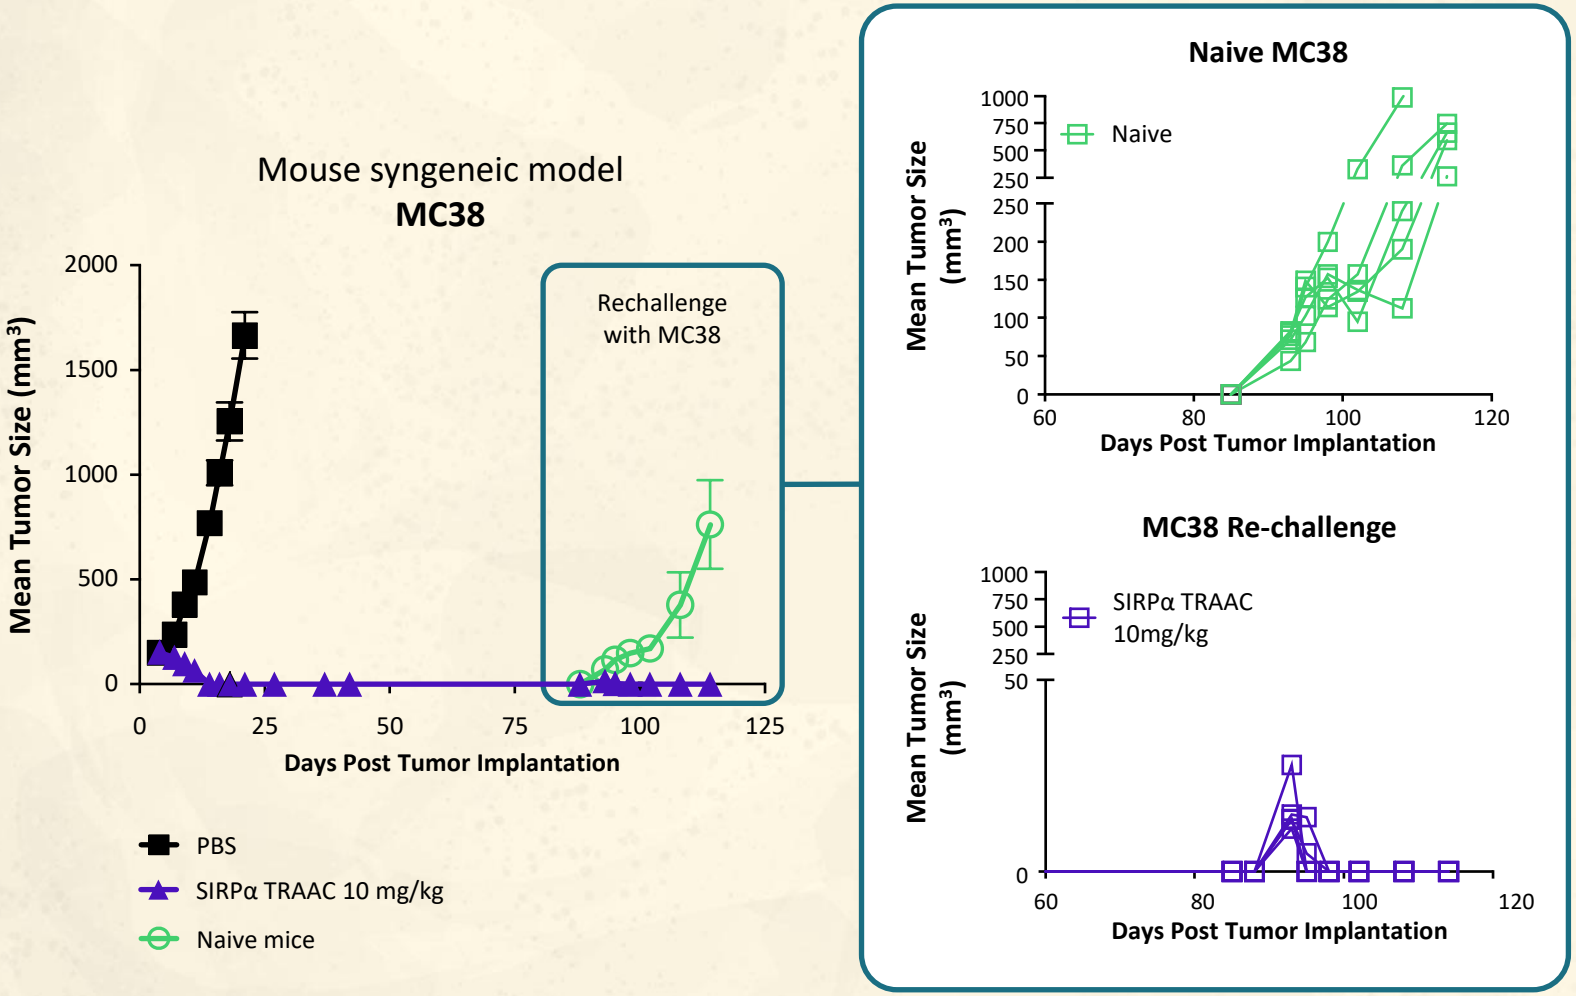
Mouse syngeneic model
CT26



Harrabi et al., SITC, 2020

ALX ONCOLOGY

SYSTEMIC ADMINISTRATION OF SIRPα TRAAC GENERATES DURABLE ANTI-TUMOR RESPONSE AND IMMUNOLOGICAL MEMORY

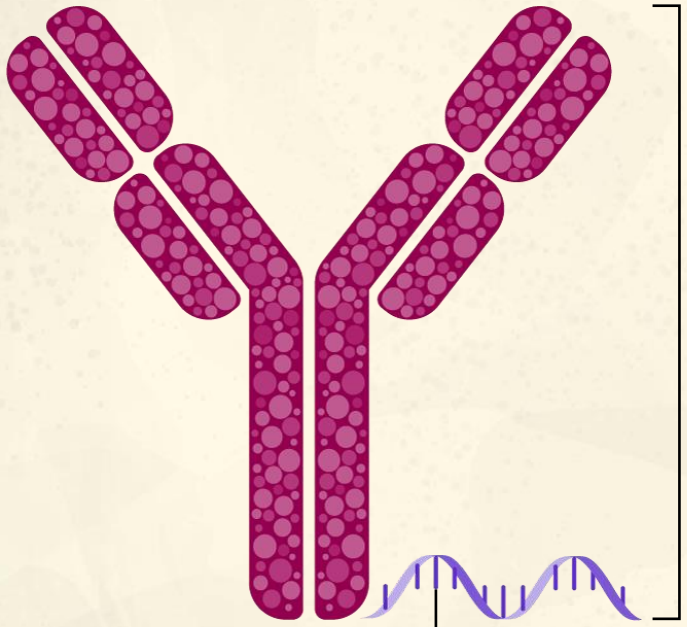


Harrabi et al., SITC, 2020

- Established MC38 tumors were eradicated following 10 mg/kg 2q3d systemic treatment with SIRPα TRAAC.
- These tumor free mice were then re-challenged 60-70 days post tumor clearance.
- SIRPα TRAAC treatment group demonstrated immune protection from the tumor re-challenge.
- Naïve age-matched mice were used as control for tumor growth.

ALX ONCOLOGY

ALTA-002: TARGETING IMMUNE ACTIVATION TO WHERE IT MATTERS

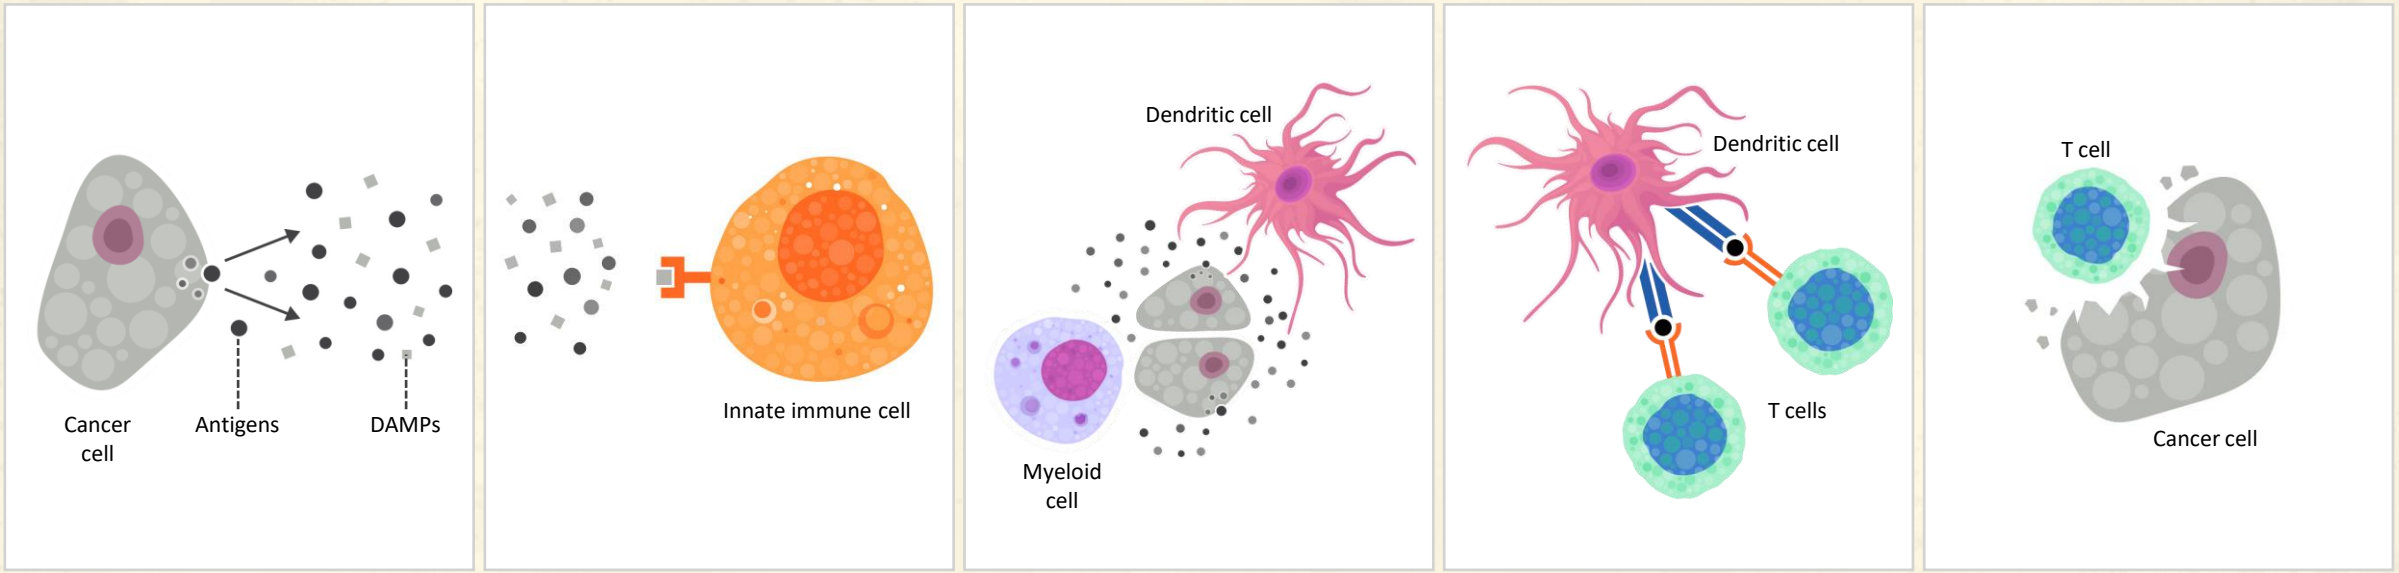


- SIRPα TRAAC binding to myeloid cells targets TLR9 activation in key myeloid cells (e.g. dendritic cells).
- SIRPα expression on tumor cells enables localization of SIRPα TRAAC to tumor microenvironment.
- SIRPα TRAAC blocks CD47-SIRPα myeloid checkpoint pathway.
- Antibody-like PK profile allows for convenient dosing.
- Antibody conjugate produced through established manufacturing processes.

IND expected beginning of 2023

ALX ONCOLOGY

HARNESSING THE POWER OF INNATE AND ADAPTIVE IMMUNE RESPONSES TO CANCER



1. Release of PAMPs/DAMPs and tumor antigens

2. Detection by PRRs on innate immune cells

3. Amplification of innate immune cell activation

4. Antigen presentation and activation of T cells

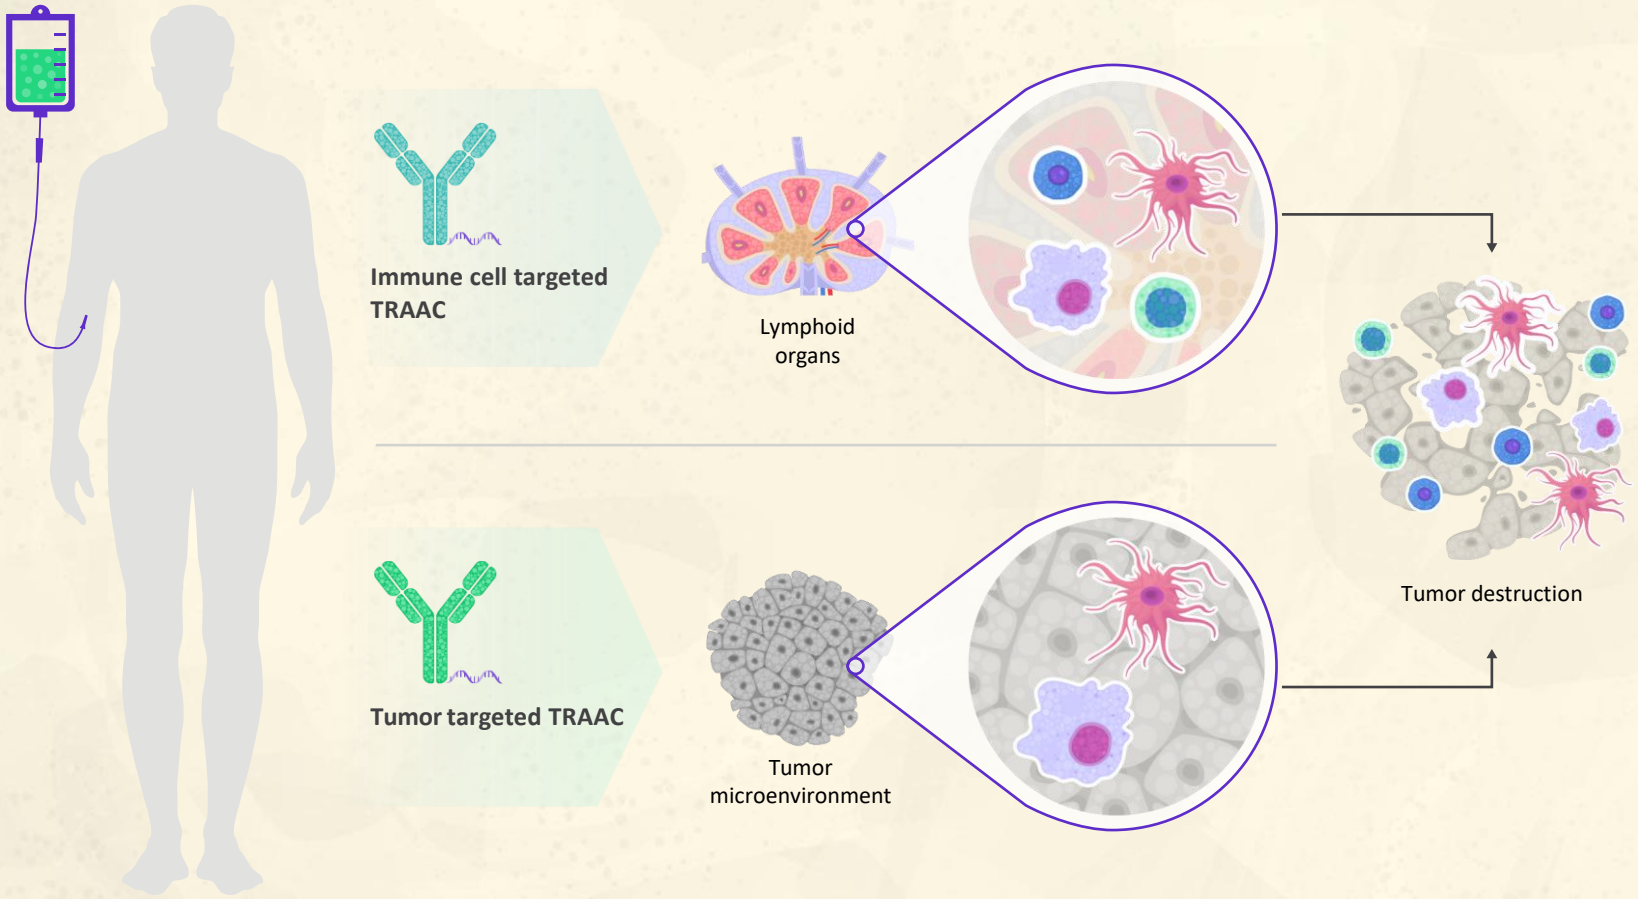
5. Recognition and elimination of tumor by T cells

- Successful immune-mediated elimination of cancer requires coordination between the innate and adaptive arms of the immune system.
- Innate immune cells (macrophages, myeloid cells and dendritic cells) may utilize a variety of signaling pathways, including TLR9, TLR7 or 8, STING and CD40, to trigger proinflammatory programs and engage the adaptive immune system.

DAMPs: damage-associated molecular patterns
PAMPs: pathogen-associated molecular patterns
PRRs: pattern recognition receptors

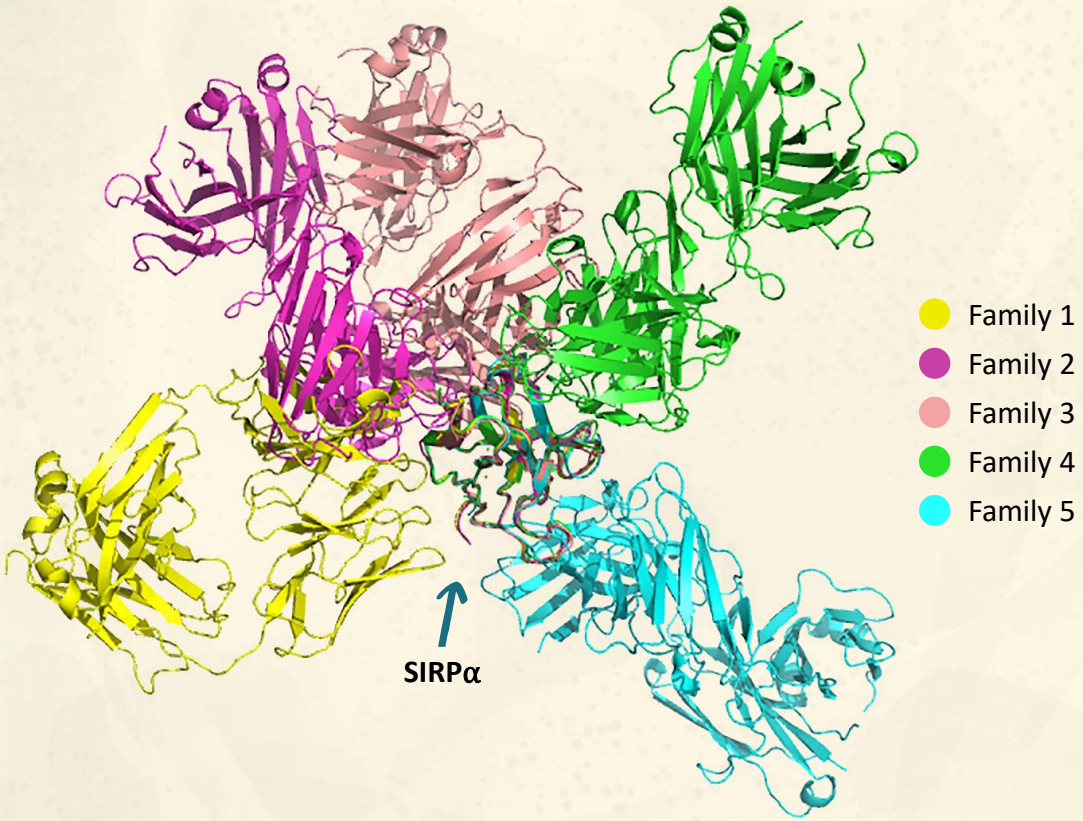
ALX ONCOLOGY

TLR9 AGONIST ANTIBODY CONJUGATE (TRAAC) ENABLES VERSATILE TARGETING OF IMMUNE CELLS THAT MATTER



ALX ONCOLOGY

ALX ONCOLOGY'S SIRPα ANTIBODIES: HIGH AFFINITY AND DIVERSE EPITOPES



ALX's diverse range of SIRPα antibodies

Diversity allows selection of best-in-class SIRPα antibodies:

- Binds human SIRPα variants V1 and V2
- Cross reacts with rodent, monkey and human SIRPα
- Wide range of affinities
- Full coverage of SIRPα domain 1 surface allows selection for optimal epitope
