

5 Year Autocallable Market-Linked Securities Linked to CIISDA5N

Preliminary Terms

This summary of terms is not complete and should be read with the preliminary pricing supplement below

Issuer:	Citigroup Global Markets Holdings Inc.
Guarantor:	Citigroup Inc.
Index:	The Citi Dynamic Asset Selector 5 Excess Return Index (ticker: "CIISDA5N")
Pricing date:	October 28, 2024
Valuation dates:	Annually, beginning approximately one year after issuance
Final valuation date:	October 29, 2029
Maturity date:	November 1, 2029
Upside participation rate:	100.00%
Automatic early redemption:	If on any valuation date prior to the final valuation date the closing level of the Index is greater than or equal to the initial index level, the securities will be automatically called for an amount equal to the principal plus the premium
Premium:	At least 6.25% per annum*
CUSIP / ISIN:	17333ALQ0 / US17333ALQ03
Initial index level:	The closing level of the Index on the pricing date
Final index level:	The closing level of the Index on the final valuation date
Index return:	$(\text{Final index level} - \text{initial index level}) / \text{initial index level}$
Return amount:	If the final index level is greater than the initial index level: $\$1,000 \times \text{the index return} \times \text{the upside participation rate}$ If the final index level is less than or equal to the initial index level: \$0
Payment at maturity (if not autocalled):	All payments on the securities are subject to the credit risk of Citigroup Global Markets Holdings Inc. and Citigroup Inc. If the securities are not automatically redeemed prior to maturity, you will receive at maturity for each security you then hold, the stated principal amount plus the return amount, which will be either zero or positive
Stated principal amount:	\$1,000 per security
Preliminary pricing supplement:	Preliminary Pricing Supplement dated September 30, 2024

* The actual premium will be determined on the pricing date.

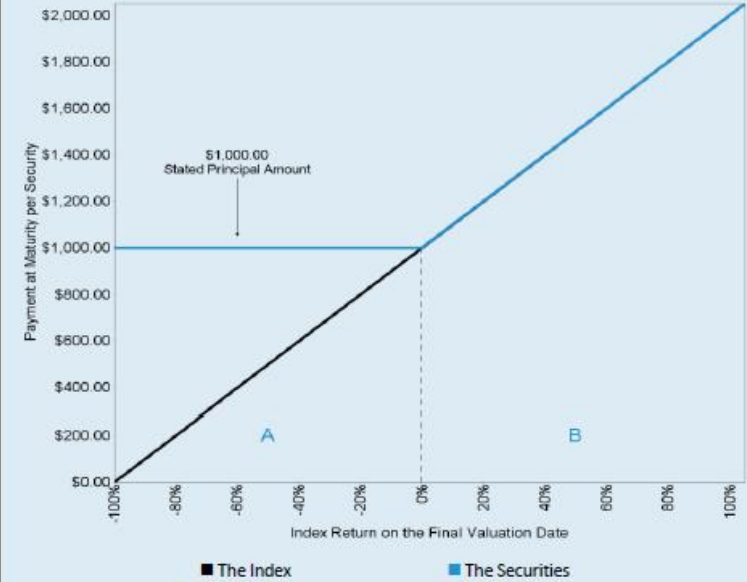

Hypothetical Interim Payment per Security**

Valuation Date on which the Closing Level of the Index Equals or Exceeds Initial Index Level	Premium	Hypothetical Redemption
October 28, 2025	6.25%	\$1,062.50
October 28, 2026	12.50%	\$1,125.00
October 28, 2027	18.75%	\$1,187.50
October 30, 2028	25.00%	\$1,250.00

If the closing level of the Index is not greater than or equal to the initial index level on any interim valuation date, then the securities will not be automatically redeemed prior to maturity and you will not receive a premium.

** The hypotheticals assume that the premium will be set at the lowest value indicated in this offering summary.

Hypothetical Payment at Maturity per Security

Assumes the securities have not been automatically redeemed prior to maturity.

	Hypothetical Index Return on Final Valuation Date	Hypothetical Security Return	Hypothetical Payment at Maturity
	50.00%	50.00%	\$1,500.00
B	25.00%	25.00%	\$1,250.00
	5.00%	5.00%	\$1,050.00
	0.00%	0.00%	\$1,000.00
A	-25.00%	0.00%	\$1,000.00
	-50.00%	0.00%	\$1,000.00
	-100.00%	0.00%	\$1,000.00

Key Features of the Index

- Created by Citigroup Global Markets Limited and launched on June 13, 2016.
- Tracks the hypothetical performance of a rules-based investment methodology that, on each Index Business Day, seeks to identify current U.S. equity market conditions as falling within one of four possible "Market Regimes" based on trend and volatility Signals. Depending on the identified Market Regime, Index exposure is allocated to one of three possible hypothetical investment "Portfolios", each consisting of varying degrees of exposure to the following two "Constituents":

Constituent	Underlying Futures Contract	Reference Asset
S&P 500 Futures Excess Return Index ("U.S. Equity Futures Constituent")	E-mini S&P 500 Futures	S&P 500 Index
S&P 10-Year U.S. Treasury Note Futures Excess Return Index ("U.S. Treasury Futures Constituent")	10-Year U.S. Treasury Note Futures	10-Year U.S. Treasury Notes

- Each Constituent tracks a hypothetical investment, rolled quarterly, in the nearest-to-expiration futures contract on the Reference Asset indicated in the table above.
- The Index relies on backward-looking trend and volatility Signals to determine which Market Regime is currently in effect and, in turn, which Portfolio to track until there is a change in the Market Regime (the Portfolio tracked at any time referred to as the "Selected Portfolio").
- On each Index Business Day, the Index calculates:
 - Trend Signal:** The trend of the performance of the U.S. Equity Futures Constituent over a look-back period of 21 Index Business Days (approximately one month), measured by a linear regression methodology. The Trend Signal will be either "upward" or "downward".
 - Volatility Signal:** The realized volatility of the U.S. Equity Futures Constituent over a lookback period of 63 Index Business Days (approximately three months).
- The following table indicates the Market Regime that will be identified for each possible combination of Signals and, for each Market Regime, the corresponding Portfolio that will be selected as the Selected Portfolio to be tracked until the next change in Market Regime.

Signals	Market Regime	Selected Portfolio
Trend Signal: Upward Volatility Signal: $\leq 15\%$	Stable-Trending Up	Equity-Focused Portfolio > U.S. Equity Futures Constituent: 66.66% > U.S. Treasury Futures Constituent: 33.33%
Trend Signal: Upward Volatility Signal: $> 15\%$	Unstable-Trending Up	Intermediate Portfolio > U.S. Equity Futures Constituent: 33.33% > U.S. Treasury Futures Constituent: 66.66%
Trend Signal: Downward Volatility Signal: $\leq 15\%$	Stable-Trending Down	
Trend Signal: Downward Volatility Signal: $> 15\%$	Unstable-Trending Down	Treasury Portfolio > U.S. Equity Futures Constituent: 0.00% > U.S. Treasury Futures Constituent: 100.00%

- If the Trend Signal fails to meet a test of statistical significance, then a change in Market Regime will not occur and the Selected Portfolio will not change, even if the Signals otherwise call for a change.
- Index fee of 0.85% per annum is deducted daily from Index performance.
- "Volatility target" feature may reduce Index exposure to Selected Portfolio if and as necessary to maintain a 21-day realized volatility $\leq 5\%$. If the Index exposure to the Selected Portfolio is less than 100%, the difference will be hypothetically allocated to cash (accruing no interest).

Selected Risk Considerations

- You may not receive any return on your investment in the securities. If the closing level of the index is not greater than or equal to the initial index level on any valuation date prior to the final valuation date, then the securities will not be automatically redeemed at a premium. In that event, you will receive a positive return on your investment in the securities only if the index appreciates from the initial index level to the final index level. If the final index level is less than or equal to the initial index level, you will receive only the stated principal amount for each security you hold at maturity.
- Your potential return on the securities in connection with an automatic early redemption is limited.
- The term of the securities may be as short as one year.
- The securities do not pay interest.
- Your return on the securities depends on the closing level of the index on only the valuation dates.
- The securities are subject to the credit risk of Citigroup Global Markets Holdings Inc. and Citigroup Inc. If Citigroup Global Markets Holdings Inc. defaults on its obligations under the securities and Citigroup Inc. defaults on its guarantee obligations, you may not receive anything owed to you under the securities.
- Sale of the securities prior to maturity may result in a loss of principal.
- The securities will not be listed on any securities exchange and you may not be able to sell them prior to maturity.
- The estimated value of the securities on the pricing date will be less than the issue price. For more information about the estimated value of the securities, see the accompanying preliminary pricing supplement.
- The value of the securities prior to maturity will fluctuate based on many unpredictable factors.
- The issuer and its affiliates may have conflicts of interest with you.
- The Index is a trend-following index and is subject to the limitations inherent in all trend-following methodologies, including the fact that past performance is no guarantee of future performance. Furthermore, the index's trend-following methodology may be unsuccessful even if past trends do prove to be indicative of future performance, because the Trend Signal may not accurately capture the trend or the index may not change its Selected Portfolio quickly enough in response to changes in the Market Regime.
- Each Constituent is a futures-based index and is therefore expected to reflect the implicit cost of a financed position in its Reference Asset. This implicit financing cost will adversely affect the level of each Constituent and cause each Constituent to underperform its Reference Asset. Any increase in market interest rates will be expected to increase this implicit financing cost and will further adversely affect the performance of the Constituents and, therefore, the performance of the Index.
- The Index rules limit the exposure the index may have to the U.S. Equity Futures Constituent and, as a result, the Index is likely to significantly underperform equities in rising equity markets.
- The Index will have significant exposure to the U.S. Treasury Futures Constituent, which has limited return potential and significant downside potential, particularly in times of rising interest rates.
- The volatility-targeting feature significantly reduces the potential for Index gains. At any time when the Index has less than 100% exposure to the Selected Portfolio, the Index will participate in only a limited degree of the performance of the Selected Portfolio.
- The Index's allocation methodology may not be successful if the U.S. Equity Futures Constituent and the U.S. Treasury Futures Constituent decline at the same time.
- The Index may fail to maintain its volatility target. Because there is a time lag inherent in the Index's volatility targeting feature, the Index may retain significant exposure to the U.S. Equity Futures Constituent long after a period of heightened volatility has begun, which may result in significant index declines.
- The performance of the Index will be reduced by an index fee.
- The Index was launched on June 13, 2016 and, therefore, has a limited performance history.
- The Index follows fixed rules and will not be actively managed.

The above summary of selected risks does not describe all of the risks associated with an investment in the securities. You should read the accompanying preliminary pricing supplement and index supplement

Additional Information

Citigroup Global Markets Holdings Inc. and Citigroup Inc. have filed registration statements (including the accompanying preliminary pricing supplement, index supplement, prospectus supplement and prospectus) with the Securities and Exchange Commission ("SEC") for the offering to which this communication relates. Before you invest, you should read the accompanying preliminary pricing supplement, index supplement, prospectus supplement and prospectus in those registration statements (File Nos. 333-270327 and 333-270327-01) and the other documents Citigroup Global Markets Holdings Inc. and Citigroup Inc. have filed with the SEC for more complete information about Citigroup Global Markets Holdings Inc., Citigroup Inc. and this offering. You may obtain these documents without cost by visiting EDGAR on the SEC website at www.sec.gov. Alternatively, you can request these documents by calling toll-free 1-800-831-9146.

Filed pursuant to Rule 433

This offering summary does not contain all of the material information an investor should consider before investing in the securities. This offering summary is not for distribution in isolation and must be read together with the accompanying preliminary pricing supplement and the other documents referred to therein, which can be accessed via the link on the first page.
