Contingent coupon:	Approximately 7.25% per annum, paid monthly only if the closing value of the worst performer is greater than or equal to its coupon barrier value on the related valuation date. You are not assured of receiving any contingent coupon. If the closing value of the worst performer on one or more valuation dates is less than its coupon barrier value and, on a subsequent valuation date, the closing value of the worst performer on that subsequent valuation date is greater than or equal to its coupon barrier value, your contingent coupon payment for that subsequent valuation date will include all previously unpaid contingent coupon payments
Coupon barrier value:	For each underlying, 65.00% of its initial underlying value
Final buffer value:	For each underlying, 85.00% of its initial underlying value
Buffer percentage:	15.00%
Automatic early redemption:	If on any autocall date the closing value of the worst performer is greater than or equal to its initial underlying value, the securities will be automatically called for an amount equal to the principal plus the related contingent coupon
Autocall dates:	Monthly on valuation dates beginning after one year
CUSIP / ISIN:	17332MK60 / US17332MK606
Initial underlying value:	For each underlying, its closing value on the pricing date
Final underlying value:	For each underlying, its closing value on the final valuation date
Underlying return:	For each underlying on any valuation date, (i) its current closing value minus initial underlying value, divided by (ii) its initial underlying value
Worst performer:	On any valuation date, the underlying with the lowest underlying return
Payment at maturity (if not autocalled):	<ul style="list-style-type: none"> * If the final underlying value of the worst performer is greater than or equal to its final buffer value: \$1,000 * If the final underlying value of the worst performer is less than its final buffer value: \$1,000 + [\$1,000 × (the underlying return of the worst performer on the final valuation date + the buffer percentage)] <p>If the securities are not automatically redeemed prior to maturity and the final underlying value of the worst performer on the final valuation date is less than its final buffer value, which means that the worst performer on the final valuation date has depreciated from its initial underlying value by more than the buffer percentage, you will lose 1% of the stated principal amount of your securities at maturity for every 1% by which that depreciation exceeds the buffer percentage.</p> <p>All payments on the securities are subject to the credit risk of Citigroup Global Markets Holdings Inc. and Citigroup Inc.</p>
Stated principal amount:	\$1,000 per security
Preliminary pricing supplement:	Preliminary Pricing Supplement dated August 15, 2024

* Assumes the interim valuation date is also an autocall date.

** Plus any previously unpaid contingent coupon payments.

Selected Risk Considerations

- You may lose a significant portion of your investment. Unlike conventional debt securities, the securities do not provide for the repayment of the stated principal amount at maturity in all circumstances. If the securities are not automatically redeemed prior to maturity, your payment at maturity will depend on the final underlying value of the worst performer on the final valuation date. If the final underlying value of the worst performer on the final valuation date is less than its final buffer value, which means that the worst performer on the final valuation date has depreciated from its initial underlying value by more than the buffer percentage, you will lose 1% of the stated principal amount of your securities for every 1% by which that depreciation exceeds the buffer percentage.
- You will not receive any contingent coupon following any valuation date on which the closing value of the worst performer on that valuation date is less than its coupon barrier value. You will only receive a contingent coupon payment that has not been paid on a subsequent contingent coupon payment date if and only if the closing value of the worst performer on the related valuation date is greater than or equal to its coupon barrier value.
- The securities are subject to heightened risk because they have multiple underlyings.
- The return on the securities depends solely on the performance of the worst performer. As a result, the securities are subject to the risks of each of the underlyings and will be negatively affected if any one underlying performs poorly.
- You will be subject to risks relating to the relationship between the underlyings. The less correlated the underlyings, the more likely it is that any one of the underlyings will perform poorly over the term of the securities. All that is necessary for the securities to perform poorly is for one of the underlyings to perform poorly.
- The securities may be automatically redeemed prior to maturity, limiting your opportunity to receive contingent coupons if the worst performer performs in a way that would otherwise be favorable.
- The securities offer downside exposure, but no upside exposure, to the underlyings.
- The securities are particularly sensitive to the volatility of the closing values of the underlyings on or near the valuation dates.
- The securities are subject to the credit risk of Citigroup Global Markets Holdings Inc. and Citigroup Inc. If Citigroup Global Markets Holdings Inc. defaults on its obligations under the securities and Citigroup Inc. defaults on its guarantee obligations, you may not receive anything owed to you under the securities.
- The securities will not be listed on any securities exchange and you may not be able to sell them prior to maturity.
- The estimated value of the securities on the pricing date will be less than the issue price. For more information about the estimated value of the securities, see the accompanying preliminary pricing supplement.
- The value of the securities prior to maturity will fluctuate based on many unpredictable factors.
- The S&P 500 Dynamic Participation Index is likely to significantly underperform the S&P 500® Index in a sustained falling U.S. equity market.
- The S&P 500 Dynamic Participation Index is more volatile than the S&P 500® Index, which increases the riskiness of the securities.
- The VanEck® Semiconductor ETF is subject to risks associated with the semiconductor production and equipment sector.
- The issuer and its affiliates may have conflicts of interest with you.
- In the case of an underlying that is an underlying ETF, even if the underlying pays a dividend that it identifies as special or extraordinary, no adjustment will be required under the securities for that dividend unless it meets the criteria specified in the accompanying product supplement.
- In the case of an underlying that is an underlying ETF, the securities will not be adjusted for all events that may have a dilutive effect on or otherwise adversely affect the closing value of the underlying.
- In the case of an underlying that is an underlying ETF, the securities may become linked to an underlying other than the original underlying upon the occurrence of a reorganization event or upon the delisting of the underlying shares of that original underlying.
- In the case of the underlying that is an underlying ETF, the value and performance of the underlying shares of the underlying may not completely track the performance of the underlying index that the underlying seeks to track or the net asset value per share of the underlying.
- The U.S. federal tax consequences of an investment in the securities are unclear.

The above summary of selected risks does not describe all of the risks associated with an investment in the securities. You should read the accompanying preliminary pricing supplement and product supplement for a more complete description of risks relating to the securities.
