Disclaimer

This presentation includes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Statements which are not historical facts are forward-looking statements. The Company makes forward-looking public statements concerning its expected future financial position, results of operations, cash flows, financing plans, business strategy, products and services, research and development, alternative health projects or products, clinical trials, regulatory approvals, competitive positions, growth opportunities, plans and objectives of management for future operations, including statements that include words such as "anticipate," "if," "believe," "plan," "estimate," "expect," "intend," "may," "could," "should," "will," and other similar expressions that are forward-looking statements. Such forward-looking statements are estimates reflecting the Company's best judgment based upon current information and involve a number of risks and uncertainties, and there can be no assurance that other factors will not affect the accuracy of such forward-looking statements including, without limitation, foreign exchange and other financial markets; changes of the interest rates on borrowings; whether or not the Company will be successful in executing its business plan in whole or in part; hedging activities; changes in commodity prices; changes in the marketing or capital project expenditure levels; litigation; legislation; environmental, judicial, regulatory, political and competitive developments in areas in which Lexaria Bioscience Corp. operates. These and other risks and uncertainties are more fully described in our periodic reports and other disclosure documents filed by Lexaria Bioscience Corp. from time to time with regulatory authorities available on SEDAR+ at <http://www.sedarplus.ca/> and on EDGAR at www.sec.gov, and the reader is encouraged to review these documents. Planned dates stated herein are estimates only, based on best information available. Dates are not assured and are subject to revision without notice. The Company assumes no obligation, except as required by law, to update any forward-looking statement, whether as a result of new information, future events or otherwise. This presentation is not an offer to sell or a solicitation of an offer to buy securities of Lexaria Bioscience Corp. It is a short summary of certain information for introductory purposes only and is not to be relied upon for investment purposes.

No statement within has been evaluated by the Food and Drug Administration, and no product or service is yet commercially approved and intended to diagnose, treat, cure or prevent any disease.

Lexaria's Drug Delivery Platform Technology 01

DehydraTECH - Lexaria's Drug Delivery Platform Technology

- **Enhances the pharmacokinetic performance** of Active Pharmaceutical Ingredients (“APIs”) into the **bloodstream** and into **brain tissue**, increasing bioavailability, improving speed of onset and increasing brain absorption;
- **Multiple & applications** in weight loss, diabetes, hypertension and others;
- Can be applied **multiple oral/intraoral product formats** such as tablets, capsules, oral suspensions, mouth-melts and others, and also to **topicals**;
- Focused on commercialization through **partnerships, licensing** and **internal development**;
- Awarded **43 patents granted** and many more pending around the world for use with a broad range of bioactive molecules.

2024 Catalysts:

GLP-1 (Diabetes/Weight Loss):

- April - Long Term Stability & Mode of Action Testing
- May - Human Pilot Study #2: GLP-1-H24-2
- May - Animal Study: WEIGHT-A24-1
- June - Human Pilot Study #3: GLP-1-H24-3
- July - Human Study: GLP-1-H24-4

Hypertension:

- FDA Investigational New Drug opening study HYPER-H23-1

DehydraTECH Mechanism of Action

Dissolvable Orals

LCFAs are believed to block and shunt associated APIs away from bitter taste receptors for APIs that need flavor masking⁽¹⁾

LCFAs influence permeability in the oral cavity⁽²⁾ (i.e., sublingually and/or buccally)

Adjunct ingredients are added to enhance oral cavity permeability performance

Ingestible Solid Orals / Liquids

LCFAs influence gastric cholecystokinin production and motility⁽⁴⁾

Small intestine quickly absorbs LCFA-associated APIs into the bloodstream via the lymphatics bypassing first pass liver effect⁽⁵⁾

Adjunct ingredients added to enhance stomach or small intestine uptake depending on desired site of absorption

Enhanced brain absorption

Once absorbed systemically through dissolvable or solid oral form factors, LCFA-associated APIs are believed to enter brain preferentially through fatty acid transport proteins⁽³⁾

LCFA = Long Chain Fatty Acid

DehydraTECH - Patented Technology Potential Benefits

Patented drug delivery technology improves oral administration of Active Pharmaceutical Ingredients

Masks unwanted
taste ⁽¹⁾

Eliminates the
need for sugar-
filled edibles

Improves speed of
onset

Effects are felt in
minutes⁽²⁾

Increases
bioavailability

Much more
effective at
delivering drug into
bloodstream⁽³⁾

Increases brain
absorption

Testing suggests
up to 17x
improvement⁽⁴⁾

Reduces Drug
Administration Costs

Higher ratio of
drug delivery
expected to lower
overall drug costs

Better Patient Experience

Improved Quality of Life

(1) Based on subjective clinical testing in 29 human volunteers with CBD, THC and nicotine formulations and hundreds of thousands of commercial product servings of CBD and THC formulations by Lexaria's licensing partners.

(2) Based on subjective clinical testing in 82 human volunteers with CBD, THC and nicotine formulations and hundreds of thousands of commercial product servings of CBD and THC formulations by Lexaria's licensing partners.

(3) Based on objective clinical testing in 13 human volunteers with CBD formulations, and in vivo animal testing in 316 rodents with CBD and nicotine formulations

A close-up photograph of a male scientist in a white lab coat and safety glasses, holding a test tube with a blue-gloved hand. The test tube contains a green liquid. A female scientist is partially visible behind him, also in a lab coat. The background is a blurred laboratory setting.

DehydraTECH Pipeline and Market Investigations 02

DehydraTECH Pipeline

	Identification	Modality	Therapeutic / Commercial Use	Potential Indication(s)	Formulation	-->Animal PK -->	Status <i>in vitro</i> / Animal PD	--> Human POC --> Registered Trials
Active 2024 Programs	DehydraTECH-CBD	Small Molecule	Cardiovascular	St. 1/2 Hypertension*	_____	_____	_____	_____ →
	DehydraTECH-GLP-1/GIP	Peptide	Metabolic Disorders	Diabetes / Weight Loss Management	_____	_____	_____	_____ →
	DehydraTECH-CBD	Small Molecule	Metabolic Disorders	Diabetes / Weight Loss Management	_____	_____	_____	_____ →
Past Work / Expansion Potential	DehydraTECH-Nicotine	Small Molecule	Nicotine Replacement	N/A	_____	_____	_____	_____
	DehydraTECH-CBD	Small Molecule	Neurology	Seizure Disorders	_____	_____	_____	
	DehydraTECH-Antiviral	Small Molecule	Antiviral	HIV/Covid-19/etc.	_____	_____	_____	
	DehydraTECH-PDE5	Small Molecule	Cardiovascular	Erectile Dysfunction	_____	_____		
	DehydraTECH-Estradiol	Small Molecule	Hormone Therapy	HRT and Menopause	_____	_____		

2024 Objectives (red):
 - HYPER-H23-1 Phase Ib IND Authorization and Execution**
 - Comprehensive series of animal and human acute and chronic dosing GLP-1 PK/PD/POC studies

PK = Pharmacokinetic
 PD = Pharmacodynamic
 POC = Proof of Concept
 CBD = Cannabidiol
 CPG = Consumer Packaged Good product
 GIP = Glucose dependent insulinotropic polypeptide

GLP-1 = Glucagon-Like Peptide 1 Agonists
 PDE5 = Phosphodiesterase 5
 HIV = Human Immunodeficiency Virus
 HRT = Hormone Replacement Therapy
 *For the treatment of stage 1 or stage 2 hypertensive patients not adequately managed with existing treatments
 ** Pending Additional Funding

Commercial Opportunities

- Lexaria management and directors have extensive experience in building relationships with “**Fortune 500**” companies
- Actively developing **lead product pipeline candidates** in the areas of:
 - **GLP-1 drugs**/diabetes and weight loss
 - **Hypertension** and potentially heart disease
- Lexaria is currently engaged with other companies, exploring partnerships and opportunities with their specific APIs of interest
- **Lexaria out-licenses its technology** in exchange for **up-front fees, milestone payments** and/or **royalty payments**
- **Lexaria is generating revenues** now through the manufacture of corporate customer specified **DehydraTECH** formulations

Market Value of 2024 DehydraTECH Investigations

Pharmacokinetic studies are evaluating **DehydraTECH's ability to improve quantity** of drug delivered and **speed** with which it is delivered, **in all of these areas:**

	DehydraTECH Markets	Size		Future Size	
		US \$bn	Year	US \$bn	Year
Active Programs	Diabetes ⁽¹⁾	79.3	2023	134.1	2030
	Cardiovascular Drugs ⁽²⁾	85.8	2023	115.8	2028
	GLP-1 ⁽³⁾	18.0	2023	100.0+	2028
	Epilepsy ⁽⁴⁾	7.0	2023	9.5	2032
	Human Hormones ⁽⁵⁾	3.7	2023	7.3	2032
	PDE5 Inhibitors ⁽⁶⁾	3.4	2023	6.1	2032

DehydraTECH for Diabetes and Weight Loss 03

2022 Zucker Rat Study for Diabetes – DehydraTECH-CBD

Lexaria's DehydraTECH-CBD Zucker rat diabetes study [DIAB-A22-1](#) evidenced:

7% weight loss, reduced blood glucose levels ($19.9 \pm 7\%$ ($p < 0.05$)), reduced triglyceride levels (25%), improved cholesterol levels and increased general activity ($p < 0.05$).

Roughly 7% weight loss apparent vs. study start by treatment day 10 with CBD(30) and CBD(100)

* $p < 0.05$ vs. obese group

$p < 0.05$ vs. lean group

*CBD(30) produced significant improvement over obese control rats, $p < 0.05$

#Treated and untreated obese rats significantly different than leans $p < 0.05$

2023 Clinical Study - DehydraTECH-Semaglutide vs. Rybelsus®

Study Design

- Randomized, cross-over, single-dose, Investigator-initiated pilot study in 7 healthy volunteers (completed in 2023):
 - Rybelsus 7mg tablets vs. **DehydraTECH-Semaglutide 7 mg** compound formulated capsules (using crushed Rybelsus tablets);
- Blood sampled at 18 intervals from T=0 to T=600 min and again at T=24hr post-dose follow up (figures do not show T-24hr data);

Key Results

- Sustained **higher** blood semaglutide levels / AUC demonstrated throughout the study duration with **DehydraTECH** ($p < 0.05$);
- Blood glucose levels **lower** throughout the study with **DehydraTECH** ($p < 0.05$); most notably post prandially*;
- Enhanced central delivery attributes of **DehydraTECH** may have contributed to the pronounced GLP-1 effect profile witnessed;
- Improvements** in GI tolerability observed:
 - Zero** instances of moderate nausea/diarrhea with **DehydraTECH-Semaglutide**;
 - Moderate** nausea ($n=2$) and moderate diarrhea ($n=1$) only reported with Rybelsus treatment.

Blood semaglutide levels

Blood glucose levels

Lexaria's 2024 Diabetes & Weight Loss R&D Program Focus

- Upcoming animal/human studies of **DehydraTECH** with various GLP-1/GIP APIs:
 - Animal #1 (WEIGHT-A24-1) – Zucker rats (n=72), 12 arms
 - Pilot #2 (GLP-1-H24-2) – Human (n=9), 3 arms;
 - Pilot #3 (GLP-1-H24-3) – Human (n=8), 2 arms;
 - Phase 1 (GLP-1-H24-4) – Human Phase 1b (n=80 obese, pre-/T2D), 4 arms.
- Parameters to be tested include:
 - Pharmacokinetics
 - Body weight
 - Blood glucose (including post-dose food challenge)
 - Glucagon
 - Insulin and A1C levels
- Drugs to be examined: Semaglutide – Liraglutide – Tirzepatide - Cannabidiol
- Semaglutide will be evaluated both with, and without, SNAC presence
- Long term stability and mode of action characterization testing will also be performed

NOTE: Tirzepatide is also a glucose-dependent insulinotropic polypeptide (GIP) receptor agonist
T2D = Type 2 Diabetes
SNAC = Sodium Salcaprozate

GLP-1-H24-2 Human Pilot Study Design (Start: May 2024)

Study Design

Open label, three-arm, single dose case-crossover exploratory pilot study to assess the tolerability, PK, and glucose homeostasis.

Test side effects, blood saturation levels, blood sugar and blood insulin

Primary endpoint:

- Safety and tolerability of oral ingestible and sublingual/buccal semaglutide with **DehydraTECH** vs Rybelsus

Secondary endpoint:

- PK and PD of oral ingestible and sublingual/buccal semaglutide with **DehydraTECH** vs Rybelsus

WEIGHT-A24-1 Animal Study Design (Start: May 2024)

Grp	Treatment	N
A	DehydraTECH -CBD (HYPER-H21-4-OTC composition)	6
B	DehydraTECH -CBD (DIAB-A22-1 / IVS231-22068-OTC composition)	6
C	DehydraTECH -CBD (HYPER-H23-1-P composition)	6
D	DehydraTECH -CBD (Secondary DIAB-A22-1 / IVS231-22068-P composition)	6
E	DehydraTECH -semaglutide (re-formulated Rybelsus OTC version)	6
F	DehydraTECH -semaglutide (re-formulated Rybelsus-P version)	6
G	DehydraTECH -semaglutide (pure API-P version)	6
H	DehydraTECH -liraglutide (pure API-P version)	6
I	Combo of one DehydraTECH -semaglutide and one DehydraTECH -CBD	6
J	Combo of DehydraTECH -liraglutide and one DehydraTECH -CBD	6
K	Vehicle (water)	6
L	Commercially available Rybelsus tablet as a crushed powder	6
	Total N =	72

12-week study to investigate the effects of test formulations (**DehydraTECH**) containing CBD, semaglutide, or liraglutide on diabetes and obesity in the male Zucker diabetic fatty (ZDF) rats.

Blood saturation levels

Blood sugar levels

Blood insulin

Blood glucagon

Brain tissue

Weight loss

GLP-1-H24-3 Human Pilot Study Design (Start: June 2024)

2-arm cross over human exploratory pilot study
N = 8

Study Design

Randomized single dose (7-day), two-arm exploratory pilot study

Test side effects, blood saturation levels, blood sugar and blood insulin

Primary endpoint:

- Safety and tolerability of oral **DehydraTECH**-tirzepatide relative to subcutaneously administered tirzepatide in healthy volunteers

Secondary endpoint:

- Pharmacokinetics and efficacy of oral **DehydraTECH**-tirzepatide relative to subcutaneously administered tirzepatide in healthy volunteers

The new **DehydraTECH** tirzepatide **capsule** formulation (from Zepbound®) designed with FDA-compliant co-ingredients. Zepbound® is a dual action GLP-1 + GIP drug

GLP-1-H24-4 Ph1 Human Study Design (Start: July 2024)

Primary Endpoint

- Magnitude of decrease in HbA1c and/or 5% bodyweight reduction

Secondary Endpoint

- Fasting glucose, cholesterol levels
- Inflammation, estimated glomerular filtration rate
- Liver enzymes
- Assessment of adverse events using a visual analog scale

Study Design

12-week study to determine the efficacy and safety of **DehydraTECH**-CBD alone or in combination with different formulations of a glucagon-like peptide 1 (GLP-1) agonist in obese volunteers and/or patients with pre or Type 2 diabetes

The study will use pure semaglutide and pure tirzepatide rather than Rybelsus and Zepbound derived respectively

*DehydraTECH - CBD

250mg BID dose in this study is higher compared to the previous study completed which used 30mg/kg and 100 mg/kg and showed 7% weight loss reductions in both dosing

2024 R&D Program Timeline

* Study will continue into 2025

A photograph of two scientists, a man and a woman, in a laboratory setting. The man, wearing glasses and a lab coat, is holding a petri dish with a blue gloved hand, examining its contents. The woman, also in a lab coat and safety goggles, is looking at the same petri dish. The background is a blurred laboratory environment with various equipment and shelves. A semi-transparent blue gradient is applied to the top half of the image.

DehydraTECH for Hypertension 04

DehydraTECH-CBD PK compared to Epidiolex®

- HYPER-H21-4 evidenced superior steady-state pharmacokinetics relative to Epidiolex® in published literature comparison;
- Study assessed 3.38 mg/Kg and 4.46 mg/Kg **DehydraTECH-CBD** daily dose levels over a 5 week treatment period (2.5 weeks/dose period);
- Almost **3X higher** CBD levels shown in bloodstream at 4.46 mg/Kg dose when compared to published 5 mg/Kg Epidiolex® dose and extrapolated to 10 mg/Kg dose.⁽¹⁾

(1)Devinsky Study <https://pubmed.ncbi.nlm.nih.gov/28538134/>

DehydraTECH for Stage 1 and 2 Hypertension

- Randomized, placebo-controlled investigator-initiated study HYPER-H21-4 in 66 patients with stage 1 or 2 hypertension
- 5-week treatment duration (i.e., a 2.5-week dose period @ 3.38 mg/Kg TID followed by 2.5-week dose period @ 4.46 mg/Kg TID);
- Significant reductions shown in mean arterial (MAP), systolic (SBP) and diastolic blood pressure ($p < 0.05$);
- Other published research has shown reductions of ~4.6 mmHg for SBP and ~2.2 mmHg for DBP as clinically significant to reduce risk of MI, stroke and CHF. **DehydraTECH**-CBD exceeded these thresholds;
- Potential novel mechanism of action in reducing blood pressure and a reduction in pro-inflammatory biomarkers;
- Enhanced central delivery attributes of **DehydraTECH** may improve BP regulation;
- Study also suggested potential additive BP reduction benefits with standard of care medications; and
- Zero serious adverse events were recorded.

DehydraTECH FDA Phase 1b IND Program

IND Opening Study – Stage 1/2 Hypertension

- Successful pre-IND meeting with the FDA in 2022 with 505(b)(2) NDA regulatory pathway confirmed;
- Received FDA clearance for IND opening study HYPER-H23-1:
 - Phase 1b randomized, double-blind, placebo-controlled study of the safety, pharmacokinetics, and pharmacodynamics of **DehydraTECH**-CBD for the treatment of stage 1 or 2 hypertension;
- Only a handful of other published studies have investigated resting blood pressure impacts of CBD; none have reported sustained reductions except **DehydraTECH**-CBD;
- FDA has issued clear guidelines defining the need for new antihypertensives that offer novel modes of action;
- Treatment of Stage 1 or 2 hypertensive patients not adequately managed with existing treatments.

Possible Future Studies

- Lexaria envisions potential additional new human clinical studies of **DehydraTECH**-CBD under IND based on its animal study successes:
 - Study EPIL-A21-1 demonstrated suppressed seizure activity at lower doses and more rapidly than Epidiolex®
 - Study DIAB-A22-1 evidenced suppressed body weight, improved triglyceride/cholesterol levels and reduced blood glucose levels

A close-up photograph of a male scientist in a white lab coat and safety glasses, holding a test tube with a blue-gloved hand. The test tube contains a green liquid. He is looking intently at the liquid. In the background, another person is partially visible, also in a lab coat. The image has a blue and purple gradient overlay on the left side.

Management, Directors and Advisors 05

Executives, Directors, and Advisors With Drug Delivery Technology and Capital Markets Expertise

Chris Bunka Chairman & CEO

- Serial entrepreneur involved in several private and public companies since the late 1980's
- Extensive experience in the capital markets, corporate governance, M&A and finance
- Named inventor on multiple patent innovations

Julian Gangolli Strategic Advisor

- Former President of GW Pharmaceuticals USA and Allergan N.A
- Extensive US and International executive level experience in Large Pharma, Specialty Pharmaceutical, and Start-Up Biotechnology environments
- Board of Directors member of three NASDAQ traded pharmaceutical companies; Revance Therapeutics, Krystal Biotech and Outlook Therapeutics

John Docherty, M.Sc. President

- Specialist in development of drug delivery technologies
- Former President and COO of Helix BioPharma Corp. (TSX: HBP)
- Named inventor on multiple issued and pending patents
- Pharmacologist and toxicologist

Dr. Philip Ainslie Scientific & Medical Advisor

- Co-Director for the Centre for Heart, Lung and Vascular Health, Canada
- Research Chair in Cerebrovascular Physiology and Professor, School of Health and Exercise Sciences, Faculty of Health and Social Development at the University of British Columbia

A close-up photograph of a male scientist in a white lab coat and safety glasses, holding a test tube with a blue-gloved hand. The test tube contains a green liquid. A female scientist is partially visible behind him, also in a lab coat. The background is a blurred laboratory setting.

Investment Highlights 07

Lexaria Overview

Multiple Mainstream Applications of DehydraTECH in Large Markets

- **DehydraTECH** is a **versatile drug delivery platform**
- **DehydraTECH** offers **faster and more effective drug absorption** into bloodstream and brain tissues
- **DehydraTECH** pipeline **addressing serious unmet patient needs** with substantial market potential
- **Large addressable market opportunities** in GLP-1 drugs, hypertension and other APIs

2024 Catalysts

GLP-1 (Diabetes/Weight Loss):

- Human Pilot Study #2: GLP-1-H24-2
- Animal Study: WEIGHT-A24-1
- Human Pilot Study #3: GLP-1-H24-3
- Phase I Human Study: GLP-1-H24-4
- Long Term Stability & Mode of Action Testing

Hypertension:

- FDA Investigational New Drug opening study HYPER-H23-1

Commercialization Through Licensing and Partnerships

- **Extensive experience with drug delivery technology; capital markets; “Fortune 500” relationships**
- Currently engaged with other companies, exploring **partnerships and opportunities** with their specific APIs of interest
- **License agreements in place**
- **43 patents granted** and many more patent applications pending around the world

Appendix I: DehydraTECH for Diabetes - Animal Study DIAB-A22-1

DehydraTECH for Diabetes - Animal Study DIAB-A22-1

On March 2, 2023 and June 16, 2023 Lexaria announced that in pre-clinical diabetes study DIAB-A22-1 in obese diabetic-conditioned animals, **DehydraTECH**-CBD achieved each of the following:

- **Lowered** blood glucose levels by **19.9%** ($p < 0.05$)
- **Lowered** overall body weight by **7%** sustained over 8 weeks
- Witnessed a statistically significant **increase** in locomotor activity ($p < 0.05$)
- **Lowered** triglyceride levels by more than **25%** ($p < 0.007$)
- **Lowered** blood urea nitrogen levels by **27.9%** ($p < 0.001$)

Animal Study DIAB-A22-1 Results

Lowered blood glucose levels: Using the Antech hexokinase blood chemistry test panel methodology, Lexaria discovered that blood glucose levels were statistically significantly lowered by $19.9 \pm 7\%$ in the obese diabetic-conditioned animals treated with the **DehydraTECH**-CBD 30 mg/Kg dose (yellow bar below) (* $p < 0.05$) compared to the obese vehicle control animals.

Animal Study DIAB-A22-1 Results

Lowered overall body weight: Beginning just four days after the start of dosing with **DehydraTECH**-CBD, the obese rats began to lose weight. The weight loss was maximized nine days after dosing and maintained throughout the 8-week study duration. This apparent trend demonstrated roughly a 7% loss of body weight throughout the course of treatment at both **DehydraTECH**-CBD doses studied (30 mg/Kg and 100 mg/Kg). Only the **DehydraTECH**-CBD-dosed animals weighed less at the end of the study than at the beginning, whereas the weight of the untreated obese animals trended upwards throughout the study.

Animal Study DIAB-A22-1 Results

Increase in locomotor activity: Activity levels, which were measured in this study via locomotor activity, the distance the animals travelled in open field observations. Interestingly, the lower dose of **DehydraTECH**-CBD resulted in a statistically significant improvement in locomotor activity compared to the untreated obese control rats (* $p < 0.05$), whereas there was no significant difference accordingly evidenced at the higher dose.

Animal Study DIAB-A22-1 Results

Lowered triglyceride levels: The animals dosed with **DehydraTECH**-CBD showed statistically significant reductions in triglyceride levels from day 35 onwards compared to the obese animals not dosed with **DehydraTECH**-CBD.

Animal Study DIAB-A22-1 Results

Lowered blood urea nitrogen levels: Kidney function was also evaluated compared to the vehicle control animals by examination of the levels of blood urea nitrogen ("BUN"), creatinine, and assessment of the BUN/creatinine ratio. BUN levels were reduced by 27.9% +/- 5% (***) $p < 0.001$ in the obese animals receiving **DehydraTECH**-CBD. Creatinine levels were also improved with a 16.8% +/- 7% increase in the obese animals receiving **DehydraTECH**-CBD, although this improvement was not statistically significant. The calculated BUN/creatinine ratio in the obese animals being treated with **DehydraTECH**-CBD returned to a healthy range nearly equal to that of the lean animals, with a 55.1% +/- 16% reduction (* $p < 0.05$)

DehydraTECH Oral CBD Human Clinical Study

- [2018](#) European human clinical study (n=12)
- Double-blind, 90 mg CBD dose of **DehydraTECH** (“TurboCBD”)
- **Higher CBD delivery** throughout entire study
- **Higher cerebral perfusion** shown vs. baseline ($p < 0.001$)
- **Lower blood pressure (“BP”)** shown vs. baseline ($p < 0.05$)

Lexaria's Advanced Hypertension Program Results

Lexaria's Advanced Hypertension Program Delivers Results with No Serious Adverse Effects:

- 2018 - 12 person PK HCS evidenced 317% more CBD delivered to blood at 30-minutes
- 2021 - HYPER-H21-1: 24 person HCS evidenced rapid and sustained drop in blood pressure
- 2021 - HYPER-H21-2: 16 person HCS evidenced up to a 23% average reduction in overnight blood pressure and reduced arterial stiffness
- 2021 - HYPER-H21-3: 16 person HCS reduced attenuated pulmonary artery systolic pressure ("PASP") by ~5 mmHg or 41% overall in male participants
- 2022 - HYPER-H21-4: 66 person HCS evidenced:
 - Exceptional safety and tolerability, statistically significant lowering of 24-hour ambulatory blood pressure ("BP"), BP lowered for the entire 5-week study duration and BP lowered both for patients currently taking other antihypertensive drugs as well as patients not taking any other antihypertensive drugs

DehydraTECH-CBD Hypertension Program

Lexaria Issues Successful Results from First 2021 Study, HYPER-A21-1 - (May 6, 2021)

- Up to **2,178%** more CBD delivered into bloodstream
- Up to **1,737%** more CBD delivered into brain tissue

Lexaria's Newest DehydraTECH 2.0 Formulation Tested in Study HYPER-A21-2 Demonstrates Its Strongest CBD Absorption Results Ever - (May 20, 2021)

- New formulation delivers up to **2,708%** more CBD into bloodstream

Lexaria's DehydraTECH-CBD Lowers Blood Pressure - (July 29, 2021)

- Human Clinical Study HYPER-H21-1 evidences a rapid and sustained drop in blood pressure with DehydraTECH-CBD and excellent tolerability

Lexaria's Human Clinical Study Delivers Effective and Safe Blood Pressure Reduction Results over 24-hour Ambulatory Period - (September 7, 2021)

- Human Clinical Study HYPER-H21-2 evidences up to a remarkable **23%** decrease in blood pressure with patented DehydraTECH-CBD relative to placebo

Other Examples of AUC Improvements from Non-Registration Enabling Studies

- **Antiviral Therapies** – DehydraTECH-enabled remdesivir and ebastine delivered 82% and 204% more drug into the bloodstream and a 167% improvement in drug delivery was demonstrated utilizing DehydraTECH-enabled colchicine in rats.
- **PDE5 Inhibitors** – DehydraTECH-processed sildenafil in rats demonstrated a 37% drug delivery improvement.
- **Human Hormones** – DehydraTECH-estradiol achieved total drug delivery levels that were 1,500% greater than the control for estradiol in rats and over 12,500% greater for estrone.
- **Reduced Risk Oral Nicotine** – DehydraTECH-processed nicotine benzoate delivered 169% more nicotine into the bloodstream in rats. Also shown to reach Tmax in investigator-initiated human clinical study ~15-20% faster than commercially approved products on!® and Zyn® (p<0.05) with trend toward higher levels of certain pleasurable effects achieved sooner in study participants.

DehydraTECH Demonstrates Higher Brain Perfusion with Nicotine

- Lexaria's **DehydraTECH** technology delivered 195% more nicotine orally into exsanguinated brain tissue in [rodent study](#);
- Lexaria's formulation was 4x faster at reaching its peak level in brain tissue than the concentration-matched control formulation; and

	Lexaria Formulation	Control Formulation
Cmax (ng/g)	1,260 ± 200	427 ± 66.5
Tmax (hr)	1.0	4.0
T1/2 (hr)	21.6	ND
MRTlast (hr)	9.24	7.03
AUClast (hr.ng/g)	12,999 ± 1252	5,881 ± 538

- Similar findings have also been documented with other **DehydraTECH**-processed APIs such as [THC](#) and [CBD](#).

DehydraTECH Molecular Characterization Studies

- DLS and Zeta Potential screening shows formation of unique, negatively charged nanoparticles with **DehydraTECH-nicotine** formulation compared to constituent subparts

Gum Arabic

Nicotine Polacrilex

LCFA Oil + Nicotine Polacrilex

DehydraTECH-Nicotine (“Test Article”)

Product	Size (nm)	Zeta Potential (mV)
Gum Arabic	42	-19
Nicotine Polacrilex	328	-15
LCFA Oil/Nicotine mixture	163	-30
Test Article	117	-30

NMR Testing – No Covalently Bond NME with DehydraTECH-Nicotine

NMR = nuclear magnetic resonance testing.
NME = New molecular entity
