Notes to Condensed Consolidated Financial Statements (Unaudited)

1. Description of Business and Basis of Financial Statements

Description of Business

Immunic, Inc. ("Immunic" or the "Company") is a clinical-stage biopharmaceutical company with a pipeline of selective oral immunology therapies focused on treating chronic inflammatory and autoimmune diseases, including relapsing-remitting multiple sclerosis ("RRMS"), ulcerative colitis ("UC"), Crohn's disease ("CD") and psoriasis. The Company's main operations are in Gräfelfing near Munich, Germany. Immunic currently has approximately 45 employees.

Immunic is currently pursuing three development programs. These include the IMU-838 program, which is focused on the development of oral formulations of a small molecule inhibitor of the enzyme dihydroorotate dehydrogenase ("DHODH"); the IMU-935 program, which is focused on an inverse agonist of RORyt, an immune cell-specific isoform of retinoic acid receptor-related orphan nuclear receptor gamma ("RORy"); and the IMU-856 program, which involves the development of a drug targeting the restoration of intestinal barrier function. In addition to these large markets, these products are also being developed to address certain rare diseases with high unmet medical needs, such as primary sclerosing cholangitis ("PSC") and Guillain-Barré syndrome ("GBS"), as well as metastatic castration-resistant prostate cancer ("mCRPC").

The Company's business, operating results, financial condition and growth prospects are subject to significant risks and uncertainties, including the failure of its clinical trials to meet their endpoints, failure to obtain regulatory approval and needing additional funding to complete the development and commercialization of the Company's three development programs.

Liquidity and Financial Condition

Immunic has no products approved for commercial sale and has not generated any revenue from product sales. It has never been profitable and has incurred operating losses in each year since inception in 2016. The Company has an accumulated deficit of approximately \$156.4 million at June 30, 2021 and \$103.9 million as of December 31, 2020. Substantially all of Immunic's operating losses resulted from expenses incurred in connection with its research and development programs and from general and administrative costs associated with its operations.

Immunic expects to incur significant expenses and increasing operating losses for the foreseeable future as it initiates and continues the preclinical and clinical development of its product candidates and adds personnel necessary to advance its clinical pipeline of product candidates. Immunic expects that its operating losses will fluctuate significantly from quarter-to-quarter and year-to-year due to timing of clinical development programs.

From inception through July 31, 2021, Immunic has raised net cash of approximately \$258.8 million from private and public offerings of preferred and common stock. As of June 30, 2021, Immunic had cash and cash equivalents of approximately \$87.2 million which does not include the approximately \$42.2 million raised in the equity offering which closed on July 19, 2021. With these funds, Immunic expects to be able to fund its operations beyond twelve months from the date of the issuance of the accompanying condensed consolidated financial statements.

Basis of Presentation and Consolidation

The accompanying condensed consolidated financial statements have been prepared in conformity with United States generally accepted accounting principles, ("U.S. GAAP") and include the accounts of Immunic and its wholly-owned subsidiaries, Immunic AG and Immunic Research GmbH (which both began operations in 2016) and Immunic Australia Pty Ltd. (which began operations in 2018). All intercompany accounts and transactions have been eliminated in consolidation. Immunic manages its operations as a single reportable segment for the purposes of assessing performance and making operating decisions. Certain prior period amounts have been reclassified to conform to the current basis of presentation.

Unaudited Interim Financial Information

Immunic has prepared the accompanying interim unaudited condensed consolidated financial statements in accordance with United States generally accepted accounting principles, ("US GAAP"), for interim financial information and with the instructions to Form 10-Q and Regulation S-X of the SEC. Accordingly, they do not include all of the information and

footnotes required by U.S. GAAP for complete financial statements. These interim unaudited condensed consolidated financial statements reflect all adjustments consisting of normal recurring accruals which, in the opinion of management, are necessary to present fairly Immunic's consolidated financial position, consolidated results of operations, consolidated statement of stockholders' equity and consolidated cash flows for the periods and as of the dates presented. The Company's fiscal year ends on December 31. The condensed consolidated balance sheet as of December 31, 2020 was derived from audited consolidated financial statements but does not include all disclosures required by U.S. GAAP. These condensed consolidated financial statements should be read in conjunction with the annual consolidated financial statements and the notes thereto included on the Company's Annual Report on Form 10-K filed on February 26, 2021. The nature of Immunic's business is such that the results of any interim period may not be indicative of the results to be expected for the entire year.

2. Summary of Significant Accounting Policies

Use of Estimates

The preparation of financial statements in conformity with U.S. GAAP requires the Company to make certain estimates and assumptions that affect the reported amounts of assets, liabilities, expenses and the disclosure of contingent assets and liabilities in the Company's consolidated financial statements. The most significant estimates in the Company's financial statements and accompanying notes relate to clinical trial expenses and share-based compensation. Management believes its estimates to be reasonable under the circumstances. Actual results could differ materially from those estimates and assumptions.

Foreign Currency Translation and Presentation

The Company's reporting currency is United States ("U.S.") dollars. Immunic AG and Immunic Research GmbH's operations are located in Germany with the euro being their functional currency. Immunic Australia Pty Ltd.'s functional currency is the Australian dollar. All amounts in the financial statements where the functional currency is not the U.S. dollar are translated into U.S. dollar equivalents at exchange rates as follows:

- · assets and liabilities at reporting period-end rates;
- income statement accounts at average exchange rates for the reporting period; and
- components of equity at historical rates.

Gains and losses from translation of the financial statements into U.S. dollars are recorded in stockholders' equity as a component of accumulated other comprehensive income (loss). Realized and unrealized gains and losses resulting from foreign currency transactions denominated in currencies other than the functional currency are reflected as general and administrative expenses in the Consolidated Statements of Operations. Foreign currency transaction gains and losses related to long-term intercompany loans that are payable in the foreseeable future are recorded in Other Income (Expense). The Consolidated Statements of Cash Flows were prepared by using the average exchange rate in effect during the reporting period which reasonably approximates the timing of the cash flows.

Cash and Cash Equivalents

The Company considers all highly liquid investments with an original maturity of three months or less to be cash equivalents.

Cash and cash equivalents consist of cash on hand and deposits in banks located in the U.S., Germany and Australia. The Company maintains cash and cash equivalent balances denominated in Euro and U.S. dollars with major financial institutions in the U.S. and Germany in excess of the deposit limits insured by the government. Management periodically reviews the credit standing of these financial institutions and believes that the Company is not exposed to any significant credit risk. The Company currently deposits its cash and cash equivalents with two large financial institutions

Fair Value Measurement

Fair value is defined as the price that would be received to sell an asset or be paid to transfer a liability in an orderly transaction between market participants on the measurement date. Accounting guidance establishes a fair value hierarchy that requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. The standard describes three levels of inputs that may be used to measure fair value:

- Level 1—Quoted prices in active markets for identical assets or liabilities. Level 1 assets consisted of money market funds for the periods presented. The Company had no Level 1 liabilities for the periods presented.
- Level 2— Inputs other than observable quoted prices for the asset or liability, either directly or indirectly; these include quoted prices for similar assets or liabilities in active markets and quoted prices for identical or similar assets or liabilities in markets that are not active. The Company had no Level 2 assets or liabilities for the periods presented.
- Level 3—Unobservable inputs to the valuation methodology that are significant to the measurement of the fair value of assets or liabilities. The Company had no Level 3 assets or liabilities for the periods presented.

The carrying value of cash and cash equivalents, other current assets and prepaid expenses, accounts payable, accrued expenses, and other current liabilities approximates fair value due to the short period of time to maturity

Property and Equipment

Property and equipment is stated at cost. Depreciation is computed using the straight-line method based on the estimated service lives of the assets, which range from three to thirteen years. Depreciation expense was \$15,000 and \$6,000 for the three months ended June 30, 2021 and 2020, respectively. Depreciation expense was \$29,000 and \$20,000 for the six months ended June 30, 2021 and 2020, respectively

Impairment of Long-Lived Assets

The Company records impairment losses on long-lived assets used in operations when indicators of impairment are present and the undiscounted cash flows estimated to be generated by those assets are less than the assets' carrying amount. Impaired assets are then recorded at their estimated fair value. There were no impairment losses during the three and six months ended June 30, 2021 and 2020.

Goodwill

Business combinations are accounted for under the acquisition method. The total purchase price of an acquisition is allocated to the underlying identifiable net assets, based on their respective estimated fair values as of the acquisition date. Determining the fair value of assets acquired and liabilities assumed requires management's judgment and often involves the use of significant estimates and assumptions, including assumptions with respect to future cash inflows and outflows, probabilities of success, discount rates, and asset lives, among other items. Assets acquired and liabilities assumed are recorded at their estimated fair values. The excess of the purchase price over the estimated fair values of the net assets acquired is recorded as goodwill.

Goodwill is tested for impairment at the reporting unit level annually in the fourth quarter, or more frequently when events or changes in circumstances indicate that the asset might be impaired. Examples of such events or circumstances include, but are not limited to, a significant adverse change in legal or business climate, an adverse regulatory action or unanticipated competition.

The Company assesses qualitative factors to determine whether the existence of events or circumstances would indicate that it is more likely than not that the fair value of the reporting unit is less than its carrying amount. If after assessing the totality of events or circumstances, the Company were to determine that it is more likely than not that the fair value of the reporting unit is less than its carrying amount, then the Company would perform a quantitative test that compares the fair value to its carrying value to determine the amount of any impairment. Impairment testing for goodwill is done at the reporting unit level. The Company has determined that it operates in a single operating segment and has a single reporting unit. The Company has determined there was no goodwill impairment as of June 30, 2021.

Research and Development Expenses

These costs primarily include external development expenses and internal personnel expenses for the three development programs, IMU-838, IMU-935 and IMU-856. Immunic has spent the majority of its research and development resources on IMU-838, the Company's lead development program for clinical trials in RRMS, UC, COVID-19, and PSC.

Research and development expenses consist of expenses incurred in research and development activities, which include clinical trials, contract research services, certain milestone payments, salaries and related employee benefits, allocated facility costs and other outsourced services. Research and development expenses are charged to operations as incurred.

The Company enters into agreements with contract research organizations ("CROs") to provide clinical trial services for individual studies and projects by executing individual work orders governed by a Master Service Arrangement ("MSA"). The MSAs and associated work orders provide for regular recurrent payments and payments upon the completion of certain milestones. The Company regularly assesses the timing of payments against actual costs incurred to ensure a proper accrual of related expenses in the appropriate accounting period.

Collaboration Arrangements

Certain collaboration and license agreements may include payments to or from the Company of one or more of the following: non-refundable or partially refundable upfront or license fees; development, regulatory and commercial milestone payments; payment for manufacturing supply services; partial or complete reimbursement of research and development costs; and royalties on net sales of licensed products. The Company assesses whether such contracts are within the scope of Financial Accounting Standards Board (FASB) Accounting Standards Update ("ASU") 2014-09 "Revenue from Contracts with Customers" and ASU No. 2018-18, "Collaborative Arrangements", ("ASU 2018-18"). ASU 2018-18, clarifies that certain elements of collaborative arrangements could qualify as transactions with customers in the scope of ASC 606.

In October 2018, the Company entered into an option and license agreement (the "Daiichi Sankyo Agreement") with Daiichi Sankyo Co., Ltd. ("Daiichi Sankyo") which granted the Company the right to license a group of compounds, designated by the Company as IMU-856, as a potential new oral treatment option for diseases such as inflammatory bowel disease, irritable bowel syndrome with diarrhea, immune checkpoint inhibitor induced colitis and other barrier function associated diseases. During the option period, the Company performed agreed upon research and development activities for which it was reimbursed by Daiichi Sankyo up to a maximum agreed-upon limit. Such reimbursement was recorded as other income. There are no more research and development reimbursements expected under this agreement.

General and Administrative Expenses

General and administrative expenses consist primarily of salaries and related costs for personnel in executive, finance, business development and other support functions. Other general and administrative expenses include, but are not limited to, stock-based compensation, insurance costs, professional fees for legal, accounting and tax services, consulting, related facility costs and travel.

Stock-Based Compensation

The Company measures the cost of employee and non-employee services received in exchange for equity awards based on the grant-date fair value of the award recognized generally as an expense (i) on a straight-line basis over the requisite service period for those awards whose vesting is based upon a service condition, and (ii) on an accelerated method for awards whose vesting is based upon a performance condition, but only to the extent it is probable that the performance condition will be met. Stock-based compensation is (i) estimated at the date of grant based on the award's fair value for equity classified awards and (ii) final measurement date for liability classified awards. Forfeitures are recorded in the period in which they occur.

The Company estimates the fair value of stock options using the Black-Scholes-Merton option-pricing model ("BSM"), which requires the use of estimates and subjective assumptions, including the risk-free interest rate, the fair value of the underlying common stock, the expected dividend yield of the Company's common stock, the expected volatility of the price of the Company's common stock, and the expected term of the option. These estimates involve inherent uncertainties and the application of management's judgment. If factors change and different assumptions are used, the Company's stockbased compensation expense could be materially different in the future.

Leases

The Company leases office space and office equipment. The underlying lease agreements have lease terms of less than 12 months and up to 60 months. Leases with terms of 12 months or less at inception are not included in the operating lease right of use asset and operating lease liability.

The Company has two existing leases for office space. At inception of a lease agreement, the Company determines whether an agreement represents a lease and at commencement each lease agreement is assessed as to classification as an operating or financing lease. The Company's two leases have been classified as operating leases and an operating lease right-of-use asset and an operating lease liability have been recorded on the Company's balance sheet. A right-of-use lease asset represents the Company's right to use the underlying asset for the lease term and the lease obligation represents its commitment to make the lease payments arising from the lease. Right-of-use lease assets and obligations are recognized at the commencement date based on the present value of remaining lease payments over the lease term. As the Company's leases do not provide an implicit rate, the Company has used an estimated incremental borrowing rate based on the information available at the commencement date in determining the present value of lease payments. The right-of-use lease asset includes any lease payments made prior to commencement and excludes any lease incentives. The lease term used in estimating future lease payments may include options to extend when it is reasonably certain that the Company will exercise that option. Operating lease expense is recognized on a straight-line basis over the lease term, subject to any changes in the lease or changes in expectations regarding the lease term. Variable lease costs such as common area costs and property taxes are expensed as incurred. Leases with an initial term of twelve months or less are not recorded on the balance sheet.

Comprehensive Income (Loss)

Comprehensive income (loss) is defined as the change in equity during a period from transactions and other events and circumstances from non-owner sources. Accumulated other comprehensive income (loss) has been reflected as a separate component of stockholders' equity in the accompanying Consolidated Balance Sheets and consists of foreign currency translation adjustments (net of tax).

Income Taxes

The Company is subject to corporate income tax laws and regulations in the U.S., Germany and Australia. Tax regulations within each jurisdiction are subject to the interpretation of the related tax laws and regulations and require significant judgment in their application.

The Company utilizes the asset and liability method of accounting for income taxes which requires the recognition of deferred tax assets and liabilities for the expected future tax consequences of events that have been included in the consolidated financial statements. Deferred income tax assets and liabilities are determined based on the differences between the financial statement and tax basis of assets and liabilities using enacted tax rates in effect for the year in which the differences are expected to reverse. The effect of changes in tax rates on deferred tax assets and liabilities is recognized in operations in the period that includes the enactment date. Deferred taxes are reduced by a valuation allowance when, in the opinion of management, it is more likely than not some portion or the entire deferred tax asset will not be realized. As of June 30, 2021 and 2020, respectively, the Company maintained a full valuation allowance against the balance of deferred tax assets.

It is the Company's policy to provide for uncertain tax positions and the related interest and penalties based upon management's assessment of whether a tax benefit is more likely than not to be sustained upon examination by tax authorities. The Company recognizes interest and penalties accrued on any unrecognized tax benefits as a component of income tax expense. The Company is subject to U.S. federal, New York, California, Texas, German and Australian income taxes. The Company is subject to U.S. federal or state income tax examination by tax authorities for tax returns filed for the years 2003 and forward due to the carryforward of NOLs. Tax years 2016 through 2019 are subject to audit by German and Australian tax authorities. The Company is not currently under examination by any tax jurisdictions.

Net Loss Per Share

Basic net loss per share attributable to common stockholders is calculated by dividing the net loss by the weighted-average number of common shares outstanding for the period, without consideration for common stock equivalents. Diluted net loss per share attributable to common stockholders is computed by dividing the net loss by the weighted-average number of common shares and, if dilutive, common stock equivalents outstanding for the period determined using the treasury-stock method. For all periods presented, there is no difference in the number of shares used to calculate basic and diluted shares outstanding due to the Company's net loss position.

Potentially dilutive securities, not included in the calculation of diluted net loss per share attributable to common stockholders because to do so would be anti-dilutive, are as follows:

		As of June 30,
	2021	2020
mmon stock	2,064,839	9 434,248

Recently Issued and/or Adopted Accounting Standards

There are no recently issued accounting standards that would have a significant impact on the company's consolidated financial statements.

VAT receivable in Other Current Assets and Prepaid Expenses and Other Current Liabilities includes \$3.6 million of value added tax receivable and payable related to the 4SC transaction.

4. Commitments and Contingencies

Operating Leases

The Company leases certain office space under non-cancelable operating leases. The leases terminate on April 30, 2023 for the New York City office and June 30, 2025 for the Gräfelfing, Germany office. The Company formerly leased office space in Planegg-Martinsried, Germany pursuant to a modified lease that terminated on August 31, 2020. These leases include both lease (e.g., fixed rent) and non-lease components (e.g., common-area and other maintenance costs). The non-lease components are deemed to be executory costs and are therefore excluded from the minimum lease payments used to determine the present value of the operating lease obligation and related right-of-use asset. The New York City lease has renewal options, but they were not included in calculating the right of use asset and liabilities. On April 7, 2020, the Company signed a five year lease for its facility in Gräfelfing, Germany. On March 1, 2021 the Company added additional lease space at the Gräfelfing, Germany office. Renewal options were not included in calculating the right of use asset and liabilities for this facility. The leases do not have concessions, leasehold improvement incentives or other build-out clauses. Further, the leases do not contain contingent rent provisions. The New York City lease had a six month rent holiday at the beginning of the lease. There were net additions to right of use assets of \$427,000 as a result of signing the Gräfelfing, Germany lease and shortening the term of the Planegg-Martinsried, Germany lease during the year ended December 31, 2020 and net additions of \$435,000 with the signing of additional lease space in March 2021.

The leases do not provide an implicit rate and, due to the lack of a commercially salable product, the Company is generally considered unable to obtain commercial credit. Therefore, the Company estimated its incremental interest rate to be 6%, considering the quoted rates for the lowest investment-grade debt and the interest rates implicit in recent financing leases. Immunic used its estimated incremental borrowing rate and other information available at the lease commencement date in determining the present value of the lease payments.

Immunic's operating lease costs and variable lease costs were \$145,000 and 80,000 for the three months ended June 30, 2021 and 2020, respectively and \$239,000 and \$159,000 for the six months ended June 30, 2021 and 2020, respectively. Variable lease costs consist primarily of common area maintenance costs, insurance and taxes which are paid based upon actual costs incurred by the lessor.

Maturities of the operating lease obligation are as follows as of June 30, 2021 (in thousands):

2021	229
2022	459
2023	309
2024	235
2025	117
Total	1,349
Interest	130
PV of obligation	1,219

Contractual Obligations

As of June 30, 2021, the Company has non-cancelable contractual obligations under certain agreements related to its development programs IMU-838, IMU-935 and IMU-856 totaling approximately \$0.6 million, all of which is expected to be paid in 2021.

Other Commitments and Obligations

In May 2016, the Company entered into a purchase agreement (the "Agreement") with 4SC AG, whereby the Company acquired certain assets, including the rights to patents and patent applications, trademarks and know-how. This transaction has been accounted for as an asset acquisition under Accounting Standards Update 2017-01 - Business Combinations (Topic 805): Clarifying the Definition of a Business. The Agreement included payments (Tranches III and IV) that were contingent upon the occurrence of certain events and required the Company to pay royalties equal to 4.4% of the aggregated net sales for a certain period as defined in the Agreement (Tranche III) upon commercialization of the acquired assets. Effective April 12, 2019, the parties agreed to settle Tranche IV by issuing 120,070 shares of the Company's common stock, immediately following the Transaction, to 4SC AG while keeping Tranche III in effect. Approximately \$1.5 million of expense was recorded as a result of the issuance of these shares on April 12, 2019.

On March 31, 2021, Immunic AG, a wholly-owned subsidiary of the Company, and 4SC AG entered into a Settlement Agreement, pursuant to which Immunic AG settled its remaining obligation of the 4.4% royalty on net sales for \$17.25 million (Tranche III of the Agreement). The payment was made 50% in cash and 50% in shares of Immunic's common stock (the "Shares"). Pursuant to the Agreement, the Company filed a resale shelf registration statement on Form S-3 covering the resale of the Shares. With the execution of the Agreement, no further payment obligations remain between Immunic AG and 4SC AG.

Legal Proceedings

The Company is not currently a party to any litigation, nor is it aware of any pending or threatened litigation, that it believes would materially affect its business, operating results, financial condition or cash flows. However, its industry is characterized by frequent claims and litigation including securities litigation, claims regarding patent and other intellectual property rights and claims for product liability. As a result, in the future, the Company may be involved in various legal proceedings from time to time.

5. Fair Value

The following fair value hierarchy tables present information about each major category of the Company's financial assets and liabilities measured at fair value on a recurring basis (in thousands):

		Fair Value Measurement at June 30, 2021								
		Fair Value Level 1		Level 2		Level 3				
Assets										
Money market funds		\$	45,622	\$	45,622	\$	_	\$	_	
Total assets at fair value		\$	45,622	\$	45,622	\$		\$	_	

		Fair Value Measurement at Fair Value Measurement at December 31, 2020							
		Fair Value	L	Level 1 Leve		Level 2	2 Level		
Assets	_		- '						
Money market funds	\$	39,615	\$	39,615	\$	_	\$	_	
Total assets	\$	39,615	\$	39,615	\$		\$	_	

There were no transfers between Level 1, Level 2 or Level 3 assets during the periods presented.

For the Company's money market funds, which are included as a component of cash and cash equivalents on the consolidated balance sheet, realized gains and losses are included in interest income (expense) on the consolidated statements of operations.

The carrying amounts of other current assets and prepaid expenses, accounts payable, accrued expenses, and other current liabilities approximate their fair values due to their short-term nature. The fair value and book value of the money market funds presented in the table above are the same.

6. Common Stock

Shelf Registration Statement

In May 2018, Vital filed a shelf registration statement on Form S-3 (the "2018 Shelf Registration Statement"), which became effective in June 2018. The 2018 Shelf Registration Statement permitted the offering, issuance and sale of up to \$200.0 million of common stock, preferred stock, warrants, debt securities, and/or units in one or more offerings and in any combination. This registration statement expired in June 2021 and is no longer effective.

In November 2020, Immunic filed a shelf registration statement on Form S-3. The 2020 Shelf Registration Statement permits the offering, issuance and sale of up to \$250.0 million of common stock, preferred stock, warrants, debt securities, and/or units in one or more offerings and in any combination of the foregoing.

In July 2019, the Company filed a Prospectus Supplement for the offering, issuance and sale of up to a maximum aggregate offering price of \$40.0 million of common stock that may be issued and sold under an at-the-market sales agreement ("July 2019 ATM") with SVB Leerink LLC ("SVB Leerink") as agent. The Company used the net proceeds from the offering to continue to fund the ongoing clinical development of its product candidates and for other general corporate purposes, including funding existing and potential new clinical programs and product candidates. The July 2019 ATM was effectively terminated in June 2021 when the 2018 Shelf Registration Statement expired.

In December 2020, the Company filed another Prospectus Supplement for the offering, issuance and sale of up to a maximum aggregate offering price of \$50.0 million of common stock that may be issued and sold under another at-the-market sales agreement ("December 2020 ATM") with SVB Leerink as agent. The Company intends to use the net proceeds from the offering to continue to fund the ongoing clinical development of its product candidates and for other general corporate purposes, including funding existing and potential new clinical programs and product candidates. The December 2020 ATM will terminate upon the earlier of (i) the issuance and sale of all of the shares through SVB Leerink on the terms and subject to the conditions set forth in the December 2020 ATM or (ii) termination of the December 2020 ATM as otherwise permitted

thereby. The December 2020 ATM may be terminated at any time by either party upon ten days' prior notice, or by SVB Leerink at any time in certain circumstances, including the occurrence of a material adverse effect on the Company. As of June 30, 2021, \$50.0 million in capacity remains under the December 2020 ATM.

The Company has agreed to pay SVB Leerink a commission equal to 3.0% of the gross proceeds from the sales of common shares pursuant to both ATM's and has agreed to provide SVB Leerink with customary indemnification and contribution rights.

The Company did not have any ATM activity during the three and six months ended June 30, 2021.

In the three months ended June 30, 2020, the Company raised gross proceeds of \$2.3 million pursuant to the July 2019 ATM through the sale of 205,083 shares of common stock at a weighted average price of \$11.31 per share. The net proceeds from such sale were \$2.2 million after deducting underwriter commissions of \$69,610 and estimated offering expenses of \$4,962.

In the six months ended June 30, 2020, the Company raised gross proceeds of \$2.9 million pursuant to the July 2019 ATM through the sale of 283,828 shares of common stock at a weighted average price of \$10.31 per share. The net proceeds from such sale were \$2.8 million after deducting underwriter commissions of \$87,766 and estimated offering expenses of \$23,996.

Registered Direct Offering

On April 23, 2020, the Company entered into an engagement letter with ROTH Capital Partners, LLC ("RCP") relating to the Company's registered direct offering of common stock to select institutional investors. Pursuant to this agreement, the Company agreed to pay RCP a cash fee of 6.5% of the gross proceeds from the offering raised from investors and to reimburse RCP for certain costs incurred in connection therewith.

In addition, on April 23, 2020, the Company and the investors entered into a securities purchase agreement relating to the issuance and sale of an aggregate of 1,764,706 shares of the Company's common stock. The purchase price per share was \$8.50 for aggregate gross proceeds to the Company of approximately \$15.0 million. This securities purchase agreement restricted the Company from issuing additional common stock for a period of 75 days from April 27, 2020, subject to certain exceptions.

The net proceeds to the Company from this offering, after deducting the Company's offering expenses, were approximately \$13.9 million.

Public Equity Offering

On June 10, 2020, the Company entered into a placement agency agreement with RCP and Ladenburg Thalmann & Co. Inc. relating to the Company's public offering of 2,175,000 shares of the Company's common stock. Pursuant to this agreement, the Company agreed to pay the placement agents a cash fee of 6.5% of the gross proceeds from the offering raised from investors and to reimburse the placement agents for certain costs incurred in connection therewith.

In addition, on June 10, 2020, the Company and certain institutional investors entered into securities purchase agreements relating to the issuance and sale of an aggregate of 2,175,000 shares of the Company's common stock. The purchase price per share in the Offering was \$11.40 for aggregate gross proceeds to the Company of approximately \$25.0 million. The securities purchase agreement restricts the Company from issuing additional common stock for a period of 60 days from June 12, 2020, subject to certain exceptions.

The net proceeds to the Company from this offering, after deducting the Company's offering expenses, were approximately \$23.0 million.

Common Stock

As of June 30, 2021, the Company's certificate of incorporation, as amended and restated, authorized the Company to issue 130,000,000 shares of common stock, par value of \$0.0001 per share. The voting, dividend and liquidation rights of the holders of the Company's common stock are subject to and qualified by the rights, powers and preferences of any holders of preferred stock.

Each share of common stock entitles the holder to one vote on all matters submitted to a vote of the Company's stockholders. Common stockholders are entitled to receive dividends, as may be declared by the board of directors, if any. Through June 30, 2021, no cash dividends had been declared or paid.

Preferred Stock

The Company's certificate of incorporation, as amended and restated, authorizes the Company to issue 20 million shares of \$0.0001 par value preferred stock, rights and preferences to be set by the Board of Directors. No preferred shares were outstanding as of June 30, 2021.

Stock Reserved for Future Issuance

Shares reserved for future issuance at June 30, 2021 are as follows:

	Number of Shares
Common stock reserved for issuance for:	
2021 Employee stock Purchase Plan	200,000
Outstanding stock options	2,064,839
Common stock options available for future grant:	
2014 Equity Incentive Plan	43,311
2017 Inducement Equity Incentive Plan	46,250
2019 Omnibus Equity Incentive Plan	775,211
Total common shares reserved for future issuance	3,129,611

7. Stock-Based Compensation Plans

2021 Employee Stock Purchase Plan

On April 25, 2021, the Company adopted the 2021 Employee Stock Purchase Plan, which was approved by stockholder vote at the 2021 Annual Meeting of Stockholders held on June 10, 2021. The plan provides eligible employees of the Company with an opportunity to purchase common stock of the Company through accumulated payroll deductions, which are included in other current liabilities until they are used to purchase Company shares. Eligible employees participating in the bi-annual offering period can choose to have up to the lesser of 15% of their annual base earnings or the IRS annual share purchase limit of \$25,000 in aggregate market value to purchase shares of the Company's common stock. The purchase price of the stock is the lesser of (i) 85% of the closing market price on the date of purchase and (ii) the closing market price at the beginning of the bi-annual offering period. The maximum number of shares reserved for delivery under the plan is 200,000 shares.

As the first enrollment period under the plan commenced on August 1, 2021, the Company did not realize any expense related to the plan in the three months ended June 30, 2021.

Stock Option Programs

In July 2019, the Company's stockholders approved the 2019 Omnibus Equity Incentive Plan (the "2019 Plan") which was adopted by the Board with an effective date of June 14, 2019. The 2019 Plan allows for the grant of equity awards to employees, consultants and non-employee directors. An initial maximum of 1,500,000 shares of the Company's common stock are available for grant under the 2019 Plan. The 2019 Plan includes an evergreen provision that allows for the annual addition of up to 4% of the Company's fully-diluted outstanding stock, with a maximum allowable increase of 4,900,000 shares over the term of the 2019 Plan. In accordance with this provision, the shares available for grant were increased in 2020 and 2021 by a total of 1,340,050 shares. The 2019 Plan is currently administered by the Board, or, at the discretion of the Board, by a committee of the Board, which determines the exercise prices, vesting schedules and other restrictions of awards under the 2019 Plan at its discretion. Options to purchase stock may not have an exercise price that is less than the fair market value of underlying shares on the date of grant, and may not have a term greater than ten years. Incentive stock options granted to employees typically vest over four years. Non-statutory options granted to employees, officers, members of the Board, advisors, and consultants of the Company typically vest over three or four years.

Shares that are expired, terminated, surrendered or canceled under the 2019 Plan without having been fully exercised will be available for future awards.

Movements during the year

The following table summarizes stock option activity for the six months ended June 30, 2021 and 2020, respectively, for the 2019 Plan:

	Options	W Aver Exer Pri	cise	Weighted- Average Remaining Contractual Term (Years)	Int	Aggregate rinsic alue
Outstanding as of January 1, 2021	1,117,160	\$	12.96

Forfeited or expired	(61,918)	\$	13.47			
Outstanding as of June 30, 2020	419,845	\$	12.19	8.75	\$	411,847
Options vested and expected to vest as of June 30, 2020	419,845	\$	12.19	8.75	\$	411,847
Options exercisable as of June 30, 2020	101,845	\$	12.61	7.35	\$	72,388

Measurement

The weighted-average assumptions used in the BSM option pricing model to determine the fair value of the employee and non-employee stock option grants relating to the 2019 Plan were as follows:

Risk-Free Interest Rate

The risk-free rate assumption is based on U.S. Treasury instruments with maturities similar to the expected term of the stock options.

Expected Dividend Yield

The Company has not issued any dividends and does not expect to issue dividends over the life of the options. As a result, the Company has estimated the dividend yield to be zero.

Expected Volatility

Due to the Company's limited operating history and a lack of company specific historical and implied volatility data, the Company estimates expected volatility based on the historical volatility of a group of comparable companies that are publicly traded. The historical volatility data was computed using the daily closing prices for the selected companies' shares during the equivalent period of the calculated expected term of the stock-based awards.

Expected Term

The expected term of options is estimated considering the vesting period at the grant date, the life of the option and the average length of time similar grants have remained outstanding in the past.

The weighted-average grant date fair value of stock options granted under the 2019 Plan during the six months ended June 30, 2021 and 2020 was \$11.36 and \$5.86, respectively. The following are the underlying assumptions used in the Black-Scholes option pricing model to determine the fair value of stock options granted to employees and to non-employees under this stock plan:

	Six Months En	ded June 30,
	2021	2020
Risk-free interest rate	0.88%	1.06%
Expected dividend yield	0%	0%
Expected volatility	92.3%	84.4%
Expected term of options (years)	5.94	5.76

Stock-Based Compensation Expense

Total stock-based compensation expense for all stock awards recognized in the accompanying unaudited condensed consolidated statements of operations is as follows:

	Three Months Ended June 30,				Six Months Ended June 30,			
	2021		2020		2021		2020	
Research and development	\$ 492,000	\$	99,000	\$	823,000	\$	196,000	
General and administrative	1,015,000		270,000		2,263,000		526,000	
Total	\$ 1,507,000	\$	369,000	\$	3,086,000	\$	722,000	

As of June 30, 2021, there was \$14.7 million in total unrecognized compensation expense relating to the 2019 Plan to be recognized over a weighted average period of 3.04 years.

Summary of Equity Incentive Plans Assumed from Vital

Upon completion of the Transaction with Vital on April 12, 2019, Vital's 2012 Stock Option Plan (the "2012 Plan"), Vital's 2014 Equity Incentive Plan (the "2014 Plan") and Vital's 2017 Inducement Equity Incentive Plan (the "Inducement Plan"), were assumed by the Company. All awards granted under these plans have either been forfeited or expired.

There remain 43,311 shares available for grant under the 2014 Plan as of June 30, 2021.

In September 2017, Vital's board of directors approved the Inducement Plan, which was amended and restated in November 2017. Under the Inducement Plan 46,250 shares of Vital's common stock were reserved to be used exclusively for non-qualified grants to individuals who were not previously employees or directors as an inducement material to a grantee's entry into employment within the meaning of Rule 5635(c)(4) of the Nasdaq Listing Rules.

No expense was recorded for the plans assumed from Vital during the three and six months ended June 30, 2021 and 2020, respectively.

8. EIB Loan

On October 19, 2020, the Company and Immunic AG, its wholly-owned subsidiary, entered into a Finance Contract (the "Loan Agreement") with the European Investment Bank ("EIB"), pursuant to which EIB agreed to provide Immunic AG with a term loan in an aggregate amount of up to €24.5 million to support the development of Immunic's lead asset, IMU-838, in moderate coronavirus disease 2019 ("COVID-19"), to be made available to be drawn in three tranches, with the second and third tranches subject to the completion of certain pre-defined milestones. The Company has the right to defer payment of

principal and interest on the first and second tranches until five years after the respective borrowing dates, at which point such tranches must be repaid in full. The third tranche is repayable in annual installments commencing one year after its respective borrowing date and must be repaid in full no later than five years after such date. Any outstanding borrowings under the Loan Agreement will accrue interest as provided in the Loan Agreement.

From January 1, 2021 until December 31, 2030, the Company and Immunic AG are also obligated to pay EIB a very low single digit percentage of their revenue, as set forth in the Loan Agreement, subject to certain conditions and limitations tied to the total amount drawn under the Loan Agreement and subject to a cap of &8.6 million if only the first tranche is drawn and subject to a cap of &90 million if the full loan amount is drawn. The Loan Agreement also includes certain prepayment penalties that may be triggered by certain prepayments prior to the maturity date. As of June 30, 2021, no funds have been drawn down under the loan agreement.

The Company will guarantee Immunic AG's obligations to EIB pursuant to a Guarantee Agreement to be executed by the Company, Immunic AG and EIB (the "Guarantee Agreement").

9. Related Party Transactions

Executive Chairman Agreement with Duane Nash

On April 15, 2020, the compensation committee of the board of directors of the Company independently reviewed and approved entering into an employment agreement with the current Chairman of the Board, Duane Nash, MD, JD, MBA (the "Executive Chairman Agreement") and pursuant to such approval, on April 17, 2020, the Company and Dr. Nash entered into the Executive Chairman Agreement. The Executive Chairman Agreement establishes an "at will" employment relationship pursuant to which Dr. Nash serves as Executive Chairman and contemplated a term that ends on October 15, 2020, which was subsequently extended to April 15, 2021. On April 15, 2021, the Company and Dr. Nash entered into an addendum (the "Agreement") to extend the term of the Executive Chairman Agreement to April 15, 2022. In connection with the Agreement, the Company made a one-time award to Dr. Nash of an option to purchase 90,000 shares of Company common stock, which will vest monthly commencing on May 15, 2021, and to increase Dr. Nash's monthly base salary to \$27,960 from \$25,417.

10. Subsequent Events

July 2021 Public Equity Offering

On July 15, 2021, the Company entered into an underwriting agreement with Piper Sandler & Co., as representative of the several underwriters listed on Schedule A thereto, in connection with the Company's public offering of 4,500,000 shares of the Company's common stock, \$0.0001 par value per share, at a public offering price of \$10.00 per share. Under the terms of the Underwriting Agreement, the Company granted the Underwriters an option, exercisable for 30 days, to purchase up to an additional 675,000 shares of Common Stock at the public offering price, less underwriting discounts and commissions.

On July 19, 2021, the Company closed the Offering. The net proceeds to the Company from the Offering was approximately \$42.2 million, after deducting underwriting discounts and commissions and estimated offering expenses payable by the Company.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of financial condition and results of operations should be read in conjunction with our unaudited interim condensed consolidated financial statements and notes thereto included in Item 1 "Financial Statements" in this Quarterly Report on Form 10-Q (the "Quarterly Report") and the audited Consolidated Financial Statements in our Annual Report on Form 10-K. filed with the Securities and Exchange Commission ("SEC"), on February 26, 2021. As used in this report, unless the context suggests otherwise, "we," "us," "our," "the Company" or "Immunic" refer to Immunic, Inc. and its subsidiaries.

Forward-Looking Statements

In addition to historical information, this Quarterly Report includes forward-looking statements within the meaning of federal securities laws. Forward-looking statements are subject to certain risks and uncertainties, many of which are beyond our control. Such statements include, but are not limited to, statements preceded by, followed by or that otherwise include the words, "believe," "may," "might," "can," "could," "will," "would," "should," "estimate," "continue," "anticipate," "intend,"

"seek," "plan," "project," "expect," "potential," "predicts," or similar expressions and the negatives of those terms.

Forward-looking statements discuss matters that are not historical facts. Our forward-looking statements involve assumptions that, if they never materialize or prove correct, could cause our results to differ materially from those expressed or implied by such forward-looking statements. In this Quarterly Report, for example, we make forward-looking statements, among others, regarding potential strategic options; financial estimates and projections; and the sufficiency of our capital resources to fund our operations.

The inclusion of any forward-looking statements in this Quarterly Report should not be regarded as a representation that any of our plans will be achieved. Our actual results may differ from those anticipated in our forward-looking statements as a result of various factors, including those noted below under the caption "Part II, Item 1A-Risk Factors," and the differences may be material. These risk factors include, but are not limited to statements relating to our three development programs and the targeted diseases; the potential for IMU-838, IMU-935 and IMU-856 to safely and effectively target diseases; the nature, strategy and focus of the Company; the development and commercial potential of any product candidates of the Company; and our ability to retain certain personnel important to our ongoing operations and to maintain effective internal control over financial reporting.

Although our forward-looking statements reflect the good faith judgment of our management, these statements are based only on facts and factors currently known by us. As a result, stockholders are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. All forward-looking statements are qualified in their entirety by this cautionary statement, and we undertake no obligation to revise or update such statements to reflect events or circumstances after the date hereof, except as required by law.

Overview

We are a clinical-stage biopharmaceutical company with a pipeline of selective oral immunology therapies focused on treating chronic inflammatory and autoimmune diseases, including relapsing-remitting multiple sclerosis ("RRMS"), ulcerative colitis ("UC"), Crohn's disease ("CD") and psoriasis. Our main operations are in Gräfelfing near Munich, Germany. We currently have approximately 45 employees.

We are currently pursuing three development programs. These include the IMU-838 program, which is focused on the development of oral formulations of a small molecule inhibitor of the enzyme dihydroorotate dehydrogenase ("DHODH"); the IMU-935 program, which is focused on an inverse agonist of RORyt, an immune cell-specific isoform of retinoic acid receptor-related orphan nuclear receptor gamma ("RORy"); and the IMU-856 program, which involves the development of a drug targeting the restoration of intestinal barrier function. In addition to these large markets, these products are also being developed to address certain rare diseases with high unmet medical needs, such as primary sclerosing cholangitis ("PSC") and Guillain-Barré syndrome ("GBS"), as well as metastatic castration-resistant prostate cancer ("mCRPC").

The following table summarizes the potential indications, clinical targets and clinical development status of our three product candidates:

Program	Indication	Target	Preclinical	Phase 1	Phase 2	Phase 3
IMU-838	Relapsing-Remitting Multiple Sclerosis	DHODH				
	Progressive Multiple Sclerosis	DHODH				
	Ulcerative Colitis	DHODH				
	Crohn's Disease	DHODH				
	Primary Sclerosing Cholangitis	DHODH				
MU-935	Psoriasis	RORγt				
	Castration-Resistant Prostate Cancer	RORγt				
	Guillain-Barré Syndrome	RORγt				
IMU-856	Gastrointestinal Diseases	Intestinal Barrier Function				
			Completed or or	igoing	In preparation or planned	

Our most advanced drug candidate, IMU-838, targets DHODH, a key enzyme in the intracellular metabolism of immune cells in the body. In the third quarter of 2020, we reported positive results from our Phase 2 EMPhASIS trial of IMU-838 in RRMS, achieving both primary and key secondary endpoints with high statistical significance. Our Phase 3 ENSURE program of IMU-838 in RRMS, comprising twin studies evaluating efficacy, safety, and tolerability of IMU-838 versus placebo, is expected to start in the second half of 2021. The supportive Phase 2 CALLIPER trial in progressive multiple sclerosis ("PMS") is expected to start in the third quarter of 2021. In the first quarter of 2021, we announced that IMU-838 showed evidence of clinical activity in our Phase 2 CALVID-1 trial in hospitalized patients with moderate COVID-19. Also, in the first quarter of 2021, we reported positive top-line data from an investigator-sponsored Phase 2 proof-of-concept clinical trial of IMU-838 in primary sclerosing cholangitis which was conducted in collaboration with the Mayo Clinic. In addition, IMU-838 is currently being tested in a Phase 2 trial in patients with ulcerative colitis (CALDOSE-1 trial). Another investigator-sponsored Phase 2 clinical trial of IMU-838 in combination with oseltamivir in moderate to severe COVID-19 is ongoing in collaboration with the University Hospitals Coventry and Warwickshire NHS Trust (IONIC trial). If approved, we believe that IMU-838 has the potential to be a first-in-class DHODH inhibitor in inflammatory bowel disease ("IBD") and a best-in-class DHODH inhibitor in RRMS. In addition, prior clinical data with IMU-838 in rheumatoid arthritis ("RA") has contributed to our understanding of the safety profile of the drug at doses consistent with those currently under evaluation for the treatment of RRMS and IBD. Importantly, IMU-838 has an attractive pharmacokinetic, safety and tolerability profile and has already been tested in more than 800 individuals to date.

Our second drug candidate, IMU-935, is a highly potent and selective inverse agonist of a transcription factor called RORyt with additional activity on DHODH. We believe that the nuclear receptor RORyt is the main driver for the differentiation of Th17 cells and the release of cytokines involved in various inflammatory and autoimmune diseases. We believe this target is an attractive alternative to approved antibodies for targets, such as interleukin-23 ("IL-23"), the IL-17 receptor and IL-17 itself. We have observed strong cytokine inhibition targeting both Th1 and Th17 responses in preclinical testing, as well as indications of activity in animal models for psoriasis and IBD. Preclinical experiments indicated that, while leading to a potent inhibition of Th17 differentiation and cytokine secretion, IMU-935 did not affect thymocyte maturation. Based on these preclinical data, we believe that IMU-935 has potential to be a best-in-class therapy for various autoimmune diseases. A Phase 1 clinical trial exploring safety, pharmacodynamics and pharmacokinetics of IMU-935 is currently ongoing.

Our third program, IMU-856, which we believe to be novel, is an orally available, small molecule modulator that targets a protein which serves as a transcriptional regulator of intestinal barrier function. We have not yet disclosed the molecular target for IMU-856. Based on preclinical data, we believe this compound may represent a new treatment approach, as the mechanism of action targets the restoration of the intestinal barrier function in patients suffering from diseases like IBD, irritable bowel syndrome with diarrhea and other intestinal barrier function associated diseases. We believe that because IMU-856 avoids suppression of the immune functions, it may therefore maintain immune surveillance for patients. A Phase 1 clinical trial exploring safety, pharmacodynamics and pharmacokinetics of IMU-856 is currently ongoing.

Our business, operating results, financial condition and growth prospects are subject to significant risks and uncertainties, including the failure of our clinical trials to meet their endpoints, failure to obtain regulatory approval and needing additional funding to complete the development and commercialization of our three development programs.

Liquidity and Financial Condition

We have no products approved for commercial sale and have not generated any revenue from product sales. We have never been profitable and have incurred operating losses in each year since our inception in 2016. We have an accumulated deficit of approximately \$156.4 million as of June 30, 2021 and \$103.9 million as of December 31, 2020. Substantially all of our operating losses resulted from expenses incurred in connection with our research and development programs and from general and administrative costs associated with our operations.

We expect to incur significant expenses and increasing operating losses for the foreseeable future as we initiate and continue the preclinical and clinical development of our product candidates and add personnel necessary to advance our clinical pipeline of product candidates. We expect that our operating losses will fluctuate significantly from quarter-to-quarter and year-to-year due to timing of clinical development programs.

From inception through July 31, 2021, we have raised net cash of approximately \$258.8 million from private and public offerings of preferred and common stock. As of June 30, 2021, we had cash and cash equivalents of approximately \$87.2 million which does not include the approximately \$42.2 million raised in our equity offering which closed on July 19, 2021. With these funds, we expect to be able to fund our operations beyond twelve months from the date of the issuance of the accompanying condensed consolidated financial statements.

Recent Events

July 2021 Public Equity Offering

On July 15, 2021, we entered into an underwriting agreement with Piper Sandler & Co., as representative of the several underwriters listed on Schedule A thereto, in connection with our public offering of 4,500,000 shares of our common stock, \$0.0001 par value per share, at a public offering price of \$10.00 per share. Under the terms of the Underwriting Agreement, we granted the Underwriters an option, exercisable for 30 days, to purchase up to an additional 675,000 shares of Common Stock at the public offering price, less underwriting discounts and commissions.

On July 19, 2021, we closed the Offering. The net proceeds to us from the Offering were approximately \$42.2 million, after deducting underwriting discounts and commissions and estimated offering expenses payable us.

Phase 2 Trial of IMU-838 in RRMS (EMPhASIS Trial)

Our Phase 2 EMPhASIS trial of IMU-838 in RRMS consists of two cohorts: The full data set of Cohort 1, which evaluated efficacy and safety of 30 mg or 45 mg once daily IMU-838 compared to placebo, was published by the Company in August and September 2020, respectively. Cohort 2, which evaluates efficacy and safety of 10 mg once daily IMU-838 compared to placebo, is currently ongoing. On April 15, 2021, we announced interim data from Cohort 2 after 59 randomized patients completed week 12 magnetic resonance imaging ("MRI") assessments. We concluded from this data, along with previously published data from Cohort 1, that 30 mg once daily IMU-838 is the most appropriate dose for future Phase 3 trials in patients with RRMS. The experimental part of double-blind treatment in Cohort 2 has meanwhile been completed.

Phase 3 Program of IMU-838 in RRMS (ENSURE-1 and ENSURE-2 Trials)

As previously announced, we had been in discussions with regulatory authorities, including the U.S. Food and Drug Administration ("FDA") and the European Medicines Agency, regarding our planned Phase 3 program in RRMS. At the FDA's request, we had proceeded directly to submitting an Investigational New Drug ("IND") application for our Phase 3 program, instead of holding an end-of-Phase 2 meeting. On July 1, 2021, we announced FDA clearance of our IND application for the Phase 3 ENSURE program of our lead asset IMU-838 in patients with RRMS and that the FDA provided a May Proceed Letter to Immunic for the ENSURE-1 trial, one of the two identical Phase 3 trials.

The ENSURE program comprises two identical multicenter, randomized, double-blind Phase 3 trials designed to evaluate the efficacy, safety, and tolerability of IMU-838 versus placebo in RRMS patients. Based on IMU-838's robust activity in preventing lesion formation in our Phase 2 EMPhASIS trial in RRMS, the strong and consistent correlation observed between

lesion formation and clinical relapse in third-party clinical trials, and the drug's robust safety profile to date, we believe that this Phase 3 program provides a simple and straightforward path towards potential regulatory approval of IMU-838 in RRMS.

Each of the identical twin Phase 3 trials, titled ENSURE-1 and ENSURE-2, is expected to enroll approximately 1,050 adult patients with active relapsing MS at more than 100 sites in 14 countries, including the United States, Latin America, Central and Eastern Europe, and India. Patients will be randomized in a double-blinded fashion to either 30 mg daily doses of IMU-838 or placebo and the primary endpoint for both trials is time to first relapse up to 72 weeks. Key secondary endpoints include volume of new T2-lesions, time to confirmed disability progression, time to sustained clinically relevant changes in cognition, and percentage of whole brain volume change. With regard to the disability progression endpoint, the ENSURE program will apply a pooled analysis of disability worsening across both trials.

The ENSURE trials will be run concurrently, with dosing of the first patient expected in the second half of 2021. An interim analysis to assess event rates is planned to occur after a certain number of relapses have occurred in the double-blind treatment periods. This analysis is intended to inform potential sample size adjustment and help ensure that final study readout is not planned to occur before sufficient events have been achieved. This interim analysis is not intended as a futility analysis.

Phase 2 Program of IMU-838 in PMS (CALLIPER Trial)

On July 1, 2021, we announced that the FDA also cleared our separate IND application for the supportive Phase 2 CALLIPER trial of IMU-838 in patients with PMS.

The multicenter, randomized, double-blind, placebo-controlled Phase 2 CALLIPER trial is intended to run concurrently with and to complement the Phase 3 program in RRMS. In particular, CALLIPER is focused on progressive forms of multiple sclerosis ("MS") and designed to corroborate IMU-838's neuroprotective potential, as exemplified by slowing of brain atrophy and delay in disability worsening. Neurodegeneration is a key concern in both PMS and RRMS, since axonal and neural damage is responsible for the increasing and often severe disability experienced by patients. We believe that, if the CALLIPER trial is successful in showing a beneficial effect of IMU-838, this data, along with the ENSURE program and IMU-838's strong safety and tolerability profile, may allow for a meaningful clinical differentiation of IMU-838 from other oral MS medications and an attractive commercial positioning. Although a supportive trial, we do not believe that data from the CALLIPER trial are a pre-condition for filing a New Drug Application in relapsing MS.

The Phase 2 CALLIPER trial is expected to enroll approximately 450 patients at more than 70 sites in North America, Western, Central and Eastern Europe with patients randomized to either 45 mg daily doses of IMU-838 or placebo in a double-blinded fashion. The trial's primary endpoint is the annualized rate of percent brain volume change up to 120 weeks. Key secondary endpoints include the annualized rate of change in whole brain atrophy and time to 24-week confirmed disability progression based on the expanded disability status scale which may further support disability data from the ENSURE trials. Dosing of the first patient is expected in the third quarter of 2021.

An interim analysis comprising an unblinded analysis of serum neurofilament light chain ("NfL") is planned to occur once approximately half of the enrolled patients have completed 24 weeks of treatment. NfL has been shown consistently to correlate with disease activity in neurological disorders and has become one of the most important serum biomarkers for axonal damage over the past few years. As previously reported, results of the Phase 2 EMPhASIS trial of IMU-838 in RRMS showed a robust decrease in serum NfL at 24 weeks (-17.0% for 30 mg and -20.5% for 45 mg), as compared to baseline values, while the patients on placebo experienced a 6.5% increase in serum NfL over the same period.

Phase 2 Trial of IMU-838 in UC (CALDOSE-1 Trial)

We are continuing to make good progress in the recruitment of our Phase 2 CALDOSE-1 trial of IMU-838 in UC. Measures implemented by Immunic to further accelerate recruitment in this trial have shown beneficial effects despite the current pandemic situation. In addition, the positive Phase 2 data of IMU-838 in moderate COVID-19 and in RRMS have increased the confidence of CALDOSE-1 investigators and we believe that this is one of the main reasons of the continued strong enrollment seen in this trial. Recruitment is expected to be completed in the second half of 2021 and top-line data of the induction phase is expected to be available in the first half of 2022, as previously announced.

Phase 2 Trial of IMU-838 in PSC

On February 18, 2021, we announced positive top-line data from our investigator-sponsored proof-of-concept clinical trial of IMU-838 in PSC, which was conducted at Mayo Clinic in Arizona and Minnesota, both of which are tertiary referral centers for PSC patients. As previously announced, due to the COVID-19 pandemic, only 18 of the targeted 30 patients were enrolled

in the study (intent-to-treat population, "ITT"), of whom only 11 patients completed the full IMU-838 treatment course and were evaluable over the 24-week treatment period (per-protocol population, "PP").

As the next step, we are currently preparing a Phase 1 trial in hepatic impaired patients which will allow for dose optimization of IMU-838 for potential future clinical activities in PSC.

Phase 2 Trial of IMU-838 in Moderate COVID-19 (CALVID-1 Trial)

On February 17, 2021, we announced that IMU-838 has shown evidence of clinical activity in hospitalized patients with moderate COVID-19. This planned main analysis of our Phase 2 CALVID-1 trial was based on data from 204 randomized patients and included top-line clinical efficacy, safety, disease marker, and virology data. Although the trial found very low rates of serious complications (e.g., mortality, rate of ICU submissions and rate of invasive ventilations) in the population of hospitalized patients with moderate COVID-19, the data did show clinical activity of IMU-838 based on multiple secondary endpoints, including clinically meaningful improvements in time to clinical recovery, time to clinical improvement, and disease markers. In addition, high-risk patients and patients over 65 years of age experienced a more substantial treatment effect of IMU-838. IMU-838 also prevented many COVID-19-related adverse events of higher severity. Finally, IMU-838 was found to be safe and well-tolerated in this patient population.

The full analysis of all 223 randomized patients supports the conclusions made for the main analysis. However, the full analysis also provided data on a few additional endpoints that were not assessed in the main analysis. The rate and timing of anti-SARS-CoV-2 antibodies patients are developing in response to the infection was found to be identical between the IMU-838 and placebo treatment arms. We believe that this is an important confirmation of the mechanism of action of IMU-838 that targets highly metabolically activated cells involved in the disease process, but leaves antibody production relatively unaffected. Although no specific data are available at this point, we also believe that this data may support that vaccinations, including those for SARS-CoV-2, may be effectively given during IMU-838 therapy. Many immunomodulatory therapies are known to interfere with vaccinations, however several studies with another DHODH inhibitor (teriflunomide) had shown that this is not the case for these class of drugs. The CALVID-1 SARS-CoV-2 antibody data are supportive of this finding as well. The full analysis was also able to detect a relationship between drug trough levels in blood plasma and the clinical recovery endpoint. Higher drug levels correlate with shorter clinical recovery periods. We believe that this is another important finding to provide evidence of clinical activity in moderate COVID-19 patients.

Following discussions with regulatory authorities and with the progressing vaccination status in many countries, we believe that the opportunity to execute a Phase 3 program as a monotherapy and to benefit from any potential commercialization in this indication within a reasonable time frame is no longer a viable option.

The CALVID-1 trial was able to highlight important differentiators of IMU-838 as compared to existing medications in multiple sclerosis and ulcerative colitis. Many other immunomodulatory drugs commercially used provide a beneficial effect on the disease but are also known to have a higher rate of virus reactivations as adverse drug reactions. For example, some drugs used in ulcerative colitis are known for elevated rates of zoster virus reactivation (shingles). Drugs approved for multiple sclerosis have shown the rare but clinically very important side effect of progressive multifocal leukoencephalopathy ("PML") which is highly lethal and caused by a virus reactivation and infection of the brain tissue. IMU-838 has not shown an increased rate of infections and infestations, as compared to placebo, in the CALVID-1 trial. The same finding was already observed in other controlled clinical trials of IMU-838, including the Phase 2 EMPhASIS trial in RRMS. We believe that both the underlying selectivity of DHODH inhibition on the immune system and the broad antiviral properties of IMU-838 contribute to these findings.

The results of the CALVID-1 trial also corroborate the broad antiviral activity of IMU-838, already known from previous in vitro testing in a range of different virus families. We believe that these results support the ability of a host-cell directed antiviral mechanism of IMU-838 to provide antiviral activities largely independent of mutational variants. We will continue to explore the broad antiviral properties of IMU-838, including testing its combination potential with other drugs in further in vitro and in vivo preclinical studies. In other clinically important virus diseases, such as hepatitis or AIDS, combination treatments are already the mainstay of therapy, whereas monotherapy was found to be inferior to such combinations. This additional research will enable us to explore the potential of IMU-838 to target preparedness for potential future pandemics and for clinically important and underserved viral diseases.

Phase 1 Trial of IMU-935 in Healthy Volunteers and Moderate-to-Severe Psoriasis Patients

On July 12, 2021, we provided an update on our IMU-935 program, including new preclinical and clinical data. The main result from preclinical investigations was that IMU-935 inhibits cytokine production (thought to be a pre-condition for its use in

immunological and autoimmune diseases) while maintaining the known and required physiological functions of maturing T lymphocytes. In *ex vivo* mouse cell differentiation and maturation assays, IMU-935 was recently observed to selectively inhibit RORyt-dependent gene expression during Th17 differentiation without affecting either RORyt-dependent gene regulation relevant to thymocyte development, or the viability of these cells. In third-party research, impairment of thymocyte development has been shown to be associated with serious safety issues, including, among others, T cell malfunction and potential lymphoma formation. We believe that IMU-935's observed selectivity may enable it to inhibit both the generation of Th17 cells and the production of IL-17 cytokines that are responsible for the development of autoimmune diseases, without impairing thymocyte development, which is associated with the potential risk of lymphoma seen with other, third-party RORyt programs.

In addition, we announced that the full pharmacokinetic and blinded safety data from the single-ascending dose part of the ongoing Phase 1 trial of IMU-935, which is being conducted in Australia, in healthy volunteers is now available. Analysis of the full pharmacokinetic data set revealed dose-linear pharmacokinetics and a blood half-life that we believe may be appropriate for once or twice daily dosing. Although the trial is still blinded, no significant safety findings have been detected to date in the single-ascending dose cohort (up to 400 mg IMU-935 daily).

The multiple ascending dose part of the Phase 1 trial with 14-day daily dosing in healthy volunteers is ongoing and progressing. We expect to extend the trial in the third quarter of 2021 by including moderate-to-severe psoriasis patients given IMU-935 daily over 28 consecutive days, in order to assess safety and exploratory disease endpoints in psoriasis patients. Initial human data from this patient population is expected to be available in the second quarter of 2022.

Phase 1b Trial of IMU-935 in mCRPC

On July 12, 2021, we also presented new preclinical data highlighting IMU-935's therapeutic potential in CRPC. Recently published third-party studies have shown that RORy plays an important pro-tumor role by driving expression of the androgen receptor ("AR"), leading to tumor growth. During tumor progression, AR tends to mutate into AR-V7, leading to resistance of AR-axis-targeted therapies. In preclinical studies, IMU-935 was observed to inhibit the expression of mutated AR-V7, and the tumor growth of prostate cancer cell lines in vitro. Finally, we believe IMU-935's potency in inhibiting tumorigenesis-promoting IL-17 and Th17 cells in vitro may result in further antitumoral activity in humans.

Based on these strong preclinical results, we are currently preparing an open-label Phase 1 dose escalation trial designed to establish a potential recommended Phase 2 dose and to assess safety, tolerability, anti-tumor activity, biomarkers and pharmacokinetics of IMU-935 in patients with progressive mCRPC. The Principal Investigator of the trial is Johann Sebastian de Bono, MD, PhD, Regius Professor of Cancer Research and Professor in Experimental Cancer Medicine, The Institute of Cancer Research and The Royal Marsden NHS Foundation Trust, London, United Kingdom. The trial is expected to commence in the fourth quarter of 2021.

Phase 2a Trial of IMU-935 in GBS

As previously announced, we may perform a Phase 2a proof-of-activity trial in GBS. Patients diagnosed with this rare disease have very few therapeutic options and we believe that published third-party data supports a central role of Th17 cells in this disease.

Phase 1 Trial of IMU-856

A clinical Phase 1 trial of IMU-856 is ongoing and progressing in Australia. The trial includes single and multiple ascending dose parts in healthy volunteers to assess safety, pharmacodynamics and pharmacokinetics of IMU-856. Subsequently, we plan to extend this trial to assess biomarkers, disease symptoms, safety and drug trough levels in patients with several conditions involving an impaired bowel barrier function. The single ascending dose cohorts for the current tablet formulation of IMU-856 have been completed. Based on the favorable data available so far, we expect to receive clearance from the Ethics Committee in Australia to proceed to the MAD part in the near future as well.

Appointment of Inderpal Singh as General Counsel

On June 1, 2021, we announced the appointment of Inderpal Singh as our General Counsel. In his new role, Mr. Singh is responsible for legal and compliance matters and has become part of the management team of Immunic.

Settlement Agreement with 4SC AG

On March 31, 2021, Immunic AG, a wholly-owned subsidiary of the Company, and 4SC AG entered into a Settlement Agreement, pursuant to which Immunic AG will settled its remaining obligation of the 4.4% royalty on net sales for \$17.25 million. The payment was made 50% in cash and 50% in shares of Immunic's common stock (the "Shares"). Pursuant to the Agreement, the Company filed a resale shelf registration statement on Form S-3 covering the resale of the Shares. With the execution of the Agreement, no further payment obligations remain between Immunic AG and 4SC AG.

Executive Chairman Agreement with Duane Nash

On April 15, 2020, the compensation committee of the board of directors of Immunic independently reviewed and approved entering into an employment agreement with the current Chairman of the Board, Duane Nash, MD, JD, MBA and pursuant to such approval, on April 17, 2020, the Company and Dr. Nash entered into the Executive Chairman Agreement. The Executive Chairman Agreement establishes an "at will" employment relationship pursuant to which Dr. Nash serves as Executive Chairman and contemplated a term that ends on October 15, 2020, which was subsequently extended to April 15, 2021. On April 15, 2021, the Company and Dr. Nash entered into an addendum to extend the term of the Executive Chairman Agreement to April 15, 2022. In connection with the Agreement, the Company made a one-time award to Dr. Nash of an option to purchase 90,000 shares of Company common stock, which vest monthly commencing on May 15, 2021, and to increase Dr. Nash's monthly base salary to \$27,960 from \$25,417.

Components of Results of Operations

Revenue

To date, we have not generated any revenue from product sales and do not expect to generate any revenue from the sale of products in the foreseeable future. If our development efforts for our product candidates are successful and result in regulatory approval, we may generate revenue in the future from product sales. We cannot predict if, when, or to what extent we will generate revenue from the commercialization and sale of our product candidates. We may never succeed in obtaining regulatory approval for any of our product candidates.

Research and Development Expenses

Research and development expenses consist of costs associated with our research activities, including our product discovery efforts and the development of our product candidates. Our research and development expenses include:

- external research and development expenses and milestone payments incurred under arrangements with third parties, such as CROs, contract manufacturing organizations, collaborations with partners, consultants, and our scientific advisors; and
- internal personnel expenses.

We expense research and development costs as incurred. Non-refundable advance payments for goods and services that will be used in future research and development activities are capitalized as prepaid expenses and expensed when the service has been performed or when the goods have been received.

Since our inception in March 2016, we have spent a total of approximately \$109.7 million in research and development expenses through June 30, 2021.

These costs primarily include external development expenses and internal personnel expenses for the three development programs, IMU-838, IMU-935 and IMU-856. We have spent the majority of our research and development resources on IMU-838, our lead development program for clinical trials in RRMS, UC, COVID-19 and PSC.

In August 2019, Immunic AG received a grant of up to approximately \$730,000 from the German Federal Ministry of Education and Research, in support of the InnoMuNiCH (Innovations through Munich-Nippon Cooperation in Healthcare)

project. The grant funds will be used to fund a three-year research project relating to autoimmune diseases by us and our three project partners. Since the inception of the grant, we have recorded \$264,000 which was classified in Other income in the accompanying consolidated statement of operations.

We expect our research and development expenses to increase for the foreseeable future as we continue to conduct ongoing regulatory and development activities, initiate new preclinical and clinical trials and build our pipeline. The process of commercialization, conducting clinical trials and preclinical studies necessary to obtain regulatory approval is costly and time consuming. We may never succeed in achieving regulatory approval for any of our product candidates.

Successful development of product candidates is highly uncertain and may not result in approved products. Completion dates and completion costs can vary significantly for each product candidate and are difficult to predict. We anticipate that we will make determinations as to which programs to pursue and how much funding to direct to each program on an ongoing basis in response to the development and regulatory success of each product candidate, and ongoing assessments as to each product candidate's commercial potential.

General and Administrative Expenses

General and administrative expenses consist primarily of personnel expenses, professional fees for legal, accounting, tax and business consulting services, insurance premiums and stock-based compensation.

Other Income (Expense), Net

Interest Income

Interest income consists of interest earned on our money market funds, which are a portion of our cash and cash equivalents balance. Our interest income has not been significant due to low interest rates earned on invested balances.

Other Income (Expense), Net

Other income (expense) consists primarily of a research and development tax incentive related to clinical trials performed in Australia, foreign currency transaction gains and losses related to long-term intercompany loans that are payable in the foreseeable future and the recognition of deferred revenue related to research and development expenses in connection with our option and licensing agreement with Daiichi Sankyo Co., Ltd..

Results of Operations

Comparison of the Three Months Ended June 30, 2021 and 2020

The following table summarizes our operating expenses for the three months ended June 30, 2021 and 2020:

	Three Mont	hs Ended Jun	e 30,	Change				
	 2021		2020		\$	%		
(dollars in thousands)			(un	audited)			<u></u>	
Operating expenses:								
Research and development	\$ 15,738	\$	9,987	\$	5,751	58	%	
General and administrative	3,432		2,235		1,197	54	%	
4SC Royalty Settlement (see Note 4)	_		_		_		N/A	
Total operating expenses	 19,170		12,222		6,948	57	%	
Loss from operations	(19,170)		(12,222)		(6,948)	57	%	
Total other income (expense)	 1,236		764		472	62	%	
Net loss	\$ (17,934)	\$	(11,458)	\$	(6,476)	57	%	

Research and development expenses increased by \$5.8 million during the three months ended June 30, 2021, as compared to the three months ended June 30, 2020. The increase reflects (i) a \$2.6 million increase in preparation costs related to the Phase 3 program of IMU-838 in multiple sclerosis, (ii) a \$1.8 million increase in external development costs related to the Phase 2 clinical trial of IMU-838 in patients with ulcerative colitis, (iii) a \$1.7 million increase in preparation costs related to the Phase 2 trial of IMU-838 in progressive multiple sclerosis, (iv) a \$0.6 million increase in external development costs related

to the Phase 1 clinical trial of IMU-935, (v) a \$0.5 million increase in external development costs related to the Phase 1 clinical trial of IMU-856, (vi) a \$0.7 million increase in personnel expenses in research and development and (vii) \$0.2 million related to increased costs across numerous categories. The increases were partially offset by a decrease of \$2.3 million related to drug supply costs for IMU-838, IMU-935 and IMU-856.

General and administrative expenses increased by \$1.2 million during the three months ended June 30, 2021, as compared to the three months ended June 30, 2020. The increase is primarily due to (i) a \$0.7 million increase related to non-cash stock compensation expense, (ii) a \$0.3 million increase of legal and consultancy costs and (iii) a \$0.2 million increase across numerous categories.

Other income increased by \$0.5 million during the three months ended June 30, 2021, as compared to the three months ended June 30, 2020. The increase is primarily attributable to (i) a \$0.6 million foreign exchange gain on a \$52.0 million intercompany loan between Immunic, Inc. and Immunic AG and (ii) a \$0.4 million increase in research and development tax incentives for clinical trials in Australia as a result of increased spending on clinical trials in Australia. The increase was partially offset by a \$0.5 million decrease in recognized deferred income attributable to reimbursements of research and development expenses in connection with the Daiichi Sankyo Agreement realized in the second quarter of 2020.

Comparison of the Six Months Ended June 30, 2021 and 2020

The following table summarizes our operating expenses for the six months ended June 30, 2021 and 2020:

		Six Months	s Ended June	30,	Change					
		2021		2020		\$	%			
(dollars in thousands)				(u	naudited)					
Operating expenses:										
Research and development	\$	27,257	\$	16,421	\$	10,836	66	%		
General and administrative		7,050		4,815		2,235	46	%		
4SC Royalty Settlement (see Note 4)		17,250		_		17,250		N/A		
Total operating expenses	\$	51,557	\$	21,236	\$	30,321	143	%		
Loss from operations	·	(51,557)		(21,236)		(30,321)	143	%		
Total other income (expense)		(911)		1,291		(2,202)	(171)	%		
Net loss		(52,468)	\$	(19,945)	\$	(32,523)	163	%		

Research and development expenses increased by \$10.8 million during the six months ended June 30, 2021, as compared to the six months ended June 30, 2020. The increase reflects (i) a \$2.9 million increase in preparation costs related to the Phase 3 program of IMU-838 in multiple sclerosis, (ii) a \$2.4 million increase in preparation costs related to the Phase 2 trial of IMU-838 in progressive multiple sclerosis, (iii) a \$2.2 million increase in external development costs related to the Phase 2 clinical trial of IMU-838 in patients with ulcerative colitis, (iv) a \$1.4 million increase in external development costs related to the Phase 2 clinical trial in patients with COVID-19 as trials did not start until the second quarter of 2020, (v) a \$0.8 million increase in external development costs related to the Phase 1 clinical trial of IMU-856, (vi) a \$0.6 million increase in external development costs related to the Phase 1 clinical trial of IMU-935, (vii) a \$1.0 million increase in personnel expenses in research and development and (viii) \$1.0 million related to increased costs across numerous categories. The increases were partially offset by a decrease of \$1.5 million in drug supply costs for IMU-856.

General and administrative expenses increased by \$2.2 million during the six months ended June 30, 2021, as compared to the six months ended June 30, 2020. The increase is primarily due to (i) a \$1.7 million increase related to non-cash stock compensation expense and (ii) a \$0.5 million increase across numerous categories, primarily for legal and consultancy services.

On March 31, 2021, Immunic AG and 4SC AG entered into a Settlement Agreement, pursuant to which Immunic AG settled its remaining obligation of the 4.4% royalty on net sales for \$17.25 million (Tranche III of the Agreement). The payment was made 50% in cash and 50% in shares of Immunic's common stock. No further payment obligations remain between Immunic and 4SC AG.

Other income decreased by \$2.2 million during the six months ended June 30, 2021, as compared to the six months ended June 30, 2020. The decrease is primarily attributable to (i) a \$1.9 million foreign exchange loss on a \$52.0 million intercompany loan between Immunic, Inc. and Immunic AG and (ii) a \$0.9 million decrease in recognized deferred income

attributable to reimbursements of research and development expenses in connection with the Daiichi Sankyo Agreement realized in the first six months of 2020. The decrease was partially offset by a \$0.6 million increase in research and development tax incentives for clinical trials in Australia as a result of increased spending on clinical trials in Australia.

Liquidity and Capital Resources

Financial Condition

We have no products approved for commercial sale and have not generated any revenue from product sales. We have never been profitable and have incurred operating losses in each year since our inception in 2016. We have an accumulated deficit of approximately \$156.4 million at June 30, 2021 and \$103.9 million as of December 31, 2020. Substantially all of our operating losses resulted from expenses incurred in connection with our research and development programs and from general and administrative costs associated with our operations.

We expect to incur significant expenses and increasing operating losses for the foreseeable future as we initiate and continue the preclinical and clinical development of our product candidates and add personnel necessary to operate as a company with an advanced clinical pipeline of product candidates. To the extent additional funds are necessary to meet long-term liquidity needs as we continue to execute our business strategy, we anticipate that they will be obtained through the incurrence of indebtedness, additional equity financings or a combination of these potential sources of funds, although we can provide no assurance that these sources of funding will be available on reasonable terms.

From inception through July 31, 2021, we have raised net cash of approximately \$258.8 million from private and public offerings of preferred and common stock. As of June 30, 2021, we had cash and cash equivalents of approximately \$87.2 million which does not include the approximately \$42.2 million raised in our equity offering which closed on July 19, 2021. With these funds, we expect to be able to fund our operations beyond twelve months from the date of the issuance of the accompanying condensed consolidated financial statements.

In November 2020, we filed a shelf registration statement on Form S-3 (the "2020 Shelf Registration Statement"). The 2020 Shelf Registration Statement permits the offering, issuance and sale of up to \$250.0 million of common stock, preferred stock, warrants, debt securities, and/or units in one or more offerings and in any combination of the foregoing.

In December 2020, we filed a Prospectus Supplement for the offering, issuance and sale of up to a maximum aggregate offering price of \$50.0 million of common stock that may be issued and sold under an additional at-the-market sales agreement with SVB Leerink as agent. We intend to use the net proceeds from the offering to continue to fund the ongoing clinical development of our product candidates and for other general corporate purposes, including funding existing and potential new clinical programs and product candidates. The December 2020 ATM will terminate upon the earlier of (i) the issuance and sale of all of the shares through SVB Leerink on the terms and subject to the conditions set forth in the December 2020 ATM or (ii) termination of the December 2020 ATM as otherwise permitted thereby. The December 2020 ATM may be terminated at any time by either party upon ten days' prior notice, or by SVB Leerink at any time in certain circumstances, including the occurrence of a material adverse effect on us. As of June 30, 2021, \$50.0 million in capacity remains under the December 2020 ATM.

Debt Financing

On October 19, 2020, we and Immunic AG entered into the Loan Agreement with EIB, pursuant to which EIB agreed to provide Immunic AG with a term loan in an aggregate amount of up to €24.5 million to support the development of our lead asset, IMU-838, in moderate COVID-19, to be made available to be drawn in three tranches, with the second and third tranches subject to the completion of certain pre-defined milestones. We have the right to defer payment of principal and interest on the first and second tranches until five years after the respective borrowing dates, at which point such tranches must be repaid in full. The third tranche is repayable in annual installments commencing one year after its respective borrowing date and must be repaid in full no later than five years after such date. Any outstanding borrowings under the Loan Agreement will accrue interest as provided in the Loan Agreement.

From January 1, 2021 until December 31, 2030, we and Immunic AG are also obligated to pay EIB a very low single digit percentage of our revenue, as set forth in the Loan Agreement, subject to certain conditions and limitations tied to the total amount drawn under the Loan Agreement and subject to a cap of €8.6 million if only the first tranche is drawn and subject to a

cap of €30 million if the full loan amount is drawn. The Loan Agreement also includes certain prepayment penalties that may be triggered by certain prepayments prior to the maturity date.

We will guarantee Immunic AG's obligations to EIB pursuant to a Guarantee Agreement to be executed by Immunic, Inc., Immunic AG and EIB. As of June 30, 2021, no funds have been drawn down under the Loan Agreement.

Future Capital Requirements

As noted above, we have not generated any revenue from product sales and we do not know when, or if, we will generate any revenue from product sales. We do not expect to generate any revenue from product sales unless and until we obtain regulatory approval for and commercialize any of our product candidates. At the same time, we expect our expenses to increase as we continue the ongoing research, development, manufacture and clinical trials of, and seek regulatory approval for, our product candidates. We expect to incur additional costs associated with operating as a public company. In addition, subject to obtaining regulatory approval of any of our product candidates, we anticipate that we will need substantial additional funding in connection with our continuing operations.

Our future capital requirements are difficult to forecast and will depend on many factors, including but not limited to:

- · the terms and timing of any strategic alliance, licensing and other arrangements that we may establish;
- the initiation and progress of our ongoing preclinical studies and clinical trials for our product candidates;
- · the number of programs we pursue;
- the outcome, timing and cost of regulatory approvals;
- the cost and timing of hiring new employees to support our continued growth;
- · the costs involved in patent filing, prosecution, and enforcement; and
- · the costs and timing of having clinical supplies of our product candidates manufactured.

Until we can generate a sufficient amount of product revenue to finance cash requirements, we expect to finance our future cash needs primarily through the issuance of additional equity and potentially through borrowings and strategic alliances with third parties. To the extent that we raise additional capital through the issuance of additional equity or convertible debt securities, the ownership interest of our shareholders will be diluted, and the terms of these securities may include liquidation or other preferences that adversely affect the rights of our existing shareholders. Debt financing, if available, may involve agreements that include covenants limiting or restricting our ability to take specific actions, such as incurring additional debt, making capital expenditures or declaring dividends. If we raise additional funds through marketing and distribution arrangements or other collaborations, strategic alliances or licensing arrangements with third parties, we may have to relinquish valuable rights to our technologies, future revenue streams, research programs or product candidates or grant licenses on terms that may not be favorable. If we are unable to raise additional funds through equity or debt financings when needed, we may be required to delay, limit, reduce or terminate our product development or commercialization efforts or grant rights to develop and market product candidates to third parties that we would otherwise prefer to develop and market ourselves.

As of June 30, 2021, we had cash and cash equivalents of approximately \$87.2 million which does not include the approximately \$42.2 million raised in the equity offering which closed on July 19, 2021.

Cash Flows

The following table shows a summary of our cash flows for the six months ended June 30, 2021 and 2020:

	Six Months Ended June 30,			
	 2021		2020	
(in thousands)	 (unaudited)			
Cash (used in) provided by:				
Operating activities	\$ (41,953)	\$	(20,256)	
Investing activities	(28)		(59)	
Financing activities	_		39,780	

Operating activities

During the six months ended June 30, 2021, operating activities used \$42.0 million of cash. The use of cash primarily resulted from (i) our net loss of \$52.5 million adjusted for non-cash charges of \$8.6 million related to common stock issued for the 4SC AG transaction, \$1.9 million for an unrealized foreign currency loss, \$3.1 million related to stock-based compensation and depreciation and amortization as well as a \$3.1 million net increase in our operating assets and liabilities. Changes in our operating assets and liabilities during the six months ended June 30, 2021 consisted primarily of (i) an increase of \$8.6 million in other current assets and prepaid expenses, partially offset by an increase of \$5.5 million in our other current liabilities

During the six months ended June 30, 2020, operating activities used \$20.3 million of cash. The use of cash primarily resulted from (i) our net loss of \$19.9 million adjusted for non-cash charges of \$742,000 related to stock-based compensation and depreciation and amortization and (ii) a \$1.1 million net increase in our operating assets and liabilities. Changes in our operating assets and liabilities during the six months ended June 30, 2020 consisted primarily of (i) an increase of \$1.5 million in other current assets and prepaid expenses primarily due to prepayments related to certain clinical trial and drug supply contracts which was partially offset by (ii) \$0.4 million related to an increase in our current liabilities.

Investing activities

Net cash used in investing activities was \$28,000 and \$59,000 during the six months ended June 30, 2021, and 2020, respectively, which was related to the purchase of property and equipment.

Financing Activities

There were no cash based financing activities during the six months ended June 30, 2021.

Net cash provided by financing activities was \$39.8 million during the six months ended June 30, 2020 consisting of net cash proceeds from the sale of common stock under the ATM and the April 2020 and June 2020 equity offerings.

Off-Balance Sheet Arrangements

Through June 30, 2021, we have not entered into and did not have any relationships with unconsolidated entities or financial collaborations, such as entities often referred to as structured finance or special purpose entities, established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purpose.

Contractual Obligations

Maturities of the operating lease obligation are as follows as of June 30, 2021:

2021	\$ 229,000
2022	459,000
2023	309,000
2024	235,000
2025	117,000
Total	1,349,000
Interest	130,000
PV of obligation	\$ 1,219,000

As of June 30, 2021, we have non-cancelable contractual obligations under certain agreements related to our development programs IMU-838, IMU-935 and IMU-856 totaling approximately \$0.6 million, all of which is expected to be paid in 2021.

Critical Accounting Policies and Estimates

Our unaudited condensed consolidated financial statements are prepared in conformity with U.S. GAAP. The preparation of our unaudited condensed consolidated financial statements and related disclosures requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, costs and expenses, and the disclosure of contingent assets and liabilities in our financial statements. We base our estimates on historical experience, known trends and events and various other factors that we believe are reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. We evaluate our estimates and assumptions on an ongoing basis. Our actual results may differ from these estimates under different assumptions or conditions. We have reviewed these critical accounting policies and related disclosures with the Audit Committee of our Board.

During the first six months of 2021, there were no significant changes in our critical accounting policies or in the methodology used for estimates. Our significant accounting policies are described in more detail in (i) Note 2 to our unaudited condensed consolidated financial statements included elsewhere in this Quarterly Report and (ii) our audited consolidated financial statements for the years ended December 31, 2020 and 2019 included in our Annual Report on Form 10-K filed on February 26, 2021.

Recently Issued Accounting Standards

There are no new applicable accounting standards identified in this Quarterly Report. Note 2 to the audited consolidated financial statements for the years ended December 31, 2020 and 2019 included in our Annual Report on Form 10-K filed with the SEC on February 26, 2020 also does not contain any new applicable accounting standards but does contain information on recently adopted accounting standards.

Item 3. Quantitative and Qualitative Disclosures about Market Risk

Interest Rate Sensitivity

We had cash and cash equivalents of \$87.2 million as of June 30, 2021, which were held for working capital purposes. We do not enter into investments for trading or speculative purposes. We do not believe that we have any material exposure to changes in the fair value of these investments as a result of changes in interest rates due to their short-term nature. However, \$40.0 million of these funds are held in German bank accounts that were earning negative interest of 0.5% as of June 30, 2021. Decreases or increases in interest rates, however, will reduce or increase future investment income, respectively, to the extent we have funds available for investment.

Foreign Currency Exchange Risk

Our primary research and development operations are conducted in our facilities in Germany. We have entered and may continue to enter into international agreements, primarily related to our clinical studies. Accordingly, we have exposure to foreign currency exchange rates and fluctuations between the U.S. dollar and foreign currencies, primarily the euro and the Australian dollar, which could adversely affect our financial results, including income and losses as well as assets and liabilities. To date, we have not entered into, and do not have any current plans to enter into, any foreign currency hedging transactions or derivative financial transactions. Our exposure to foreign currency risk will fluctuate in future periods as our research and clinical development activities in Europe and Australia change. We currently maintain a significant amount of our assets outside of the U.S.

The functional currencies of our foreign subsidiaries are the applicable local currencies. Accordingly, the effects of exchange rate fluctuations on the net assets of these operations are accounted for as translation gains or losses in accumulated other comprehensive income (loss) within stockholders' equity. Foreign currency transaction gains and losses related to long-term intercompany loans that are payable in the foreseeable future are recorded in Other Income (Expense). Our German subsidiaries are currently a significant portion of our business and, accordingly, a change of 10% in the currency exchange rates, primarily the euro, could have a material impact on their financial position or results of operations.

Although operating in local currencies may limit the impact of currency rate fluctuations on the results of operations of our German and Australian subsidiaries, rate fluctuations may impact the consolidated financial position as the assets and

liabilities of our foreign operations are translated into U.S. dollars in preparing our condensed consolidated balance sheets. As of June 30, 2021, our German subsidiaries had net current assets (defined as current assets less current liabilities), subject to foreign currency translation risk, of \$40.8 million. A decrease of approximately \$4.1 million in net current assets would result as of June 30, 2021, from a hypothetical 10% adverse change in quoted foreign currency exchange rates, primarily due to the euro. In addition, a 10% change in the foreign currency exchange rates for the six months ended June 30, 2021, would have impacted our net loss by approximately \$4.5 million, primarily due to the euro.

Effects of Inflation

We do not believe that inflation and changing prices had a significant impact on our results of operations for any periods presented herein.

Item 4. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

An evaluation was carried out, under the supervision of and with the participation of our management, including our Chief Executive Officer and our Principal Financial Officer, of the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15 (e)) under the Securities Exchange Act of 1934 ("the Exchange Act"), as of the end of the period covered by this report. Based on such evaluation, our Chief Executive Officer and our Principal Financial Officer have concluded that our disclosure controls and procedures are effective to ensure that the information required to be disclosed by us in the reports we file or submit under the Exchange Act was recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms.

Changes in Internal Control over Financial Reporting

There was no change in our internal control over financial reporting that occurred during the six months ended June 30, 2021 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Part II - OTHER INFORMATION

Item 1. Legal Proceedings

We are not currently a party to any litigation, nor are we aware of any pending or threatened litigation against us, that we believe would materially affect our business, operating results, financial condition or cash flows. Our industry is characterized by frequent claims and litigation including securities litigation, claims regarding patent and other intellectual property rights and claims for product liability. In particular, in connection with the Transaction with Immunic AG, pursuant to which Immunic AG became our wholly-owned subsidiary, it is not uncommon for lawsuits to be filed alleging lack of process or breach of fiduciary duties by directors, and we may face such suits in the future. As a result, in the future, we may be involved in various legal proceedings from time to time.

Item 1A. Risk Factors

There have been no material changes to the risk factors described in our Annual Report on Form 10-K for the year ended December 31, 2020 filed with the SEC on February 26, 2021.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

None.

Item 3. Defaults Upon Senior Securities

Not applicable.

Item 4. Mine Safety Disclosures

Not applicable.

Item 5. Other Information

None.

Item 6. Exhibits

⁺ Indicates a management contract or compensatory plan or arrangement.

^{*} In accordance with Item 601(b)(32)(ii) of Regulation S-K and SEC Release No. 33-8238 and 34-47986, Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, the certifications furnished in Exhibits 32.1 and 32.2 hereto are deemed to accompany this Form 10-K and will not be deemed "filed" for purposes of Section 18 of the Exchange Act. Such certifications will not be deemed to be incorporated by reference into any filings under the Securities Act or the Exchange Act, except to the extent that the registrant specifically incorporates it by reference.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

IMMUNIC, INC.

Date: August 6, 2021 By: /s/ Daniel Vitt

Daniel Vitt

Chief Executive Officer and President

DESCRIPTION OF CAPITAL STOCK

General

Our authorized capital stock consists of 130,000,000 shares of common stock, par value \$0.0001 per share, and 20,000,000 shares of preferred stock, par value \$0.0001 per share.

The following description of our common stock summarizes its material terms and provisions, but it is not complete. For the complete terms of our common stock, please refer to our certificate of incorporation and our bylaws that are incorporated by reference into the Annual Report on Form 10-K of which this exhibit is a part.

Common Stock

As of December 31, 2020, there were 21,168,240 shares of common stock outstanding. The holders of our common stock are entitled to one vote for each share held of record on all matters submitted to a vote of the stockholders. The holders of common stock are not entitled to cumulative voting rights with respect to the election of directors, and as a consequence, minority stockholders will not be able to elect directors on the basis of their votes alone.

Subject to preferences that may be applicable to any then outstanding shares of preferred stock, holders of common stock are entitled to receive ratably such dividends as may be declared by the board of directors out of funds legally available therefor. In the event of a liquidation, dissolution or winding up of us, holders of the common stock are entitled to share ratably in all assets remaining after payment of liabilities and the liquidation preferences of any then outstanding shares of preferred stock. Holders of common stock have no preemptive rights and no right to convert their common stock into any other securities. There are no redemption or sinking fund provisions applicable to our common stock. All outstanding shares of common stock are fully paid and non-assessable. The rights, preferences and privileges of holders of our common stock are subject to, and may be adversely affected by, the rights of the holders of shares of any of our outstanding preferred stock.

Listing

Our common stock is listed on the Nasdaq Global Select Market under the symbol "IMUX."

Transfer Agent and Registrar

The transfer agent and registrar for our common stock is American Stock Transfer & Trust Company, LLC ("AST"). The transfer agent and registrar's address is 6201 15th Avenue, Brooklyn, New York 11219.

Dividends

We have not declared any cash dividends on our common stock since inception and we do not anticipate paying any cash dividends on our common stock in the foreseeable future.

Possible Anti-Takeover Effects of Delaware Law and our Charter Documents

Some provisions of Delaware law, our amended and restated certificate of incorporation and our amended and restated bylaws could make the following transactions more difficult: an acquisition of us by means of a tender offer, an acquisition of us by means of a proxy contest or otherwise, or the removal of our incumbent officers and directors. It is possible that these provisions could make it more difficult to accomplish or could deter transactions that stockholders may otherwise consider to be in their best interest or in our best interest, including transactions which provide for payment of a premium over the market price for our shares.

These provisions, summarized below, are intended to discourage coercive takeover practices and inadequate takeover bids. These provisions are also designed to encourage persons seeking to acquire control of us to first negotiate with our board of directors. We believe that the benefits of the increased protection of our potential ability to negotiate with the proponent of an unfriendly or unsolicited proposal to acquire or restructure us outweigh the disadvantages of discouraging these proposals because negotiation of these proposals could result in an improvement of their terms.

Delaware Anti-Takeover Statute

We are subject to Section 203 of the Delaware General Corporation Law (the "DGCL"), an anti-takeover statute. In general, Section 203 of the DGCL prohibits a publicly held Delaware corporation from engaging in a "business combination" with an "interested stockholder" for a period of three years following the time the person became an interested stockholder, unless the business combination or the acquisition of shares that resulted in a stockholder becoming an interested stockholder is approved in a prescribed manner. Generally, a "business combination" includes a merger, asset or stock sale, or other transaction resulting in a financial benefit to the interested stockholder. Generally, an "interested stockholder" is a person who, together with affiliates and associates, owns (or within three years prior to the determination of interested stockholder status did own) 15% or more of a corporation's voting stock. The existence of this provision would be expected to have an anti-takeover effect with respect to transactions not approved in advance by our board of directors, including discouraging attempts that might result in a premium over the market price for the shares of common stock held by our stockholders.

Undesignated Preferred Stock.

The ability of our board of directors, without action by the stockholders, to issue up to 20,000,000 shares of undesignated preferred stock with voting or other rights or preferences as designated by our board of directors could impede the success of any attempt to effect a change in control of us. These and other provisions may have the effect of deferring hostile takeovers or delaying changes in control or management of our company.

Requirements for Advance Notification of Stockholder Nominations and Proposals.

Our amended and restated bylaws establish advance notice procedures with respect to stockholder proposals to be brought before a stockholder meeting and the nomination of candidates for election as directors, other than nominations made by or at the direction of the board of directors or a committee of the board of directors.

Elimination of Stockholder Action by Written Consent.

Our amended and restated certificate of incorporation eliminates the right of stockholders to act by written consent without a meeting.

Staggered Board.

Our board of directors is divided into three classes. The directors in each class will serve for a three-year term, one class being elected each year by our stockholders. This system of electing and removing directors may tend to discourage a third party from making a tender offer or otherwise attempting to obtain control of us, because it generally makes it more difficult for stockholders to replace a majority of the directors.

Removal of Directors.

Our amended and restated certificate of incorporation provides that no member of our board of directors may be removed from office by our stockholders except for cause and, in addition to any other vote required by law, upon the approval of the holders of at least two-thirds in voting power of the outstanding shares of stock entitled to vote in the election of directors.

Stockholders Not Entitled to Cumulative Voting.

Our amended and restated certificate of incorporation does not permit stockholders to cumulate their votes in the election of directors. Accordingly, the holders of a majority of the outstanding shares of our common stock entitled to vote in any election of directors can elect all of the directors standing for election, if they choose, other than any directors that holders of our preferred stock may be entitled to elect.

Authorized but Unissued Shares

Our authorized but unissued shares of common stock and preferred stock will be available for future issuance without stockholder approval. We may use additional shares for a variety of purposes, including future public offerings to raise additional capital, to fund acquisitions and as employee compensation. The existence of authorized but unissued shares of undesignated preferred stock may enable our board of directors to render more difficult or to discourage an attempt to obtain control of us by means of a merger, tender offer, proxy contest or otherwise. For example, if in the due exercise of its fiduciary

obligations, our board of directors were to determine that a takeover proposal is not in the best interests of us or our stockholders, our board of directors could cause shares of preferred stock to be issued without stockholder approval in one or more private offerings or other transactions that might dilute the voting or other rights of the proposed acquirer, stockholder or stockholder group. The rights of holders of our common stock described above will be subject to, and may be adversely affected by, the rights of any preferred stock that we may designate and issue in the future. The issuance of shares of undesignated preferred stock could decrease the amount of earnings and assets available for distribution to holders of shares of common stock. The issuance may also adversely affect the rights and powers, including voting rights, of these holders and may have the effect of delaying, deterring or preventing a change in control of us.

Director Liability

Our bylaws limit the extent to which our directors are personally liable to us and our stockholders, to the fullest extent permitted by the DGCL. The inclusion of this provision in our bylaws may reduce the likelihood of derivative litigation against directors and may discourage or deter stockholders or management from bringing a lawsuit against directors for breach of their duty of care.

The provisions of Delaware law, our amended and restated certificate of incorporation and our amended and restated bylaws could have the effect of discouraging others from attempting hostile takeovers and, as a consequence, they may also inhibit temporary fluctuations in the market price of our common stock that often result from actual or rumored hostile takeover attempts. These provisions may also have the effect of preventing changes in the composition of our board and management. It is possible that these provisions could make it more difficult to accomplish transactions that stockholders may otherwise deem to be in their best interest.

CERTIFICATIONS

I, Daniel Vitt, certify that:

- 1. I have reviewed this Quarterly Report on Form 10-Q of Immunic, Inc.;
- 2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of and for the periods presented in this report;
- 4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
- a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
- b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
- c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
- d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
- 5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
- a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
- b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
