- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- May include worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

**Note 6:** Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

This is to certify that we have granted permission to Keith Warren to hunt one Bontebok ram on Wildschutsberg Game Reserve in the Eastern Cape.

It is a private herd which was started from stock purchased in 2006. These Bontebok were inspected on 3 April 2006 and certified "pure". Only pure Bontebok genetics are introduced onto the property. We have done DNA tests on the herd from time to time and have always found them to be pure Bontebok.

The ram was a lone bachelor and its removal would not impact negatively on the rest of the herd.

Surveys within South Africa's Private Sector shows an estimated number of over 7000 Bontebok in the country. Private Bontebok populations grow annually by 25,2% despite of annual hunting of 3,1%. Trophy hunting is crucial for the survival of this specie.

<sup>1</sup> = Bontebok – 100% pure bontebok as determined by the nuclear test, using microsatellite markers and incorporating a 90% threshold.

<sup>2</sup> = Hybrid – animals below the threshold for bontebok DNA. These animals pose a high risk to the pure bontebok population.

<sup>3</sup> = Blesbok – 100% pure blesbok as determined by the nuclear test, using microsatellite markers.

We thank you for your support and hope to be of service in the future.

1 = Bontebok – 100% pure bontebok as determined by the nuclear test, using microsatellite markers and incorporating a 90% threshold.

2 = Hybrid – animals below the threshold for bontebok DNA. These animals pose a high risk to the pure bontebok population.

3 = Blesbok – 100% pure blesbok as determined by the nuclear test, using microsatellite markers.

Yours sincerely

Dr. Bruns
