- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

This is to certify that we have granted permission to Tony Boles to hunt one Bontebok ram on Wildschutzberg Game Reserve in the Eastern Cape.

It is a private herd which was started from stock purchased in 2006. These Bontebok were inspected on 3 April 2006 and certified "pure". Only pure Bontebok genetics are introduced onto the property. We have done DNA tests on the herd from time to time and have always found them to be pure Bontebok.

The ram was a lone bachelor and its removal would not impact negatively on the rest of the herd.

Surveys within South Africa's Private Sector shows an estimated number of over 7000 Bontebok in the country. Private Bontebok populations grow annually by 25,2% despite of annual hunting of 3,1%. Trophy hunting is crucial for the survival of this specie.

Herewith are the results of the 74 samples received for genetic testing of bontebok to detect hybrid animals. According to the DNA marker set typed, as compiled through research for the detection of possible hybrid animals the following results were obtained from an assignment test for bontebok and blesbok:

- ¹ = Bontebok – 100% pure bontebok as determined by the nuclear test, using microsatellite markers and incorporating a 90% threshold.
- ² = Hybrid – animals below the threshold for bontebok DNA. These animals pose a high risk to the pure bontebok population.
- ³ = Blesbok – 100% pure blesbok as determined by the nuclear test, using microsatellite markers.

We thank you for your support and hope to be of service in the future.
