CAUTIONARY STATEMENTS

PEA Cautionary Note

Readers are cautioned that the PEA is preliminary in nature; it includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the PEA results will be realized. Mineral resources that are not mineral reserves do not have demonstrated economic viability. Additional work is needed to upgrade these mineral resources to mineral reserves.

Forward-Looking Statements

This presentation contains “forward-looking” statements and information relating to the Company, Macpass and Mactung Projects that are based on the beliefs of Company management, as well as assumptions made by and information currently available to Company management. Such statements reflect the current risks, uncertainties and assumptions related to certain factors, including but not limited to, without limitations, exploration and development risks, expenditure and financing requirements, general economic conditions, changes in financial markets, the ability to properly and efficiently staff the Company's operations, the sufficiency of working capital and funding for continued operations, title matters, First Nations relations, operating hazards, political and economic factors, competitive factors, metal prices, relationships with vendors and strategic partners, governmental regulations and oversight, permitting, seasonality and weather, technological change, industry practices, and one-time events. Additional risks are set out in the Company's prospectus dated May 9, 2017, and filed under the Company's profile on SEDAR+ at www.sedarplus.ca. Should any one or more risks or uncertainties materialize or change, or should any underlying assumptions prove incorrect, actual results and forward-looking statements may vary materially from those described herein. The Company does not undertake to update forward-looking statements or forward-looking information, except as required by law.

NI 43-101 Qualified Person

Brandon Macdonald P.Geo., CEO and Director of Fireweed Metals and a Qualified Person under the meaning of Canadian National Instrument 43-101, is responsible for the technical information in this presentation. Leon McGarry, P.Geo., Senior Resource Geologist for CSA Global Canada Geosciences Ltd. is independent of Fireweed Metals, and a 'Qualified Person' as defined under Canadian NI 43-101. Mr. McGarry is responsible for the Mineral Resource Estimate for the Macpass Project and directly related information in this presentation. Michael Makarenko, P.Eng., Project Manager for JDS Energy and Mining, Inc., is independent of Fireweed Metals, and a 'Qualified Person' as defined under Canadian NI 43-101. Mr. Makarenko is responsible for the PEA results for the Macpass Project and directly related information in this presentation. Garth Kirkham, P.Geo., of Kirkham Geosystems Ltd. is independent of Fireweed Metals and a 'Qualified Person' as defined under Canadian NI 43-101. Mr. Kirkham is responsible for the Mineral Resource Estimate for the Mactung Project and directly related information in this presentation.

Why Critical Metals? Why Fireweed?

We're leveraging our local and regional knowledge to create a new world-class critical metals district in Yukon, Canada

Coming Bull Market

Chronic underinvestment and protracted bear market has left cupboard bare

Massive Global Stimulus

Fiscal stimulus will focus on infrastructure, bullish for zinc

Best-in-Class Projects

Macpass and Mactung have the grade, scale, economics and upside potential

Strong Backers, Cashed Up

Teck, Lundins, others have invested, projects getting recognition they deserve

Critical Metals Essential

Geopolitical conflict and resource nationalism are fueling Western critical metals focus

Catalysts Coming

2023 drill results, resource update, and economic studies, all due in next few months

CRITICAL METALS FOR GENERATIONS

Zinc's unique properties make it an essential metal for everyday life. Zinc plays a crucial role in:

- Renewable Energy
- Healthcare
- Transportation
- Infrastructure
- Food Security
- Industrial Applications
- Energy Storage
- Electronics

Tungsten is an extremely versatile metal, essential for industrial applications in the following sectors :

- Automotive parts
- Aerospace & Defense
- Industrial machinery
- Drilling
- Boring and cutting equipment
- Logging and mining
- Electrical and electronics appliances

PROJECT HIGHLIGHTS

MP

MACPASS PROJECT

- One of the world's largest high-grade undeveloped zinc projects*
- Newly discovered Boundary zone delivering best-in-class drill results
- Assays pending, resource update including Boundary inaugural resource due in Q2 2024

MT

MACTUNG PROJECT

- World's largest high-grade tungsten deposit**
- Environmental Assessment complete, clear path to production
- Ongoing project optimizations , explore government support for critical metals projects
- PEA due Q2 2024

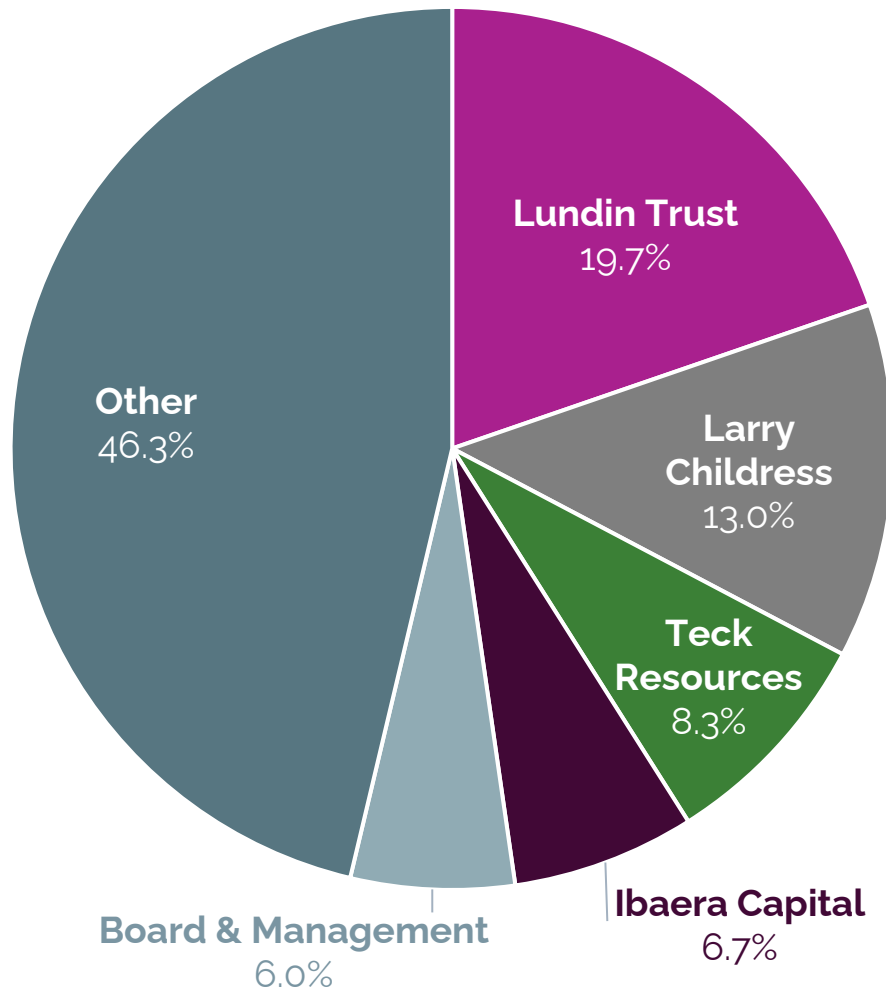

GP

GAYNA PROJECT

- Exceptional exploration potential for zinc, germanium, gallium, lead, and silver
- Transformational new deposit model supported by geophysics ready for drill testing
- Acquired via low-cost staking, high potential for new discoveries

CAPITAL STRUCTURE

As of February 7, 2024

Shares Outstanding	145,838,001

PROJECT LOCATIONS & EXISTING INFRASTRUCTURE

Macpass (Zn-Pb-Ag) & Mactung (W) Projects

>950 km² land package

Projects are accessible via road and existing airstrip at site

Deep-sea port with access to Asia

Alaska

Dawson

Mayo

Yukon

Ross River

Whitehorse

Skagway

Watson Lake

British Columbia

Dawson Creek

Gayna (Zn-Pb-Ag) Project

New zinc exploration project with intriguing potential and significant mineralization

Railhead

Trail Smelter

Northwest Territories

PROGRESS & CATALYSTS

COMPLETED 2023

- +\$50M raised
- Acquisition of Mactung finalized
- Updated resource for Mactung
- Largest drill campaign at Macpass with >22,500 m
- Expanded Boundary Zone
- Expanded camp and facilities, increasing operational capacity and operating window
- Gayna ground and geophysical validation and drill target generation

UPCOMING 2024

- Updated Macpass Mineral Resource Estimate
- Mactung PEA
- 2024 program in the planning stage for Macpass, Mactung and Gayna, which may include:
 - Step-outs at Tom, Jason and Boundary Zone
 - Generative work across the Macpass property
 - Potential drill program at Gayna

Macpass Project

Overview

We respectfully acknowledge that the Macpass Project is located on the Traditional Territories of the Kaska Dena Nation and the First Nation of Na-Cho Nyäk Dun.

ONE OF THE WORLD'S LARGEST UNDEVELOPED ZINC PROJECTS

- Host to multiple **zinc-lead-silver** deposits within a 940 km² land package
- Accessible via the North Canal Road and the Macmillan Pass aerodrome, ~250 km from Ross River

Macpass 2018 Resource Estimate					
	Tonnage (Mt)	Zn	Pb	Ag (g/t)	ZnEq ¹
Indicated	11.2	6.59%	2.48%	21.33	9.61%
Inferred	39.5	5.84%	3.14%	38.15	10%
2018 Preliminary Economic Assessment*					
Life of Mine (LOM)					18 years
LOM Tonnage					32.7 Mt
LOM Production (Zn/ZnEq) ¹					2.887 / 4.729 Mlb
Initial CAPEX					C\$404M
After-Tax NPV _{8%} ¹					C\$448M
After-Tax IRR ¹					24%

+ 6 Years Drilling

- Additional drilling at **Tom & Jason** will both **expand resource** and **improve grades** in some zones
- **Boundary Zone** inaugural resource expected in spring 2024
- **Additional engineering** to improve pits, metallurgy and optimize mine plan
- **Government \$71M funding** commitment to access roads, included as project CAPEX in 2018 PEA, now offset

Updated **Resource Statement** and new **Economic Studies** will reflect these improvements, and add to an already **World-Class Resource and Robust Mine Plan**

¹ Based on 2018 PEA commodity price assumptions (base case): US\$1.21/lb, Zn, US\$0.98/lb Pb, US\$16.80/oz Ag.

*Based on review of undeveloped zinc projects in the Standard & Poor's Global Market Intelligence Capital IQ database. Technical information in this disclosure has been approved by Fireweed Metals' VP Geology, Jack Milton, Ph.D., P.Geo. (BC), a 'Qualified Person' as defined under Canadian National Instrument 43-101.

**Boundary
Zone**

Boundary Zone

**Boundary
Main Fault**

**Boundary
Ramp
Fault**

**Hess
Fault**

WHY IS BOUNDARY ZONE SIGNIFICANT?

Robust potential for both **scale** and **grade** derived from stockwork/brecciated mineralization + high-grade massive sulphide stratiform layers

Scale

NB19-002: 230 m of 4.51% Zn from surface, including 100 m of 8.73% Zn, with 6.4m of 43.5% Zn

NB20-002: 213 m of 4.42% Zn, including 25.58% Zn over 5.81 m

NB21-002: 32.99 m of 9.91% Zn and 10.42 m of 23.77% Zn

High Grade

NB22-002: 124.5 m of 12.3% Zn, 1.3% Pb, 45.9 g/t Ag, including 60 m of 19% Zn, 1.6% Pb, 64.7 g/t Ag

NB23-007: **Upper zone** of 82.5 m grading 11.9% Zn, 2.2% Pb and 81.2 g/t Ag + **Lower zone** of 118 m grading 15.1% Zn, 2.8% Pb, and 85.8 g/t Ag

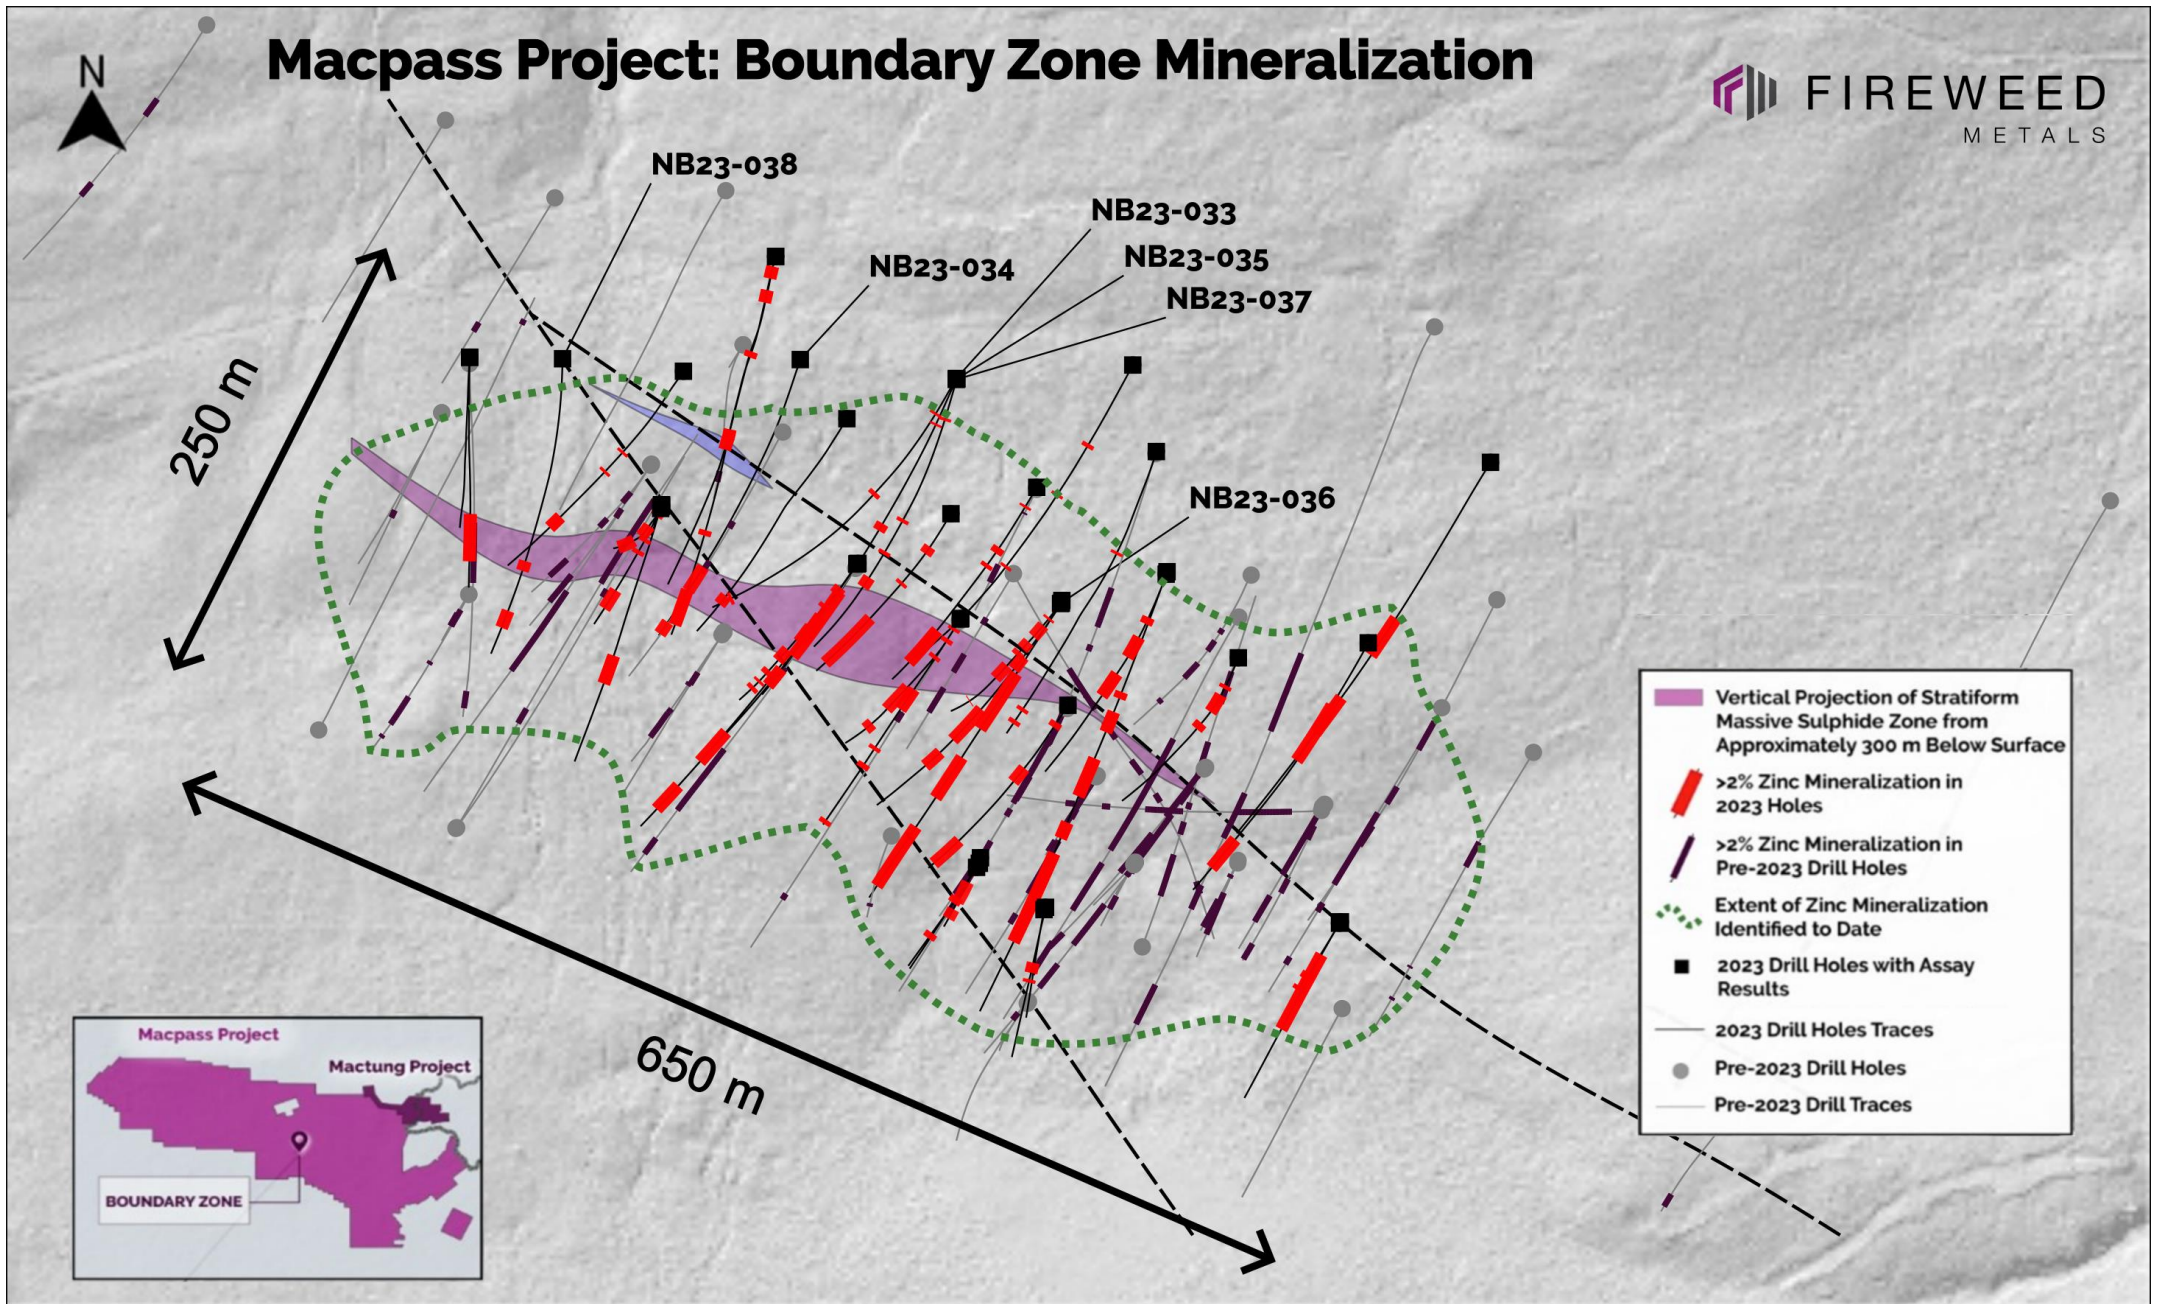

NB23-028: Upper zone of 66.11 m grading 7.13% Zn, 0.97% Pb, and 54.8 g/t Ag + Lower zone of 143.95 m grading 14.45% Zn, 1.15% Pb, and 60.0 g/t Ag

NB23-036: 45.22 m of 18.98% Zn, 2.24% Pb, and 114.9 g/t Ag, including 39.22 m of 20.84% Zn, 2.48% Pb, and 115.4 g/t Ag

NB23-037: 118.36 m of 11.58% Zn, 1.75% Pb, and 54.9 g/t Ag, including 27.63 m of 19.06% Zn, 0.74% Pb, and 58.2 g/t Ag

Macpass Project: Boundary Zone Mineralization

DRILLING HIGHLIGHTS

2023 Drilling Program

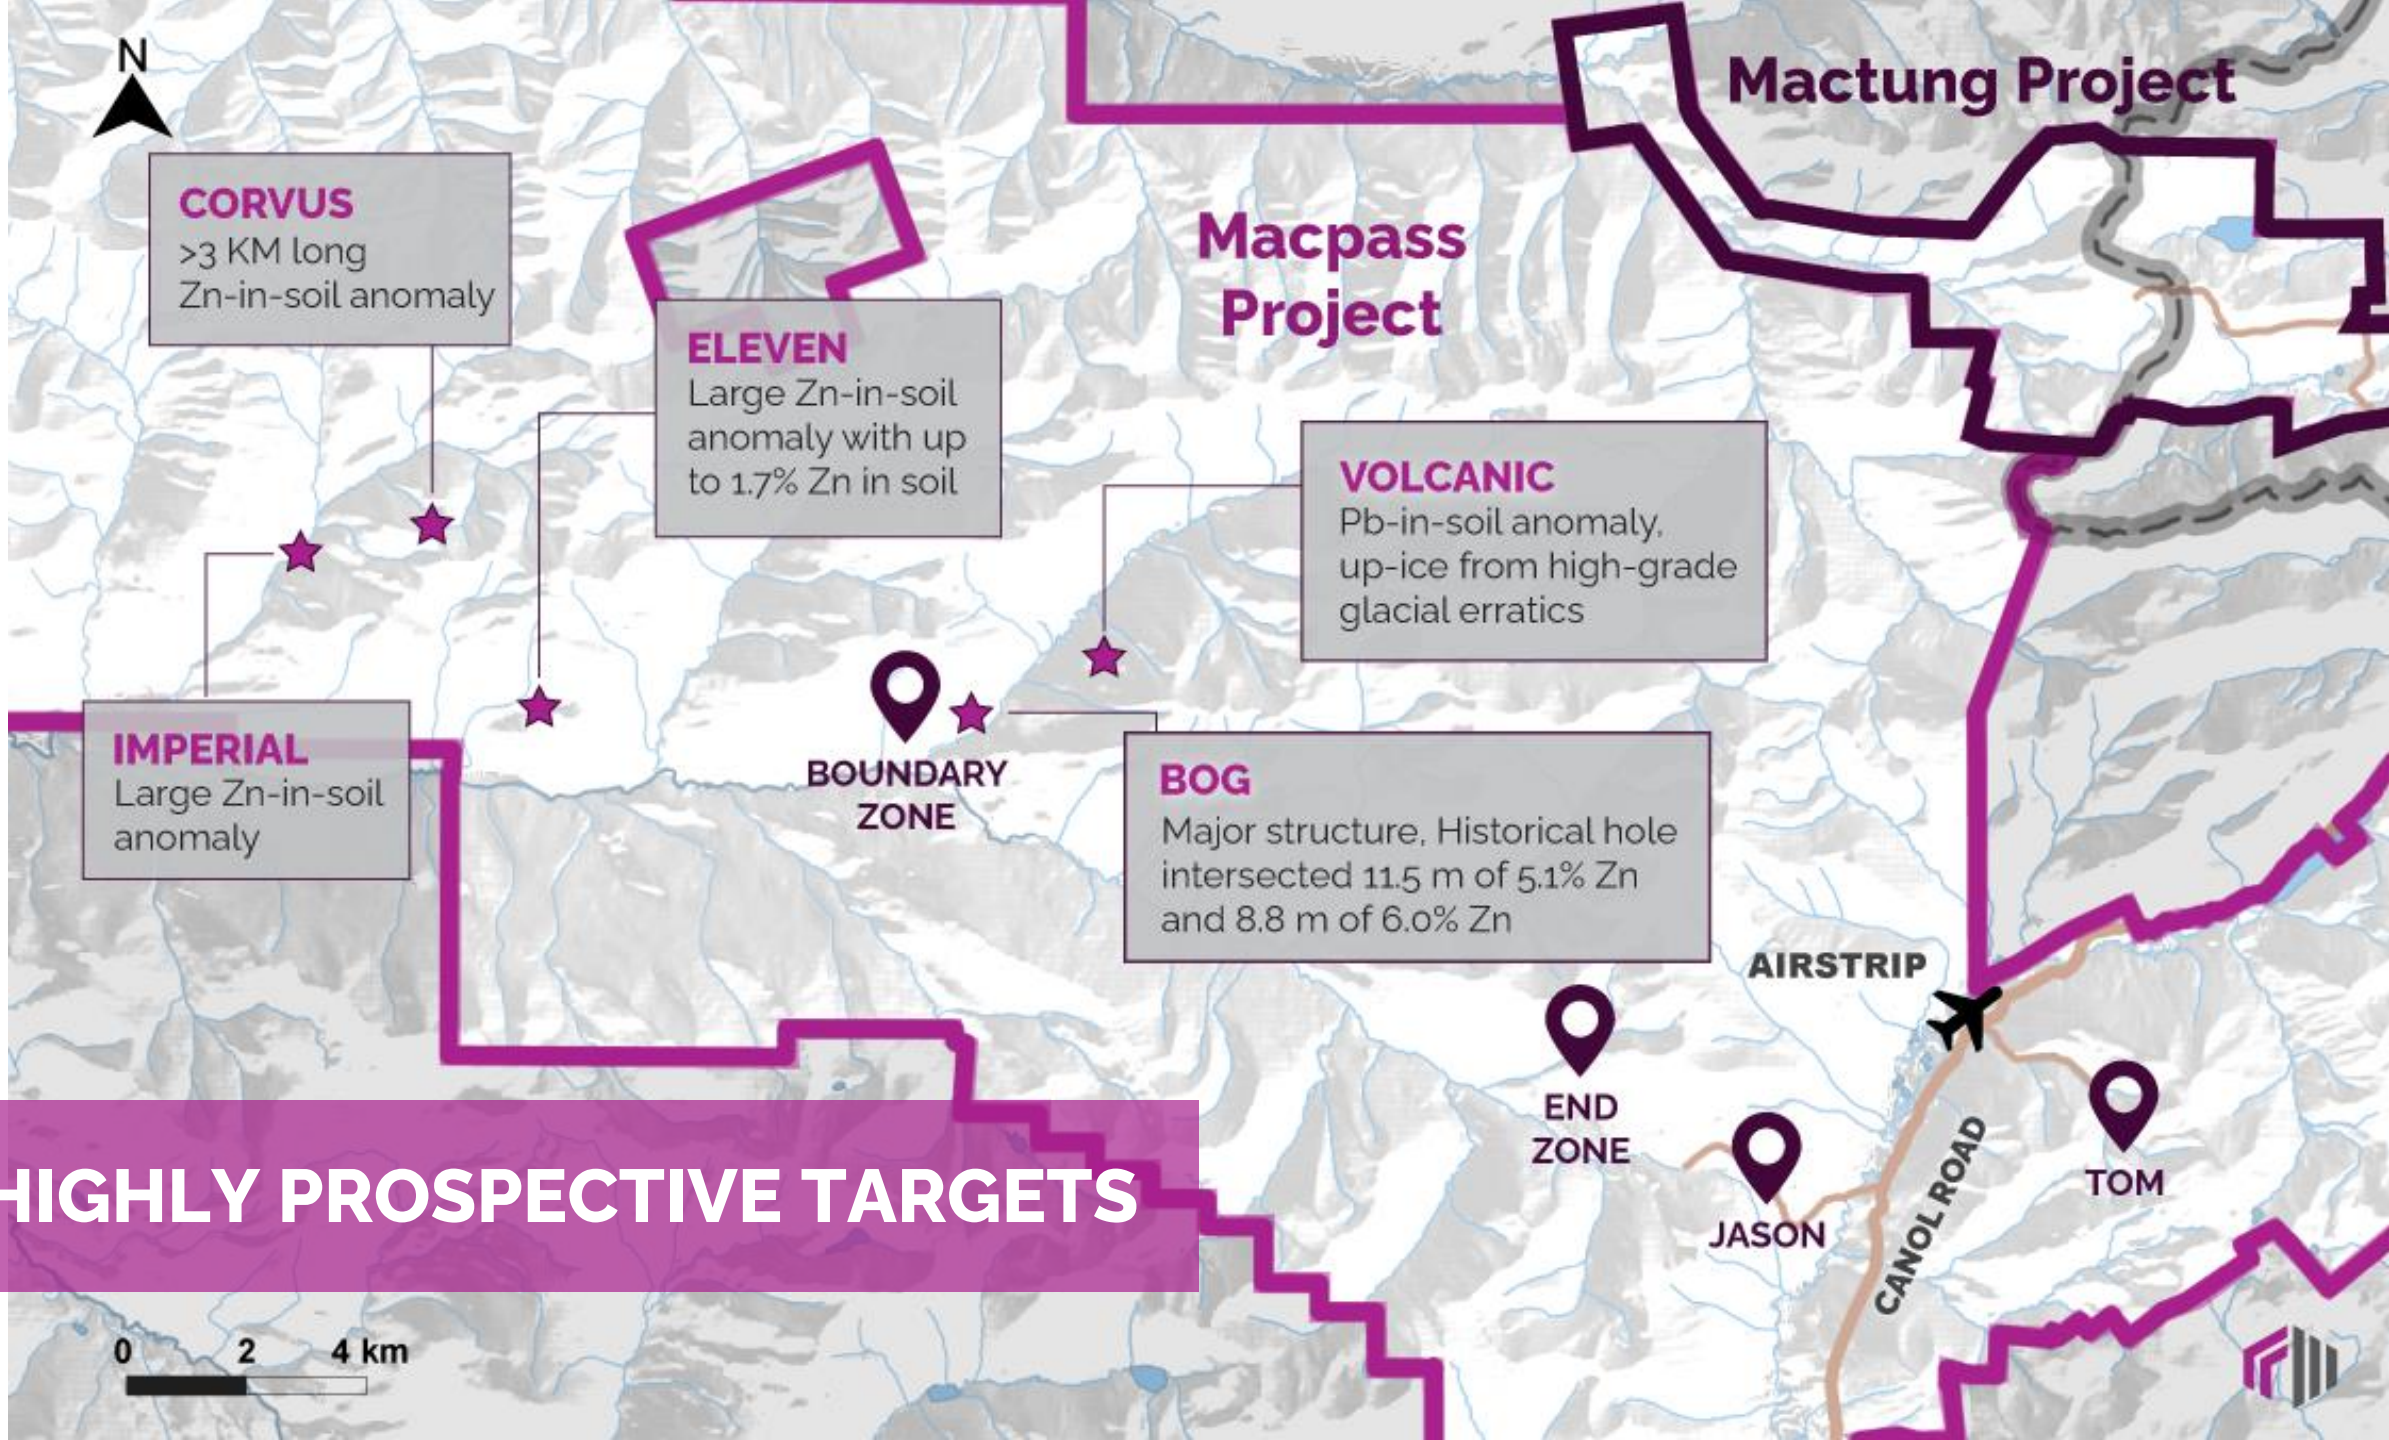

2023 program achieved 22,500 m of drilling mostly focused on Boundary, Tom, and Jason zones, with step-out holes at Boundary Zone, Tom South and Jason South

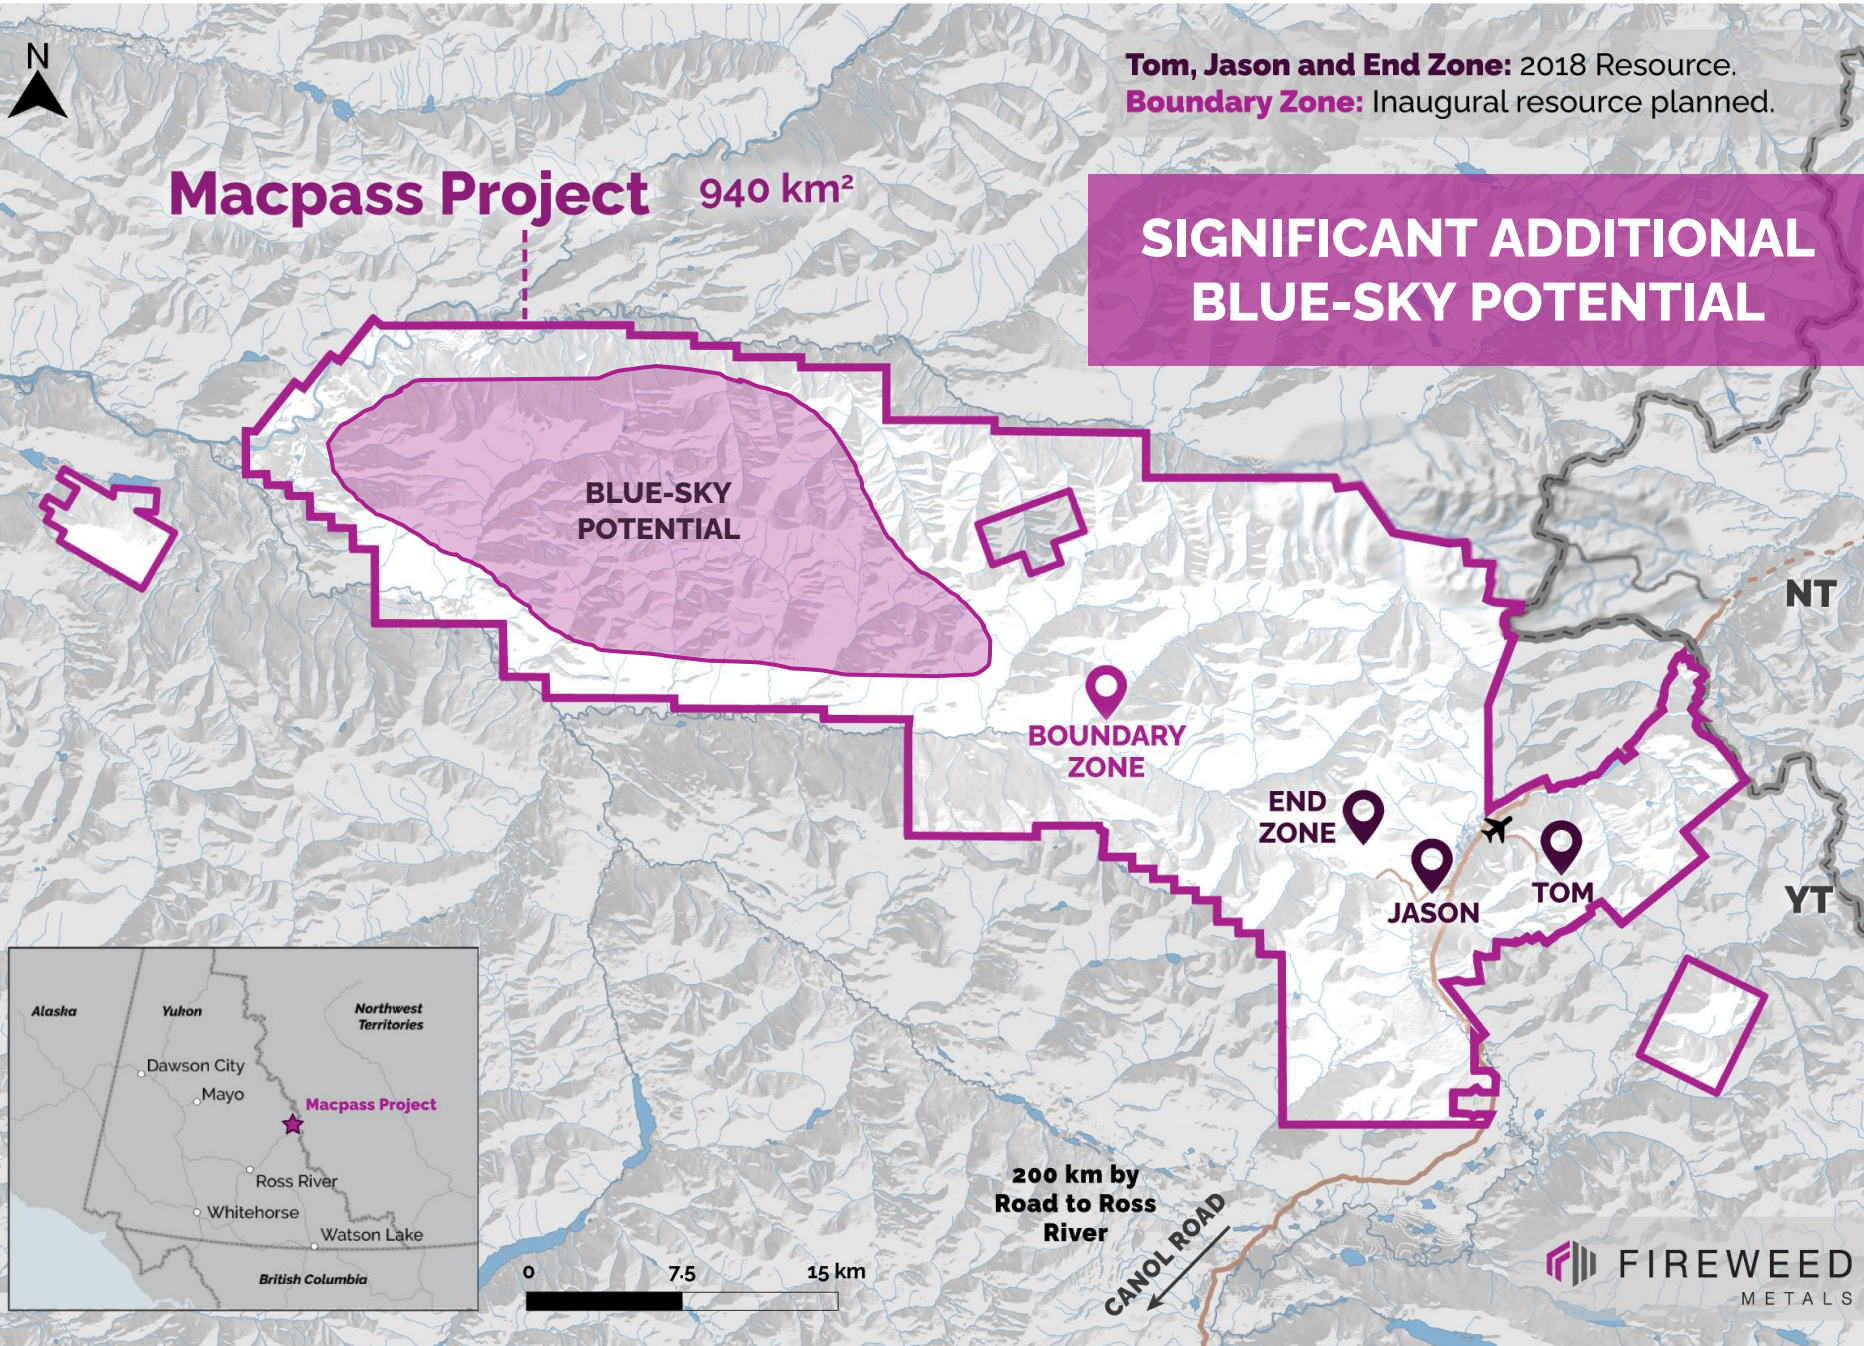

Boundary

- In 2023, zinc mineralization was hit in all completed holes, connecting Boundary Main and Boundary West with a high-grade feeder zone.
- The Boundary Zone stratiform mineralization has a strike length of over 550 m and has been followed down-dip for at least 400 m.
- From near surface to a depth of at least 400 m, broadly disseminated vein and breccia mineralization exists in a diffuse halo around the stratiform mineralization with a strike of at least 650 m and a width of at least 250 m. These veins and breccias represent a bulk-tonnage style target that is conducive to an open-pit extraction scenario.

Tom & Jason

- Intersected mineralization in all completed drill holes at Tom with the objective of resource expansion.
- Discovery of Tom South, an extension of mineralization that may connect Tom West and Southeast and remains open down-plunge.
- Intersected mineralization in both holes at Jason South with the goal of resource expansion.

Aerodrome

North Canol Road

Mactung Project

Overview

We respectfully acknowledge that the Mactung Project is located on the Traditional Territories of the Kaska Dena Nation and the First Nation of Na-Cho Nyäk Dun, and the Sahtu Settlement Area.

THE WORLD'S LARGEST HIGH-GRADE TUNGSTEN DEPOSIT

- Host to a large **tungsten** deposit within a 38 km² area, 100% owned by Fireweed
- Adjacent to Macpass, and access via the North Canol Road and the Macmillan Pass aerodrome
- Extensive drilling, engineering, metallurgy, geotechnical, and environmental studies were undertaken in support of a Feasibility Study (2009)
- Environmental Assessment completed, predictable licensing and pathway to construction

Mactung 2023 Resource Estimate

	Tonnage (Mt)	WO ₃ Grade (%)	Contained WO ₃ (mtu ⁵)
Indicated (underground)	12.17	1.05%	12,789,000
Indicated (open pit)	29.32	0.59%	17,367,000
Total Indicated (UG+OP)	41.49	0.73%	30,156,000
Inferred (underground)	2.82	0.73%	2,066,000
Inferred (open pit)	9.43	0.55%	5,139,000
Total Inferred (UG+OP)	12.25	0.59%	7,205,000

FIREWEED METALS

WHY MACTUNG?

CRITICAL METAL

The U.S., Canada and the EU have designated tungsten a critical metal. It has extreme physical characteristics necessary for many industries.

CHINA MARKET DOMINATION

China controls most of the world's tungsten deposits and production, creating risks to the west in an uncertain future.

CHANGING WORLD

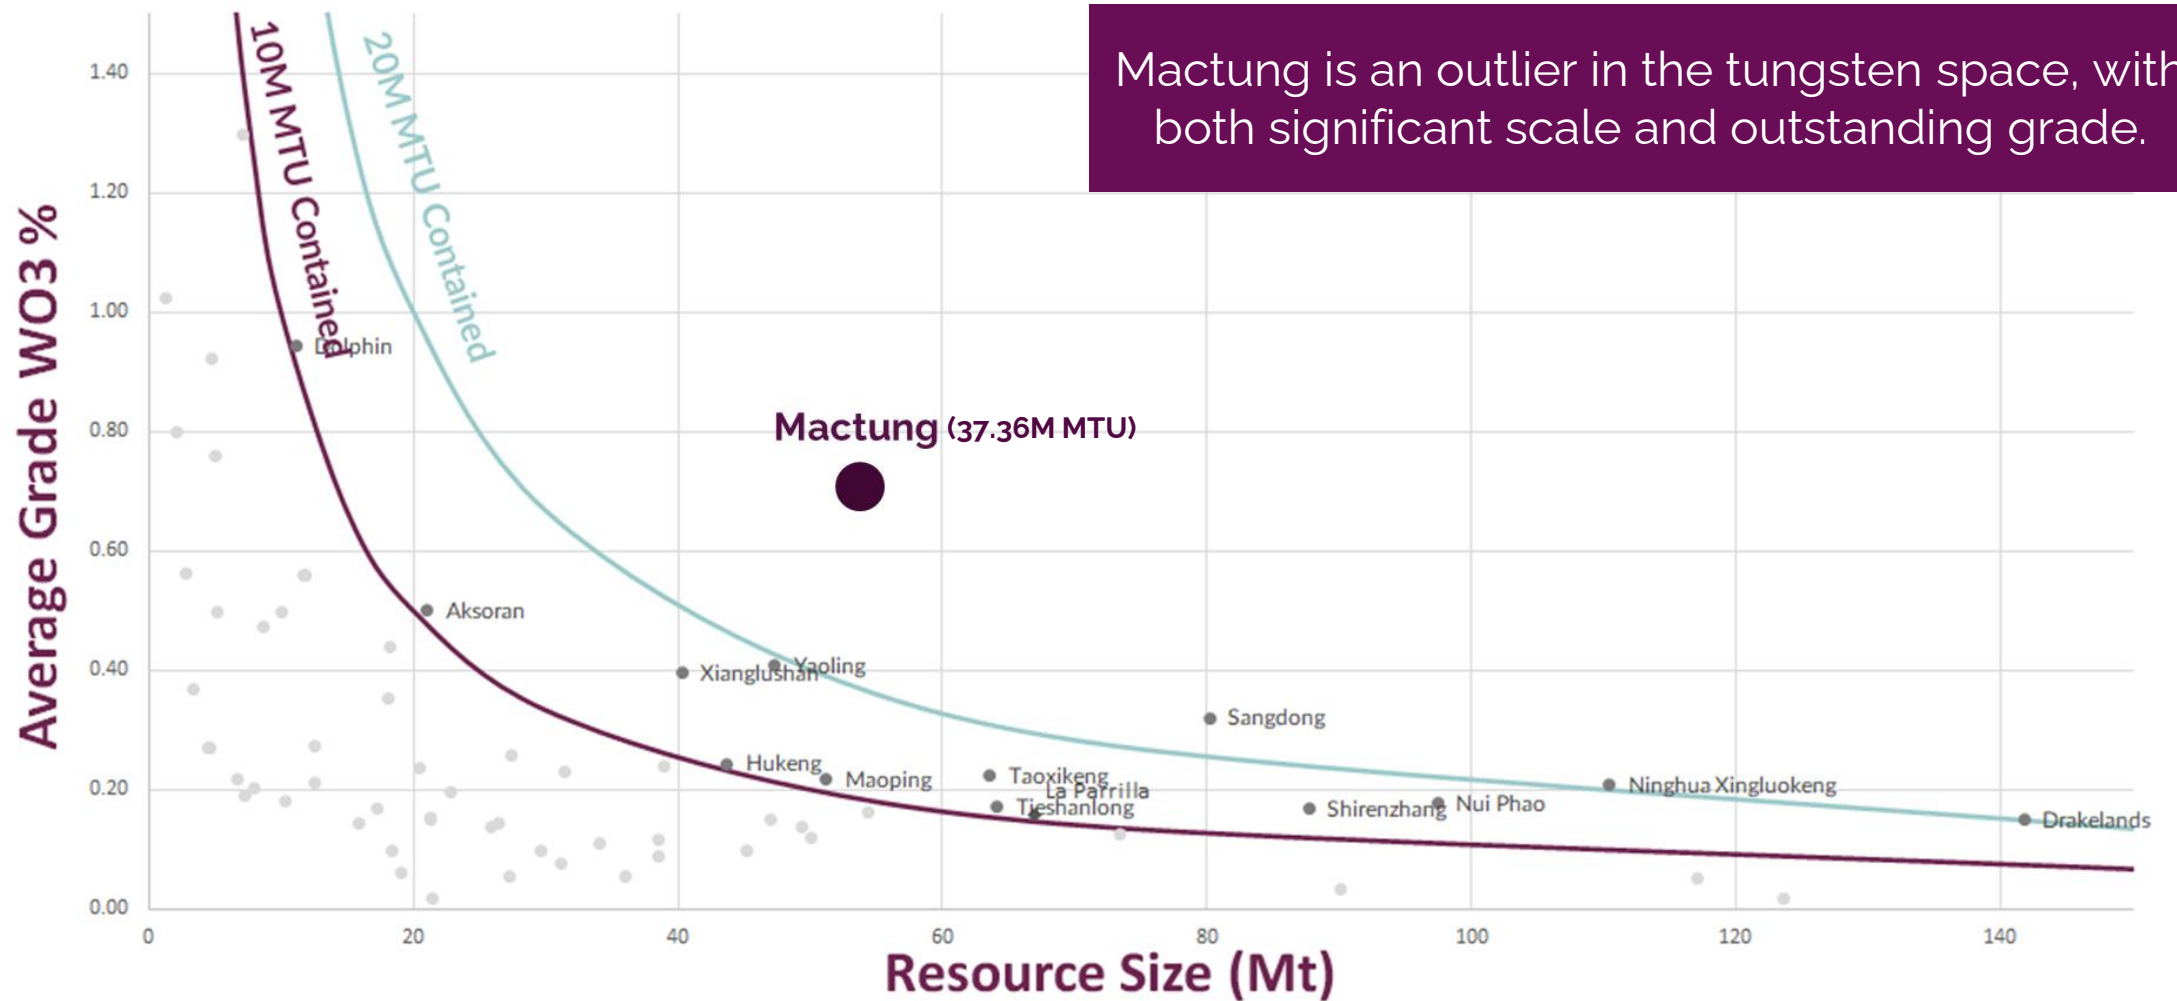

Recent world events have sharpened the focus of western governments on critical metals, creating an opportunity to establish a reliable western source of tungsten.

W

Tungsten

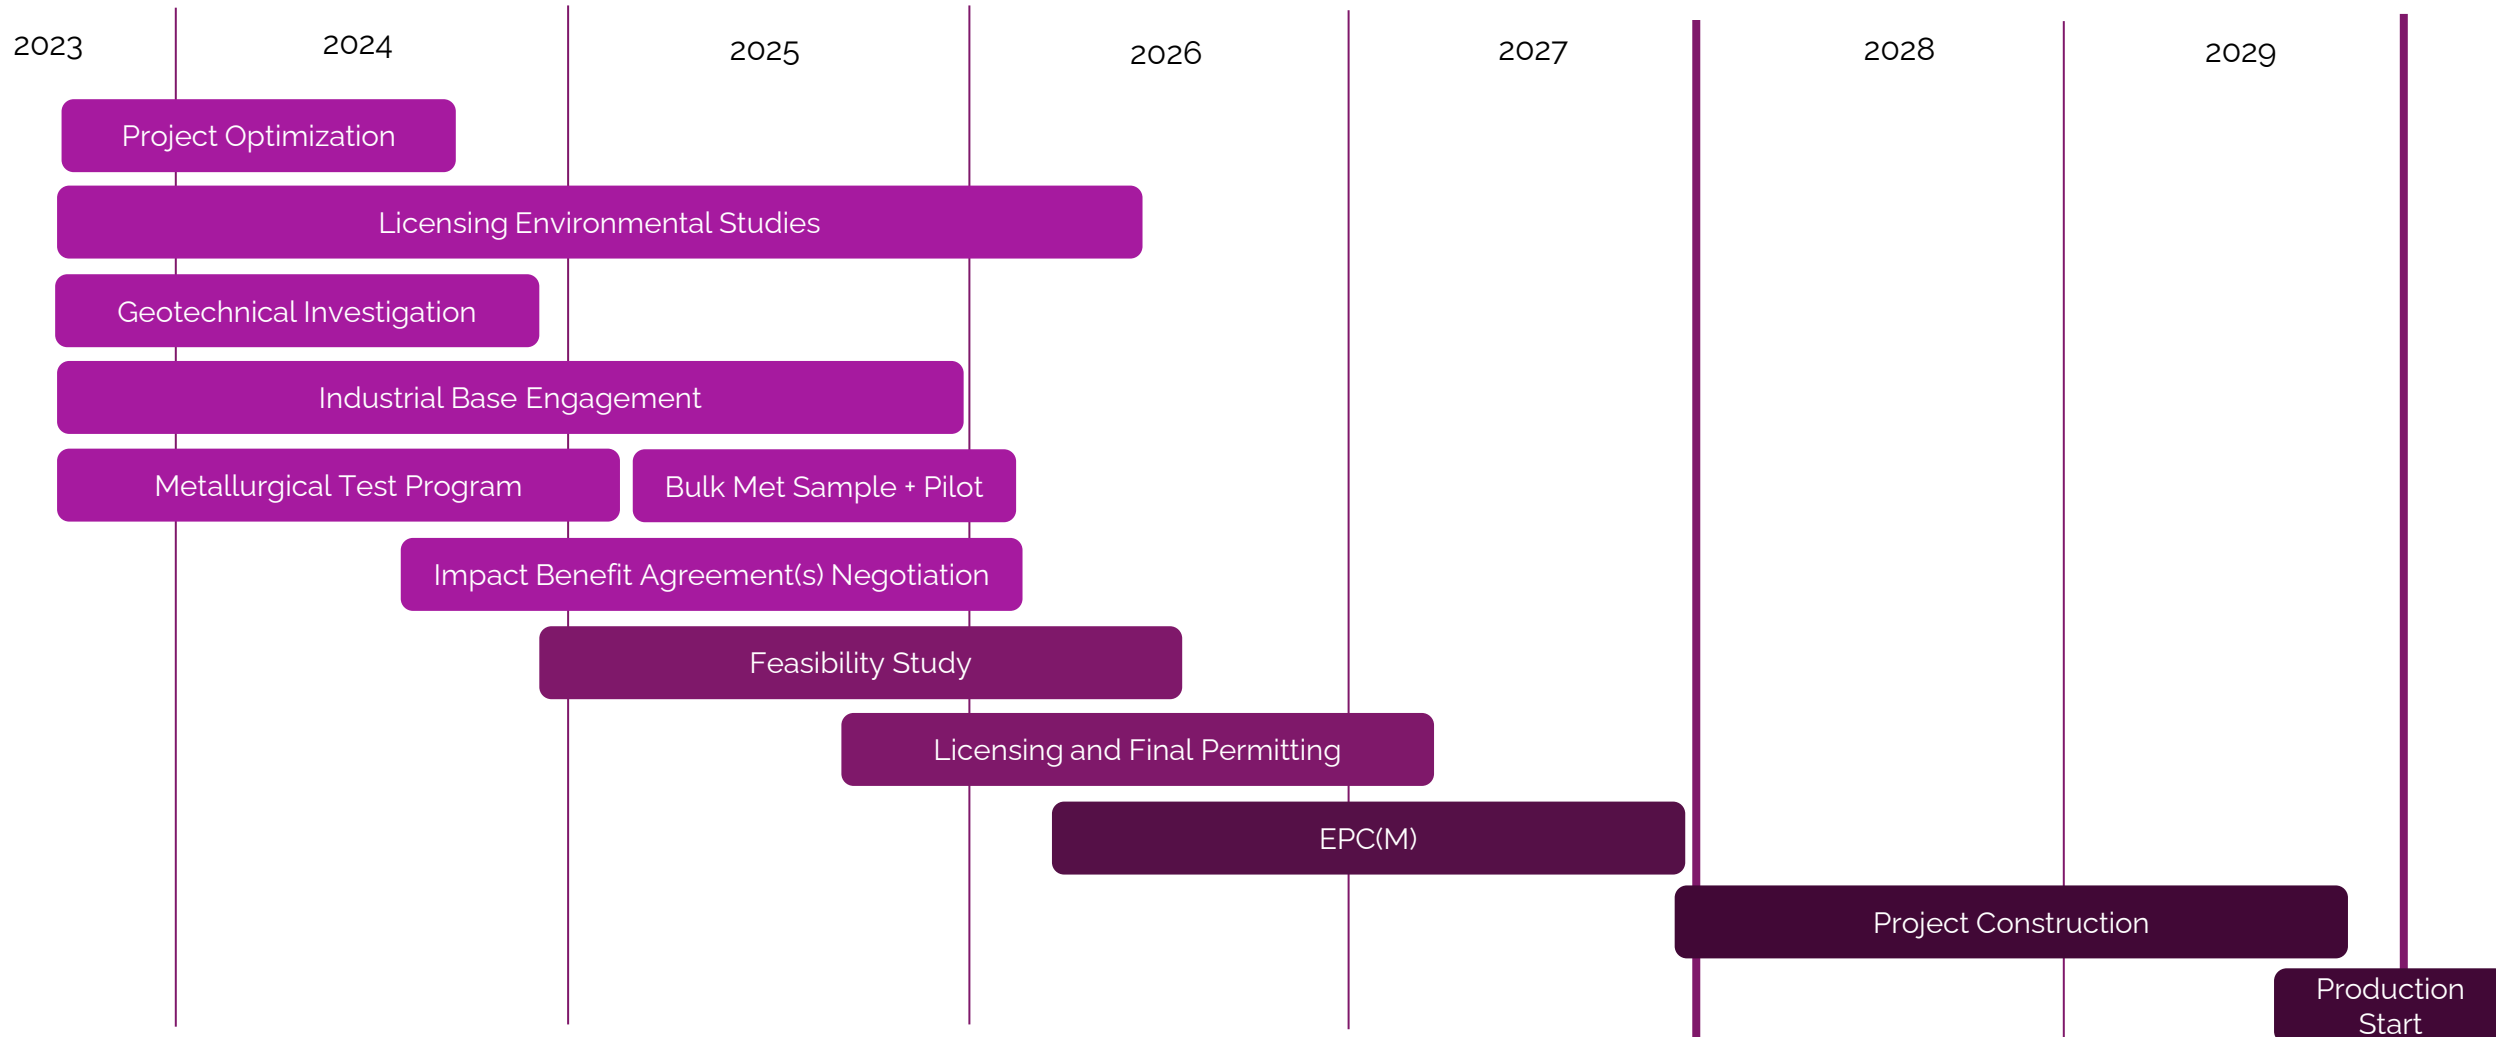

MACTUNG STANDS OUT

Mactung is an outlier in the tungsten space, with both significant scale and outstanding grade.

Qualified Person Statement Technical information in this document has been approved by Fireweed's VP Geology, Dr. Jack Milton, P. Geo. (BC), a 'Qualified Person' as defined under Canadian National Instrument 43-101. **Footnotes and References:** References to relative size and grade of the Mactung resource in comparison to other tungsten deposits in the world are based on review of the Standard & Poor's Global Market Intelligence Capital IQ database. 1: For details, see <https://www.sedarplus.ca/> Fireweed Technical Report titled "NI 43-101 Technical Report, Mactung Project, Yukon Territory, Canada" filed July 28, 2023, and Fireweed News Release dated June 13, 2023.

MACTUNG HAS A CLEAR PATHWAY TO PRODUCTION

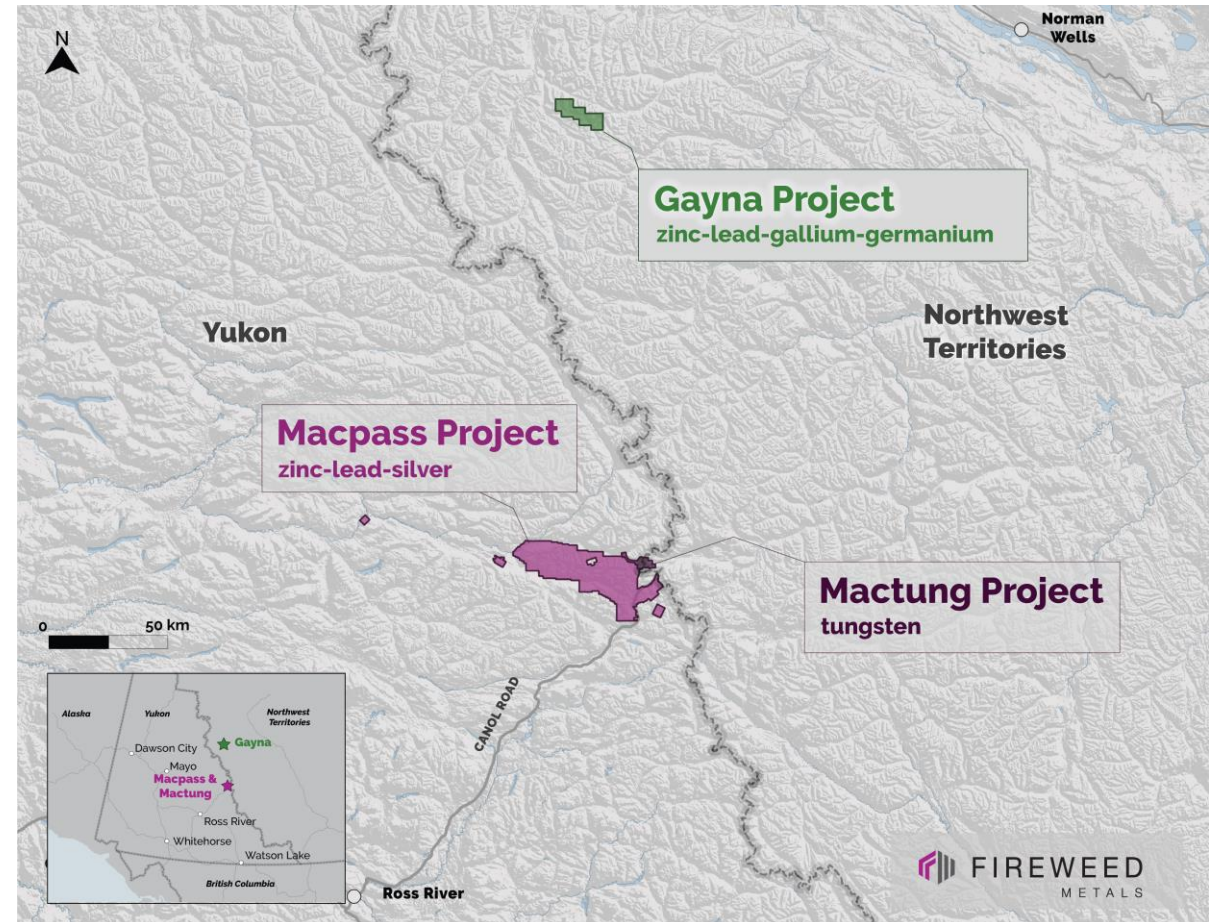

Gayna Project

Overview

We respectfully acknowledge that the Gayna Project is located within Settlement Areas of Sahtu and Gwich'in, and the Traditional Territory of First Nation of Na-Cho Nyäk Dun.

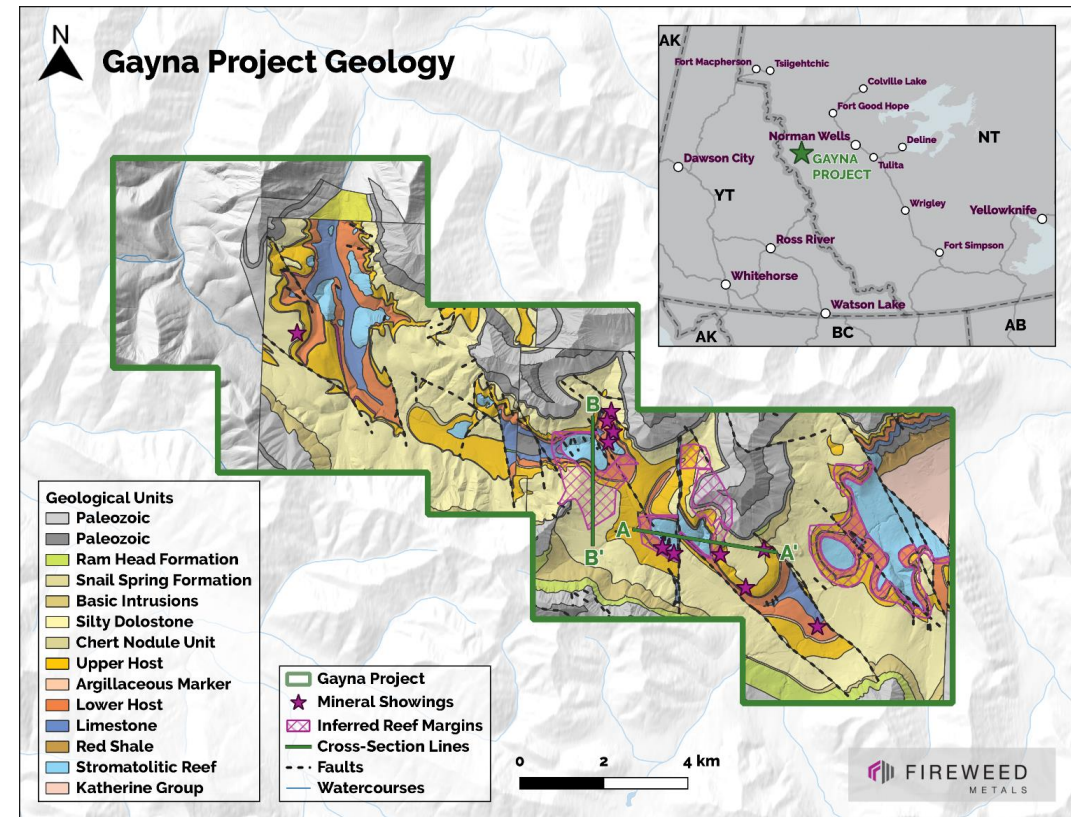

GREAT EXPLORATION POTENTIAL FOR ZINC, GERMANIUM, GALLIUM, LEAD, AND SILVER

- Located 180 km north of Macpass, in the Mackenzie Mountains, NWT
- Rio Tinto drilled 28,000 m in the 1970s. Claims ultimately lapsed
- New interpretation establishes Gayna's geological setting and mineralization as similar to that of a reef-style deposit, like Ivanhoe's high-grade Kipushi mine in DRC
- Fireweed acquired Gayna through staking a 128-sq-km area encompassing all historical showings and anomalies
- 2023 geophysical program identified two broad areas with gravity anomalies, while ground gravity survey highlighted multiple potential drill targets.

EXPLORATION UPDATE

- High-grade rock samples confirmed the presence of massive sulphide mineralization that also contains elevated gallium and germanium.
- Soil samples confirmed the presence of a strong, 4 km x 1 km, historical zinc and lead soil anomaly
- Results from two ground gravity surveys totaling ~100 line-km have highlighted multiple potential drill targets.
- Completion of a LiDAR topographic survey over the entire 128.75 km² property has generated accurate location data for future drilling and other exploration work.
- The 2022 geophysical program identified two broad areas with gravity anomalies consistent with Kipushi-style targets.
- The 2023 gravity survey expanded the gravity coverage to identify new anomalies, and to refine existing anomalies for future drill-testing.

BLUEPRINT FOR VALUE CREATION

FIREWEED METALS

- With best-in-class team and strong backers, Fireweed is poised to deliver shareholder value as we drive our critical metals projects forward during a catalyst-rich 2024.

MACPASS PROJECT

- Resource expansion, inaugural Boundary resource and government-funded road upgrades position Macpass in a class of its own among undeveloped zinc-lead-silver projects globally, with blue-sky potential including germanium / gallium.

MACTUNG PROJECT

- Updated environmental and economic studies, including PEA, and government backing for critical metals will drive value at Mactung.

GAYNA PROJECT

- Exciting discovery upside and further drill targeting at Gayna, a target-rich project that hosts Kipushi-style geology.

ABOUT FIREWEED METALS

Fireweed is a Canadian company with the mission to explore and develop critical mineral assets through progressive leadership, high standards, innovation, and collaborative partnerships for the benefit of present and future generations.

OUR VISION

Fireweed Metals will sustainably explore and develop critical minerals assets to support the transition to a low-carbon economy. We will focus on leading with integrity, striving for consistency in words and actions, being honest, transparent, and accountable, mitigating health and safety risks, and being progressive and innovative while promoting environmental and social stewardship.

We will act in a way that reflects our core value of respect, for both the environment in which we work and the people we work with. Our approach will foster meaningful relationships with employees and local communities, and will build trusted partnerships benefiting Indigenous peoples and shareholders.

OUR VALUES

RESPECT

For stakeholders
For Indigenous partners
For shareholders

INTEGRITY

Honesty, Transparency, Accountability

PARTNERSHIPS

Progressive, Environmental Stewardship, Social Stewardship, Value Creation

PEOPLE

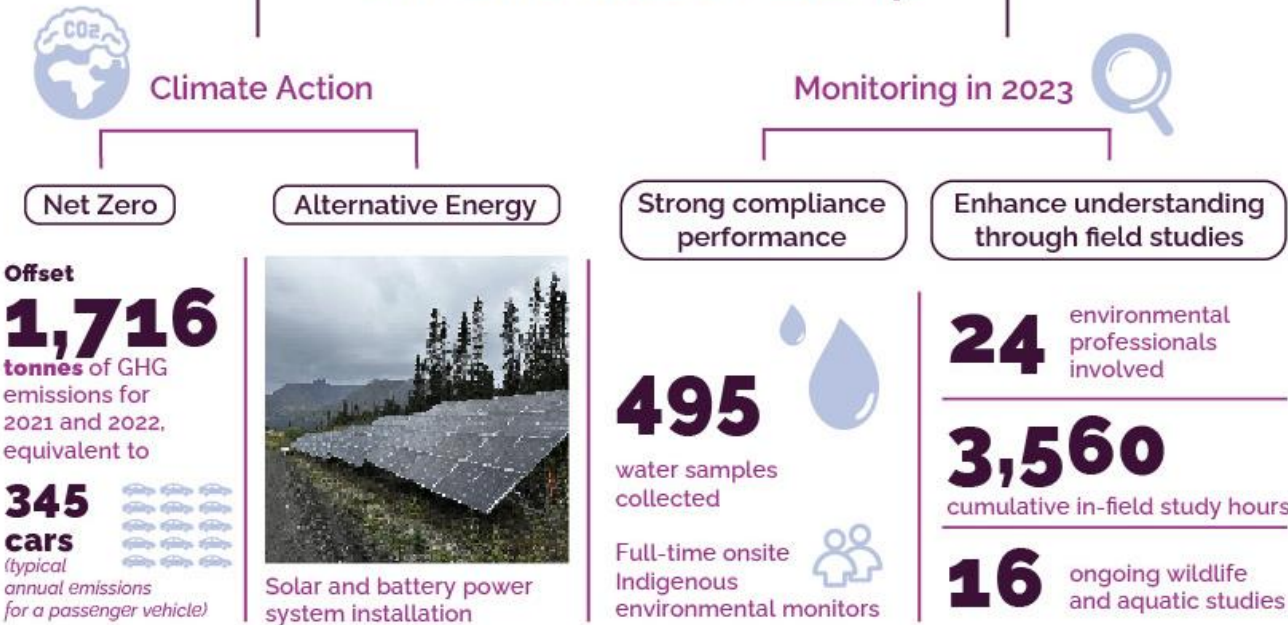

Inclusivity, Collaboration, Health & Safety

SUSTAINABILITY APPROACH

What does it mean to Fireweed?

Undertaking exploration and mine development activities that respect the environment, benefit local communities, and enhance project and investment certainty.

Environmental Stewardship

2023 Workplace Performance

Five Drill Program and Field Studies:

21

Number of All-personnel "Safety Sunday" Meetings

880

Field-level Risk Assessments

ZERO

Lost Time Injuries

308 people employed

127,000

people hours on site, >50% with Yukoners

130 truck trips delivering goods primarily from Yukon suppliers

~50%

of field program expenditures with Indigenous-affiliated businesses

Workplace Diversity

Why Zinc?

Uses & Applications*

Zinc's unique properties make it an extremely versatile metal, essential for everyday life. Zinc plays a crucial role in:

*Source: Government of Canada, "Zinc facts", 2021

Zinc Supply

Worldwide Zinc Mine Production in 2022 (kt)*

China is the largest zinc producer, with

33%
of the world's zinc production in 2022.

*Source: U.S. Geological Survey, "Mineral Commodity Summaries", 2023

Why Tungsten?

Uses & Applications

Tungsten's unique properties make it excellent for industrial applications in the following sectors:

By application:

- Tungsten carbide
- Tungsten alloys & mill products

- Automotive parts
- Aerospace & Defense
- Industrial machinery
- Drilling
- Boring and cutting equipment
- Logging & Mining
- Electrical & electronics appliances

Scheelite (CaWO₄) mineral ore is the preferred source of tungsten

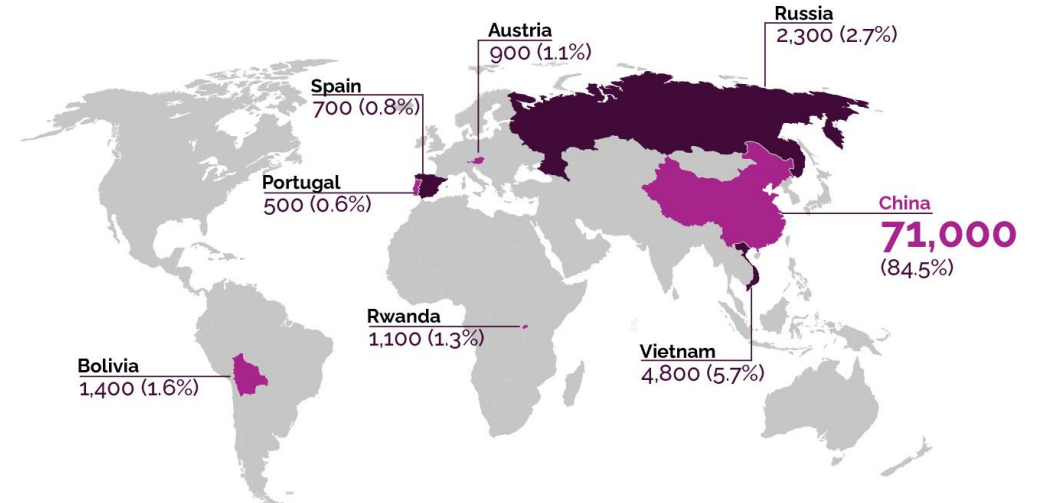

Tungsten Supply

Global production of tungsten in 2022, by country (tonnes)*

China is the world's largest tungsten producer and exporter, with

84.5%

of the world's tungsten in 2022.

Critical Metal

Tungsten is a critical metal as now listed by Canada, the USA, and the EU, with extreme physical characteristics necessary for many industries.

China Market Domination

China controls both the resource and production side of the Tungsten market, creating risks to the west in an uncertain future.

Changing World

Recent world events have changed western government views on critical metals, creating an opportunity to create a reliable western source of tungsten.

Leveraging Cutting Edge Technologies

- Automated core cutting to improve speed, efficiency, and reduce job hazard and fatigue
- Automated core scanning to improve data capture for future interpretation and validation
- Directional drilling techniques to improve drilling efficiency and accuracy
