CNS Pharmaceuticals Inc. Featured in Syndicated Broadcast Covering Activation of First Clinical Trial Sites in Europe Evaluating Berubicin for the Treatment of GBM

LOS ANGELES, Oct. 07, 2022 (GLOBE NEWSWIRE) -- [InvestorWire](#) -- [CNS Pharmaceuticals Inc. \(NASDAQ: CNSP\)](#), a clinical stage biotechnology company specializing in the development of novel treatments for primary and metastatic cancers of the brain and central nervous system, today announces that it has been featured in a broadcast via NetworkNewsAudio ("NNA"), a solution that delivers additional visibility, recognition and brand awareness in the investment community via distribution to thousands of syndication points. The audio news release covers CNS Pharmaceuticals' recent announcement highlighting the activation of its first clinical trial sites in Europe for the ongoing potentially pivotal global trial evaluating Berubicin for the treatment of recurrent glioblastoma multiforme (GBM), one of the most aggressive types of brain cancer.

"Our primary focus continues to be on advancing the clinical development of Berubicin as a potential treatment option for this devastating disease. Over the course of this year, we have worked diligently to expand patient eligibility for our potentially pivotal trial and bolster our international presence now realized with the activation of the first two European clinical trial sites," John Climaco, CEO of CNS Pharmaceuticals, stated in the news release. "This is a true testament to our team's commitment to and the execution of this important clinical program."

Berubicin is a novel anthracycline and the first anthracycline to appear to cross the blood-brain barrier. Berubicin is currently being evaluated in a potentially pivotal global study evaluating its efficacy and safety in the treatment of GBM. The potentially pivotal trial is an adaptive, multicenter, open-label, randomized and controlled study in adult patients with recurrent glioblastoma multiforme (WHO Grade IV1) after failure of standard first-line therapy. The primary endpoint of the study is Overall Survival (OS), which is a rigorous endpoint that the FDA has recognized as a basis for approval of oncology drugs when a statistically significant improvement can be shown relative to a randomized control arm. Results from the trial will compare Berubicin to a current standard of care (Lomustine), with a 2 to 1 randomization of patients to receive either Berubicin or Lomustine.

“We are grateful for the tremendous support from the clinical staff and remain dedicated to driving patient enrollment as quickly and efficiently as possible. We look forward to continuing to build momentum and bringing Berubicin across the finish line to unlock its greatest potential. As long as the unmet medical need in GBM remains, we will continue our fight in earnest to bring hope to patients and families globally,” Climaco added.

As detailed in the news release, the FDA has granted CNS Pharmaceuticals Fast Track Designation for Berubicin, which enables more frequent interactions with them to provide guidance on expediting the development and review process. Additionally, the company has also received Orphan Drug Designation from the FDA, which may provide seven years of marketing exclusivity upon approval of an NDA.

About CNS Pharmaceuticals Inc.

CNS Pharmaceuticals a clinical-stage pharmaceutical company developing a pipeline of anti-cancer drug candidates for the treatment of primary and metastatic cancers of the brain and central nervous system. The company's lead drug candidate, Berubicin, is a novel anthracycline and the first anthracycline to appear to cross the blood-brain barrier. Berubicin is currently in development for the treatment of a number of serious brain and CNS oncology indications including glioblastoma multiforme (GBM), an aggressive and incurable form of brain cancer.

Additionally, the company is advancing the development of its WP1244 drug technology portfolio, which utilizes anthracycline and distamycin-based scaffolds to create small molecule agents and is believed to be 500x more potent than daunorubicin in inhibiting tumor cell proliferation. Preclinical studies of WP1244 demonstrated high uptake in the brain with antitumor activity. CNS Pharmaceuticals is evaluating the use of WP1244 in the treatment of brain cancers, pancreatic, ovarian, and lymphomas.
