## QUARTERLY REPORT TO 30 SEPTEMBER 2024

Moho Resources Limited (ASX:MOH) ("Moho") ("the Company") reports on its activities for the quarter ended 30 September 2024.

### SUMMARY OF OPERATIONS

- Full-scale tenement soils sample survey over the Weld Range North Project was completed; assays are expected in the December 2024 quarter.
- Black Swan South Project to be evaluated for gold potential with a planned magnetic survey and a horizontal-to-vertical spectral ratio (HVSr) passive seismic survey.
- The Company continues to undertake strategic review processes designed to optimize the Company's portfolio and enhance returns for shareholders.
- Bryce Gould appointed as Non-Executive Director.

Aligned with its strategic goals, Moho conducted a thorough review of its current projects and continued to assess potential new acquisition opportunities during the quarter. This strategic review aims to strengthen the Company's balance sheet and optimize its portfolio by identifying new projects that have the potential to increase shareholder returns.

### **Weld Range North Project (E20/1012)**

The Weld Range North Project, located in the Youanmi Terrain, is a syncline of generally low-grade metamorphosed deformed mafic/ultramafic assemblages with intervening felsic volcanics, such as tuffs and schists. The project includes two distinct types of Archean terrain namely, the predominant Yilgarn cratonic granitoids and the northern edge of the Weld Range Greenstone Belt.

Large-scale mafic/ultramafic processes in the Meso to Neoproterozoic era of the Yilgarn Craton in Western Australia have long been recognized and form part of several Large Igneous Provinces (LIP) spanning 100 million years. The Youanmi Terrane, located in the western Yilgarn Craton, is distinctive because its greenstone belts contain a high proportion of intrusive mafic and ultramafic rocks. It is believed that the overlapping magnetic and gravity anomalies at Moho's Weld Range North Project are the geophysical indicators of one of these intrusions.

During the quarter, the Company announced the completion of a soil sample survey over the Weld Range North project. Assays are pending and expected to be received in December quarter.

This follows an initial orientation soil sample survey conducted in 2023, which identified elevated Ni levels in areas with a magnetic anomaly and a gravity bullseye anomaly. The follow-up survey, which involved 298 soil samples, aimed to further delineate the extent of mafic-ultramafic geochemistry signature over the magnetic and gravity anomalies and the remainder of the tenement. This survey also helped outline the different soil types across the tenement.

**Figure 3: Orientation Soil Sample Survey over Magnetic Anomaly**

**Figure 4: Orientation Soil Sample Survey over Gravity Bullseye Anomaly**

A detailed drone magnet survey and possibly a gravity survey are being planned for further exploration. Following heritage clearance, a preliminary aircore drilling program is being developed along with a Program of Works (PoW) application, this would aim to define the bedrock lithologies and potential locations for nickel-copper sulphide and gold mineralisation.

### **Black Swan South Project (E27/623)**

Moho is in the process of conducting a magnetic survey and a horizontal-to-vertical spectral ratio (HVSr) passive seismic survey to evaluate the tenement's potential for gold mineralization. Historically, the focus has been on nickel, resulting in no gold exploration within the Black Swan Project for the past 30 years. Recently, Poseidon (ASX: POS) has identified several gold anomalies in the southwestern corner of their Black Swan Project, which borders the northwestern corner of E27/623. This is detailed in Poseidon's ASX announcement dated September 24, 2024, titled "Gold Potential Builds at Black Swan."
