Hamee Corp. (Head Office: Odawara City, Kanagawa Prefecture, President and CEO: Ikuhiro Mizushima, Securities Code 3134:TSE Standard Market) announced that its recycling service for waste plastic, "ParallelPlastics", started custom-made production of accessory charms and glasses cords made of recycled plastics featuring beautiful patterns such as natural stones.

Strap made of recycled plastic charms.

Glasses cords made from recycled plastics

ParallelPlastics is a new energy-saving and cost-saving recycling service. This product is made into beautiful materials by mixing plastic with different colors and composition, such as products that are out of stock and no longer sell and waste plastic generated in the manufacturing process.

We have collaborated with various product manufacturers to recycle unneeded plastic materials and develop trays, combs, jewelry rings, and other products.

This time, we have developed accessory charms and glasses cords that recycle nursing bottles, eye drops bottles, contact lens cases, and household electrical appliances as items that can make the most of the beauty of natural stone, which is a feature of ParallelPlastics.

This is an recommended item for distribution novelties at stores and internal and external events, as well as internal goods.

## ■ Application

Official site : <https://www.parallelplastics.net/>

ParallelPlastics enables us to produce not only accessory charms and glasses cords but also a variety of colors, shapes, and sizes of products.

Please feel free to consult with businesses considering the use of defective plastic products, surplus inventory, etc. handled in-house.

## ■ Features of ParallelPlastics

URL : <https://www.parallelplastics.net/>

In general material recycling\*1, collected plastics are sorted and cleaned, and once returned to pellets, a plastic raw material. Then, by adding virgin material, strength is supplemented and reused.

On the other hand, ParallelPlastics eliminates the process of pelletizing and adds no virgin material. We recycle into products with beautiful designs such as natural stones in a simple way that merely melt and mix plastic with different composition.

Since the recycled plastic purity is 100%, the feature is that it not only reduces costs and energy, but can also be recycled more easily than the conventional method.
