Update: ANX007 Phase 3 Program in GA

August 2024

Forward-Looking Statements and Disclaimers

This presentation contains “forward-looking” statements about Annexon, Inc. and our industry that involve substantial risks and uncertainties. All statements other than statements of historical facts, including statements regarding topline data from the ARCHER Phase 2 trial and post-hoc analyses, our clinical and preclinical programs, timing and commencement of future nonclinical studies and clinical trials and research and development programs, timing of clinical results, strategic plans for our business and product candidates, including additional indications which we may pursue, our financial position, runway and anticipated milestones, are forward-looking statements. In some cases, you can identify forward-looking statements by terminology such as “aim,” “anticipate,” “assume,” “believe,” “contemplate,” “continue,” “could,” “design,” “due,” “estimate,” “expect,” “focus,” “goal,” “intend,” “may,” “objective,” “plan,” “positioned,” “potential,” “predict,” “seek,” “should,” “target,” “will,” “would” and other similar expressions that are predictions of or indicate future events and future trends, or the negative of these terms or other comparable terminology.

Forward-looking statements are not guarantees of future performance and are subject to risks and uncertainties that could cause actual results and events to differ materially from those anticipated, including, but not limited to, risks and uncertainties related to: the ongoing off-treatment follow-up portion of the ARCHER Phase 2 trial and final results from the ARCHER Phase 2 trial; our history of net operating losses; our ability to obtain necessary capital to fund our clinical programs; the early stages of clinical development of our product candidates; the effects of COVID-19 or other public health crises on our clinical programs and business operations; our ability to obtain regulatory approval of and successfully commercialize our product candidates; any undesirable side effects or other properties of our product candidates; our reliance on third-party suppliers and manufacturers; the outcomes of any future collaboration agreements; and our ability to adequately maintain intellectual property rights for our product candidates.

These and other risks are described in greater detail under the section titled “Risk Factors” contained in our Annual Report on Form 10-K and Quarterly Reports on Form 10-Q and our other filings with the Securities Exchange Commission (SEC) Annual Report on Form 10-K filed with the Securities Exchange Commission (SEC) on March 26, 2024 and our other filings with the SEC from time to time. All forward-looking statements in this presentation speak only as of the date of this presentation. Except as required by law, we undertake no obligation to publicly update any forward-looking statements, whether as a result of new information, future events or otherwise.

This presentation concerns drug candidates that are under clinical investigation, and which have not yet been approved for marketing by the U.S. Food and Drug Administration (FDA). These are currently limited by federal law to investigational use, and no representation is made as to their safety or effectiveness for the purposes for which they are being investigated.

This presentation also contains estimates and other statistical data made by independent parties and by us relating to market size and growth and other data about our industry. This data involves a number of assumptions and limitations, and you are cautioned not to give undue weight to such estimates or statistical data. Neither we nor any other person makes any representation as to the accuracy or completeness of such data or undertakes any obligation to update such data after the date of this presentation.

Comparisons to third-party studies are provided for illustrative purposes only. Differences exist between trial designs, study sites, subject populations and applicable products or candidates, and caution should be exercised when comparing outcomes across studies.

***A bold mission to free
the body, brain and eye from
complement-mediated disease***

Overview of ANX007 Geographic Atrophy Program

Structure-confirmed vision benefit in Phase 2 ARCHER study; Phase 3 ARCHER II ongoing

- ✓ Unique neuroprotective MOA, blocking C1q-mediated synapse and neuron elimination
- ✓ Consistent, significant, dose & time-dependent vision protection across pre-specified endpoints
 - Multiple lines of evidence, including: 12 months on-treatment, fellow-eye and off-treatment analyses
 - Benefits demonstrated on multiple visual acuity measures
- ✓ First-in-kind visual function benefit supported by protection of structures correlated with visual function
 - Significant protection of photoreceptors across retina
 - Enhanced protection of photoreceptors and RPE specifically in the foveal center subdomains – structures correlated with visual acuity
- ✓ Generally well tolerated; no CNV increase in treated vs. sham; no reported cases of vasculitis
- ✓ ANX007 1st and only EMA PRIME Designation in GA – based on functional benefit
- ✓ **Global Phase 3 program to confirm ARCHER findings NOW ENROLLING**

Anti-C1q Mechanism of Action

Classical Complement-Mediated Neurodegeneration Extensively Researched in Ophthalmic and Neurological Diseases

Functional clinical benefit previously demonstrated in Huntington's disease and ALS, and now in GA

Ben Barres, M.D., Ph.D.

Discoverer of C1q Technology
Scientific Co-Founder, Annexon

Anti-C1q protective in several models, including:

- Geographic atrophy (photoreceptor damage)
- Glaucoma
- Retinal ischemia
- Huntington's disease
- Amyotrophic lateral sclerosis
- Alzheimer's disease
- Frontotemporal dementia
- Spinal muscular atrophy
- Traumatic brain injury

ANTI-C1q PROTECTS AGAINST SYNAPSE LOSS AND NEURODEGENERATION

- Discovered by Annexon co-founder, Ben Barres, spawning an entire field and validated in multiple labs¹
- Synapse loss correlates with functional decline²
- Synapse loss precedes neuronal loss³

¹Stevens, et al., 2007 DOI 10.1016/j.cell.2007.10.036; Schafer et al., 2012 DOI 10.1016/j.neuron.2012.03.026; Hong, et al., 2016 doi: 10.1126/science.aad8373; Lui et al., 2016 doi.org/10.1016/j.cell.2016.04.001; ²Davies et al., 1987 *J Neurological Sci* 78:151; Terry, et al., 1991 *Ann Neurol* 30:572; ³Yoshiyama et al., 2007 DOI 10.1016/j.neuron.2007.01.010

Anti-C1q: A Distinct Neuroprotective Mechanism

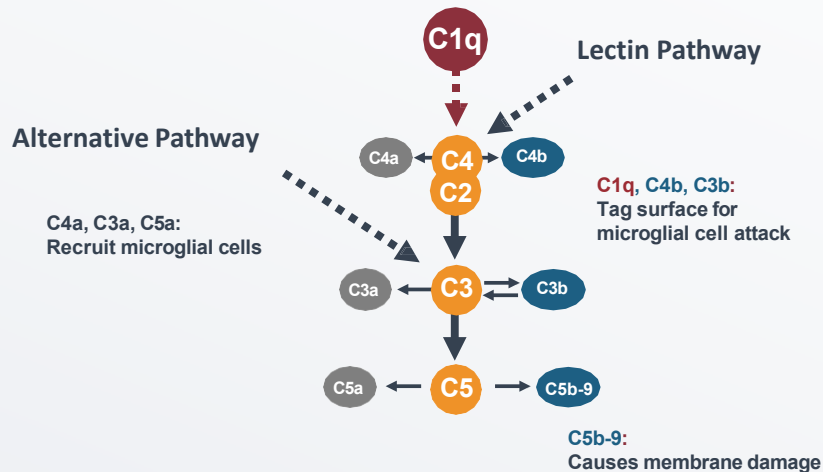

C1q initiates classical complement cascade to drive photoreceptor synapse & cell loss and neuroinflammation

- C1q is a **key driver of neurodegeneration**¹
- C1q anchors classical pathway activation on **photoreceptor cells to cause inflammation and loss**²
- **ANX007 inhibits C1q** and all damaging components of the classical pathway³

C1q binds stressed photoreceptor synapses and activates the classical pathway

In GA, **C1q** also binds photoreceptor cell outer segments, cellular breakdown products and drusen (e.g., CRP, amyloid)⁴

Anti-C1q Protected Photoreceptor Cells and Their Function in Models of Photoreceptor Damage

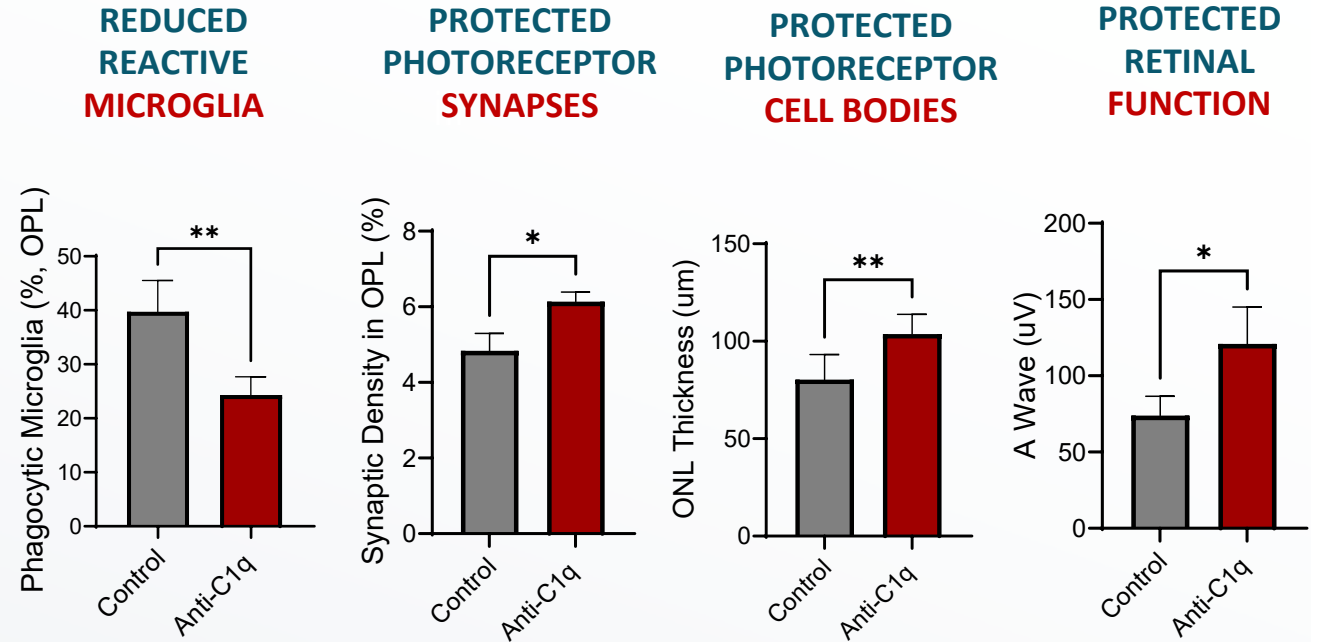

C1q Deposition on Photoreceptor Cells and Synapses with Light-Induced Damage

Synapses/C1q/Microglia

Tassoni, et al., Annexon on file

Anti-C1q Protected Photoreceptors and Function

Photoreceptor Cells, Synapses & Function Lost Prior to RPE in GA

- Photoreceptor cells and their synapses are lost over intact RPE (white box)
 - Decreasing gradient of **red-labeled synapses** (w/ white arrows) moving toward the lesion on right - loss of synapses is loss of function¹
 - Also, decreasing gradient of **blue-labeled photoreceptor cells** toward lesion – photoreceptors are lost prior to RPE²
- FAF measures RPE loss/lesion growth, but not photoreceptor or synapse loss and correlates poorly w/ visual function³

ARCHER Trial Overview

Geographic Atrophy (GA): Progressive and Life-altering Disease that Remains a Leading Cause of Blindness in Elderly People

- Advanced form of age-related macular degeneration (AMD)
- Chronic, progressive neurodegenerative disease of the eye with irreversible vision loss
- 1M people diagnosed in US; 2.5M in EU
- Diagnosis can be traumatic and impact the social and financial aspects of patients lives, including reading, daily activities and recognizing faces
- **No currently approved therapies have demonstrated preservation of visual function**
- **Urgent unmet need to protect against vision loss**

ANX007: Differentiated Inhibitor of C1q and Classical Complement to Treat Geographic Atrophy

ANX007

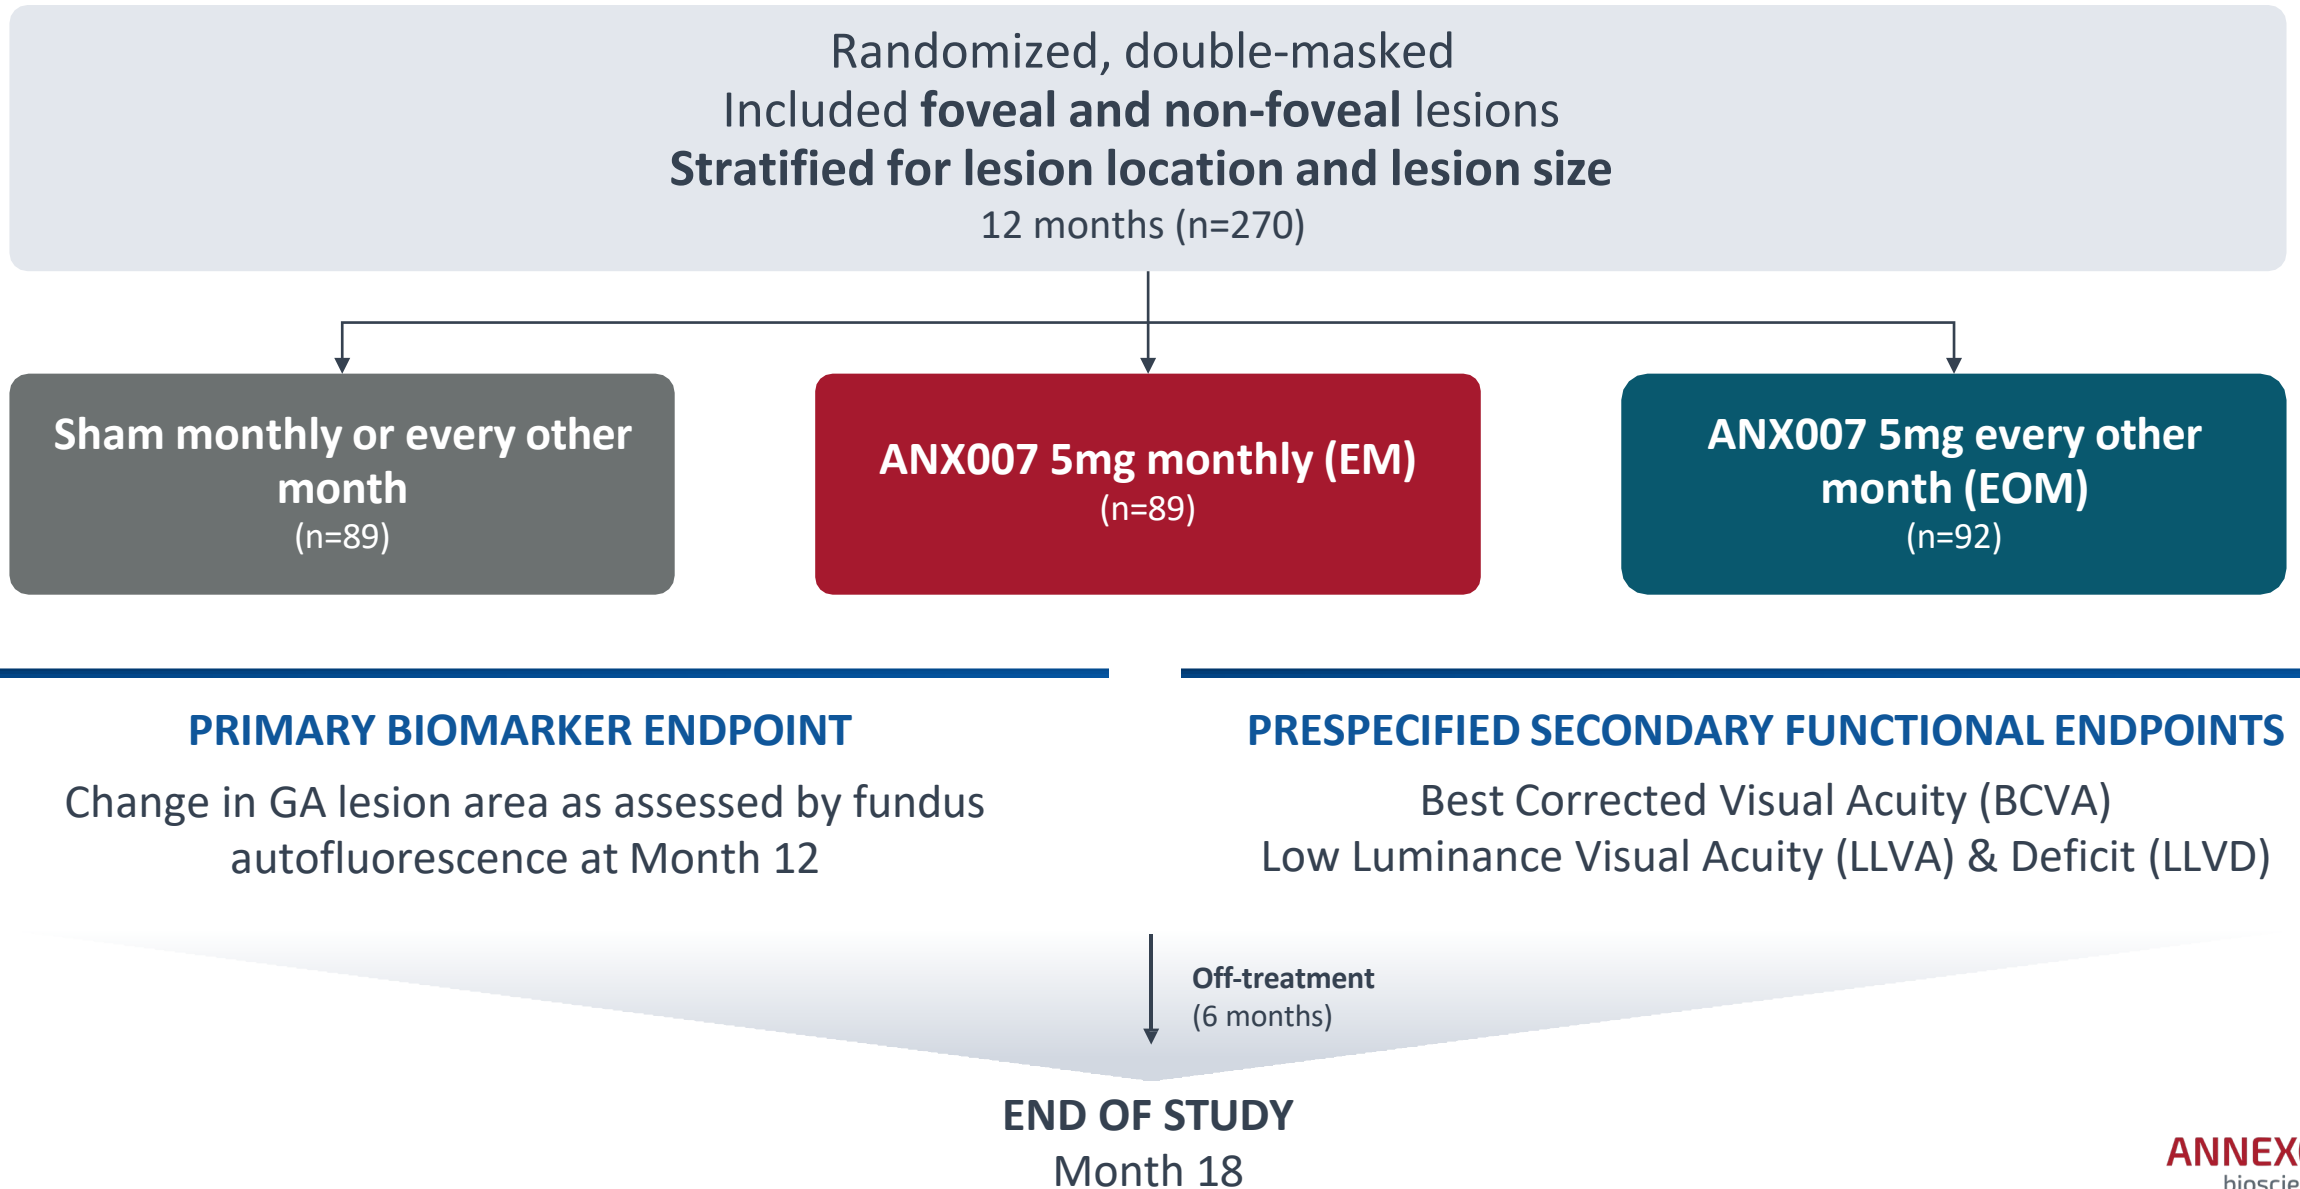

IVT administered antigen-binding fragment (Fab)

KEY ATTRIBUTES

- ✓ **Design:** Modeled after established IVT-administered Fab antibodies; same antigen recognition structure as ANX005 – full length anti-C1q antibody well tolerated as IV treatment in GBS
- ✓ **Profile:** 50kD Fab antibody; **low viscosity / non-pegylated**; <10 pM potency formulated for intravitreal administration
- ✓ **Dosing:** 5 mg / 100 microliters in Ph2; PK in patient aqueous humor supports monthly/every other month dosing; **25 microliter dose in Ph3**
- ✓ **Specificity:** **Full target engagement** / inhibition of classical complement pathway observed; **lectin and alternative pathway in place** for immune and homeostatic functions¹

ARCHER Trial Visual Acuity Results

ANX007 Demonstrated Statistically Significant Protection From Vision Loss as Measured by BCVA ≥ 15 -Letter Loss

**PATIENTS WITH PERSISTENT BCVA
 ≥ 15 -LETTER LOSS THROUGH MONTH 12#**

- First known significant preservation of vision in GA
- Dose-dependent response
- BCVA ≥ 15 -letter loss universally deemed clinically meaningful

#Persistent for two consecutive visits through month 12 or at last study visit
^Nominal p-value from a Chi-square test in ITT population: * Nominal p < 0.05
Final data

Significant, Time-Dependent Protection From ≥ 15 -Letter Vision Loss with ANX007 Monthly Treatment

BCVA ≥ 15 -LETTER LOSS AT 2 CONSECUTIVE VISITS THROUGH MONTH 12[#]

EM (n=89)

73% Risk Reduction ANX007 EM

HR (CI) = 0.272 (0.090 to 0.819); p = 0.0098

EOM (n=92)

53% Risk Reduction ANX007 EOM

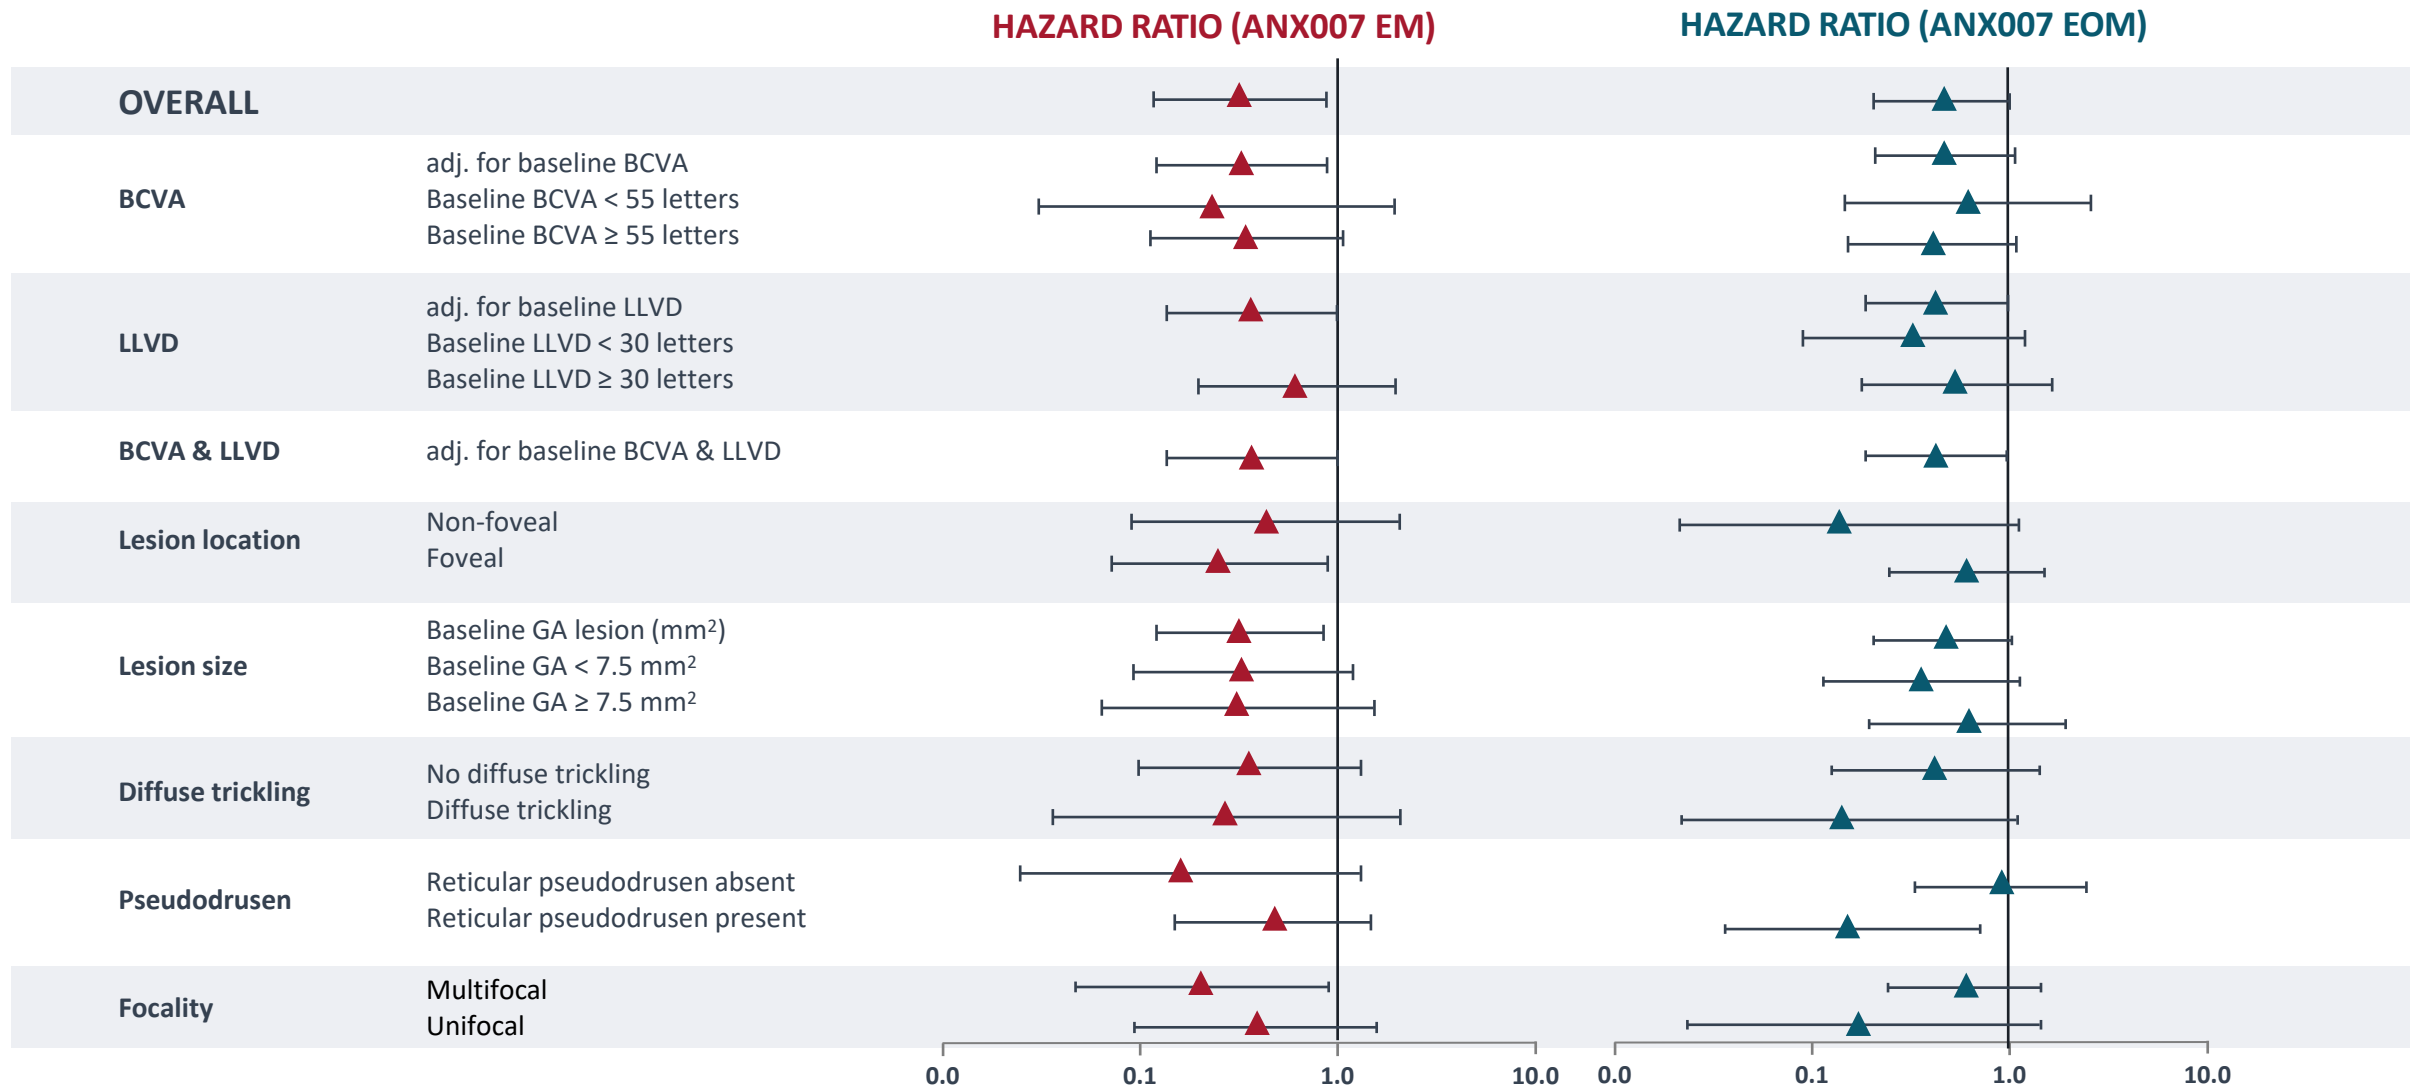

HR (CI) = 0.504 (0.214 to 1.190); p = 0.0788

Sham (n=89)

**Increasing
ANX007
Impact
Over Time**

HR, hazard ratio; Nominal log-rank test (versus sham) p-values are presented;
[#]Persistent BCVA 15-LL at two consecutive visits including month 12 supported by ensuing (off-treatment) visit
 Final data

ANX007 Protection from Vision Loss Consistent Across Baseline Characteristics

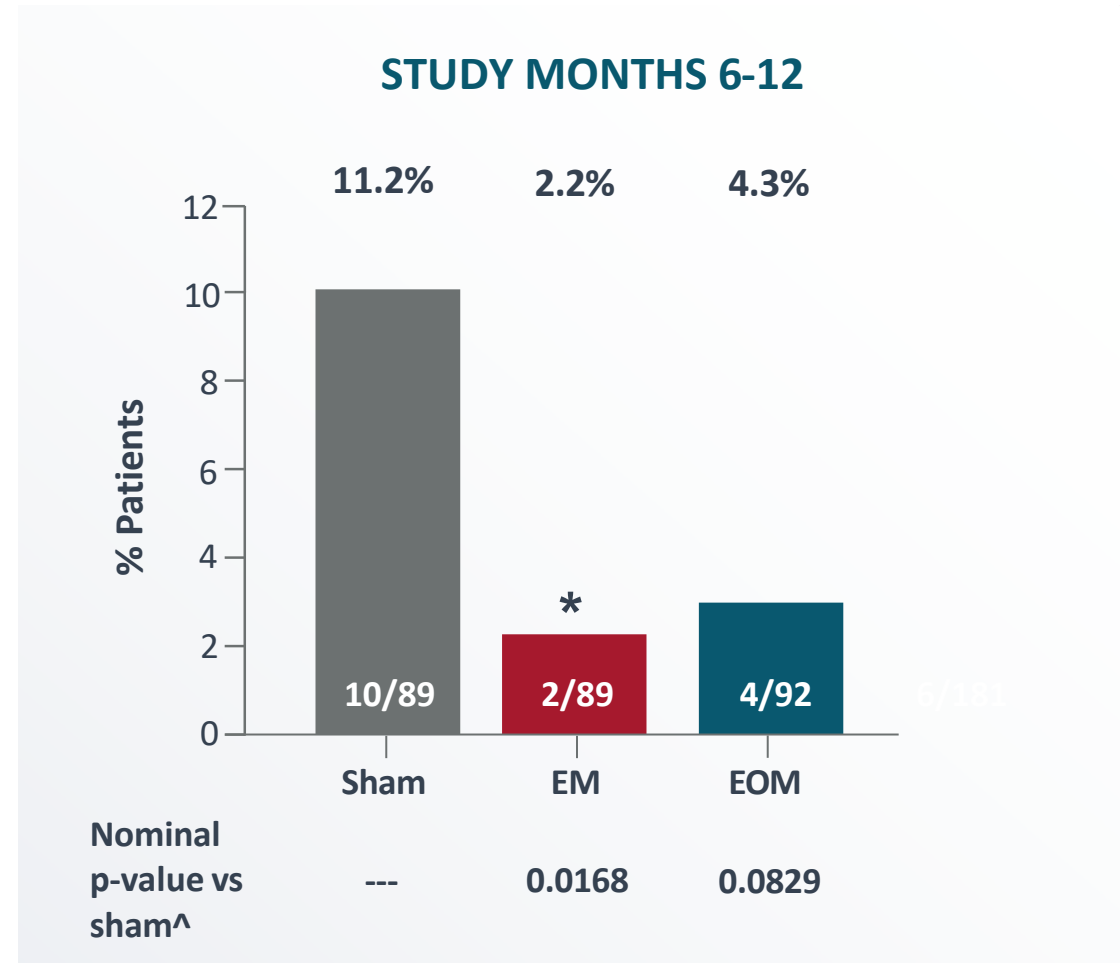

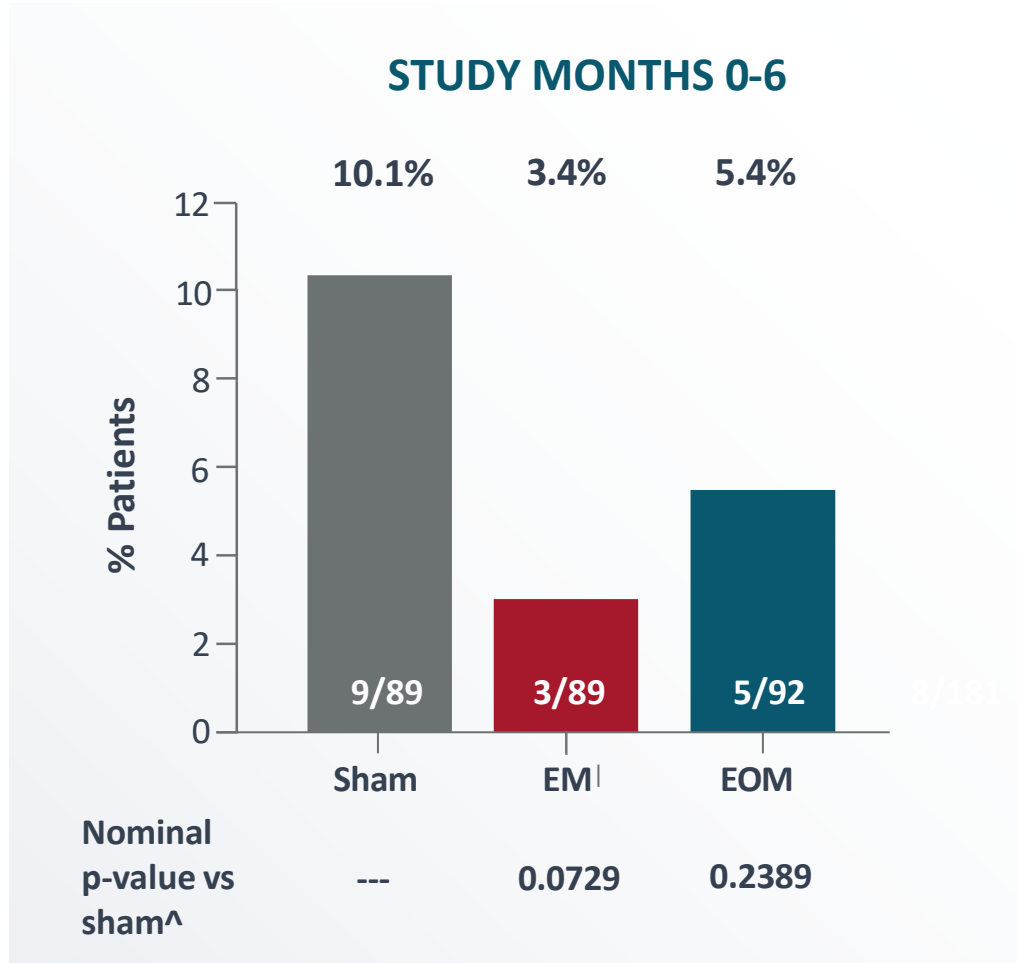

*persistent for two consecutive visits through month 12 or at last visit; Hazard ratios are from Cox regressions accounting for event time and censorship

NOTE: Hazard ratio not estimated for ANX007 EM vs Sham with baseline LLVD < 30 due to zero (0) event in ANX007 EM group for the subgroup.

ANX007 Effect on BCVA ≥ 15 -Letter Loss Improves with Longer Treatment

PATIENTS WITH PERSISTENT BCVA ≥ 15 -LETTER LOSS

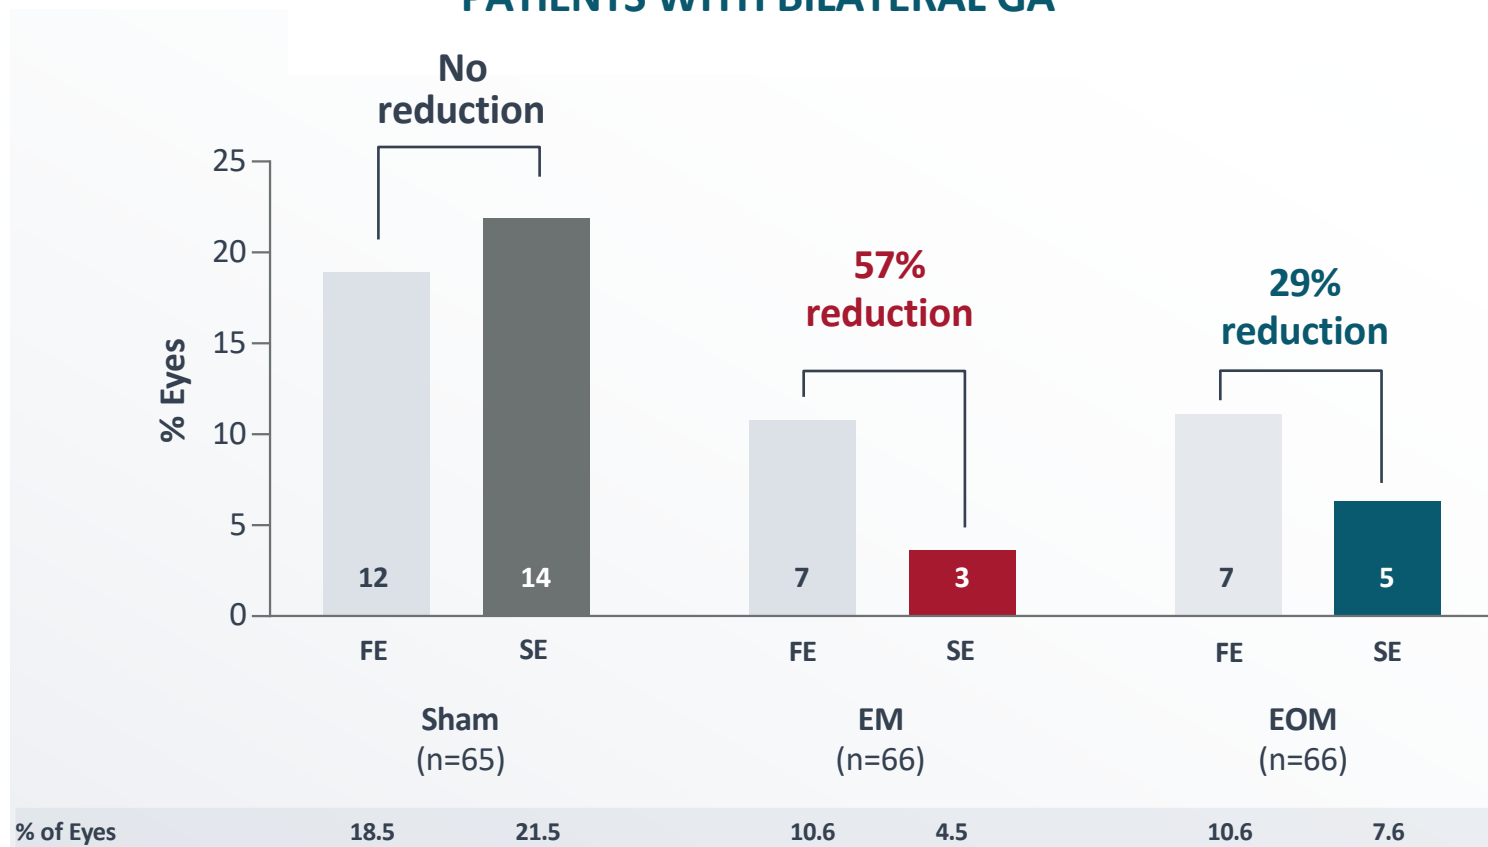

*Persistent for two consecutive visits through month 12 or at last visit; ^Nominal p-value from a Chi-square test in ITT population; * Nominal P < 0.05

Increasing ANX007 Impact Over Time

Protection From Vision Loss Supported by Fellow Eye Analysis

EYES WITH ≥15-LETTER BCVA LOSS AT MONTH 12 IN ALL PATIENTS WITH BILATERAL GA

- Sham: No reduction in BCVA vision loss study vs. fellow eye
- Dose dependent protection from vision loss in ANX007 treated study eyes relative to fellow eyes
 - EM: 57% reduction in 15-letter loss
 - EOM: 29% reduction in 15-letter loss

EM, every month; EOM, every other month; Pooled: EM+EOM; FE, fellow eye; SE, study eye
 All patients with bilateral GA were included due to small sample size

Consistent Protection from Vision Loss with BCVA ≥ 10 , ≥ 15 and ≥ 20 -Letter Assessments

Persistent BCVA Vision Loss Through Month 12[#]

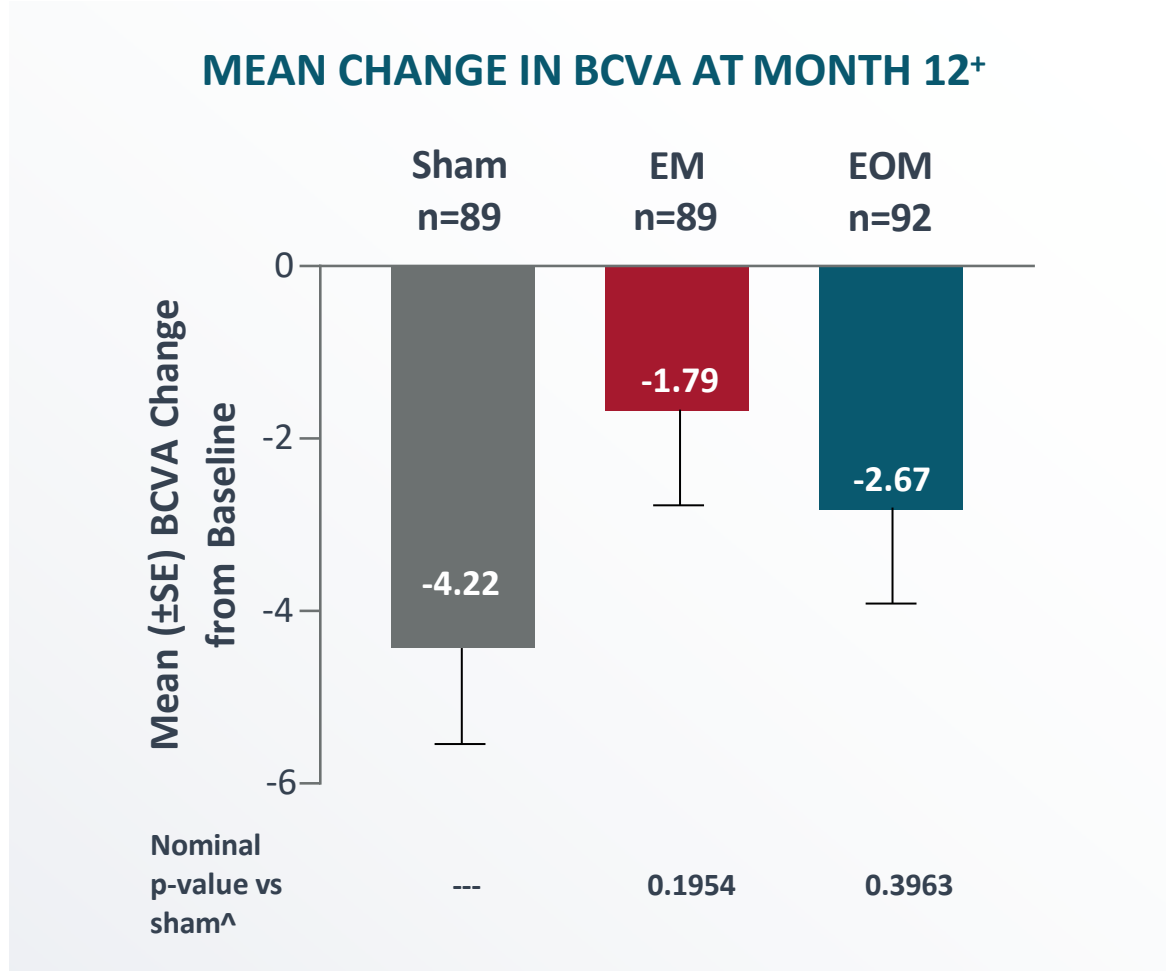

[#]Persistent for two consecutive visits through month 12 or at last visit

[^]Nominal p-value from a Chi-square test in ITT population

* P < 0.05

Mean Change in BCVA at Month 12 Further Supports Consistent Protection From Vision Loss with ANX007 Treatment

- Trend for dose-dependent response in ANX007 treated groups
- BCVA loss in sham through 12 months consistent with previous GA trials^{1,2,3}

^{*}Mean, standard error (SE), and p-value based on MMRM adjusting for baseline lesion location, lesion focality, baseline GA lesion, and the baseline GA lesion by visit interaction.

[^]Nominal p-value from MMRM adjusting for baseline lesion location, lesion focality, baseline GA lesion, and the baseline GA lesion by visit interaction in ITT population

¹Liao et al (2020) *Ophthalmology* 127: 186-195; ²Holtz et al (2018) *JAMA Ophthalmology* 136:666-677;

³Heier et al, *Retina Society* 2022

ANX007 BCVA Subgroup Analysis: Protection from Vision Loss Observed in Both Foveal and Non-Foveal Patients

PATIENTS WITH PERSISTENT BCVA \geq 15-LETTER LOSS THROUGH MONTH 12#

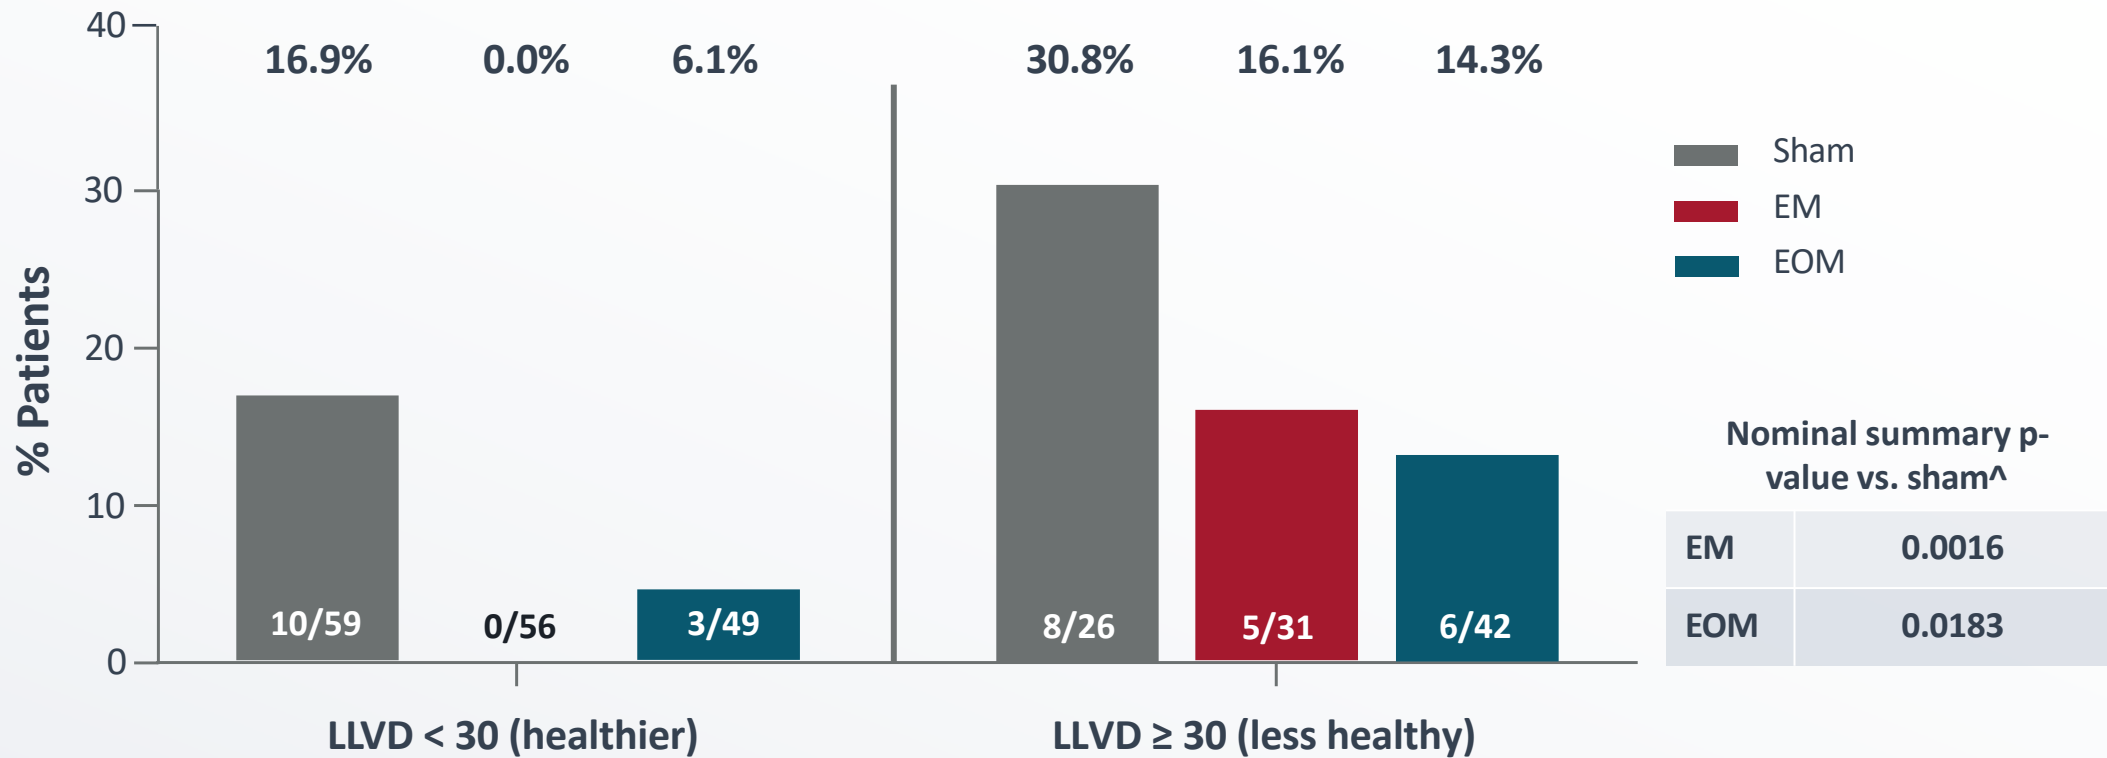

#Persistent for two consecutive visits at any time through month 12 or at last study visit
[^]Nominal p-value from a Cochran Mantel-Haenszel test (General Association) in ITT population
 Final data

Greatest Effect of ANX007 in Earlier / Healthier Patients

Protection from vision loss (BCVA \geq 15-Letter) based on retina health at baseline

PATIENTS WITH PERSISTENT \geq 15-LETTER LOSS INCLUDING MONTH 12#

#Persistent for two consecutive visits including month 12

^Nominal p-value from a Cochran Mantel-Haenszel test (General Association) in ITT population

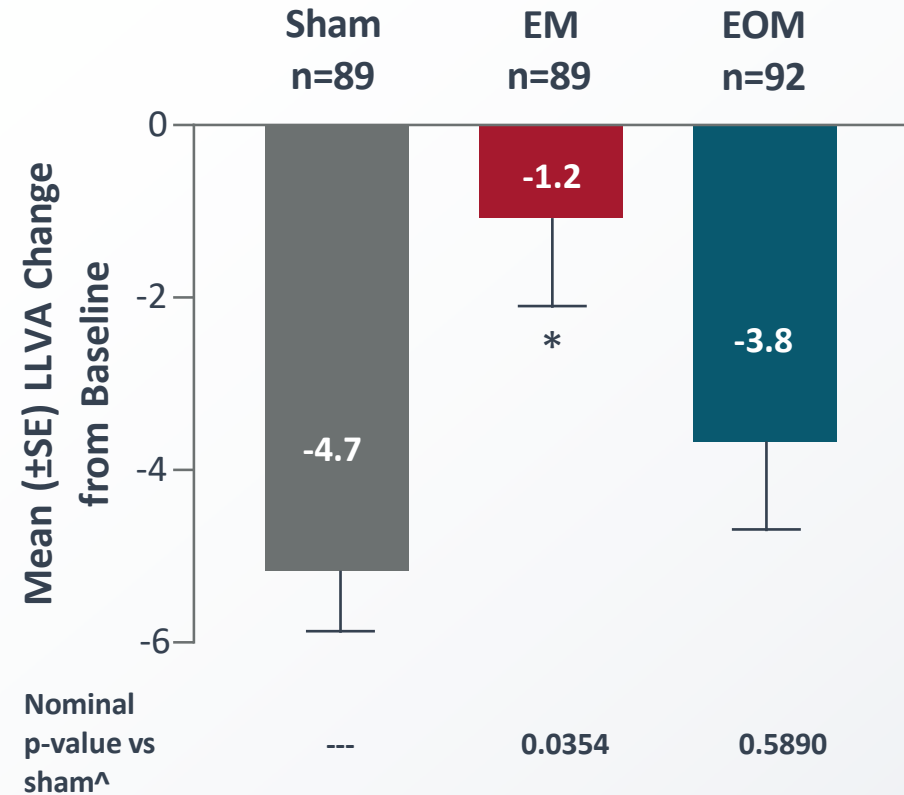

Consistent Protection From Vision Loss with ANX007 Treatment Also Demonstrated with LLVA

LLVA ≥15-LETTER LOSS THROUGH MONTH 12#

#Patients with single LLVA ≥15-letter loss event and at least one post-baseline LLVA measurement
[^]Nominal p-value from a Chi-square test
 Final data

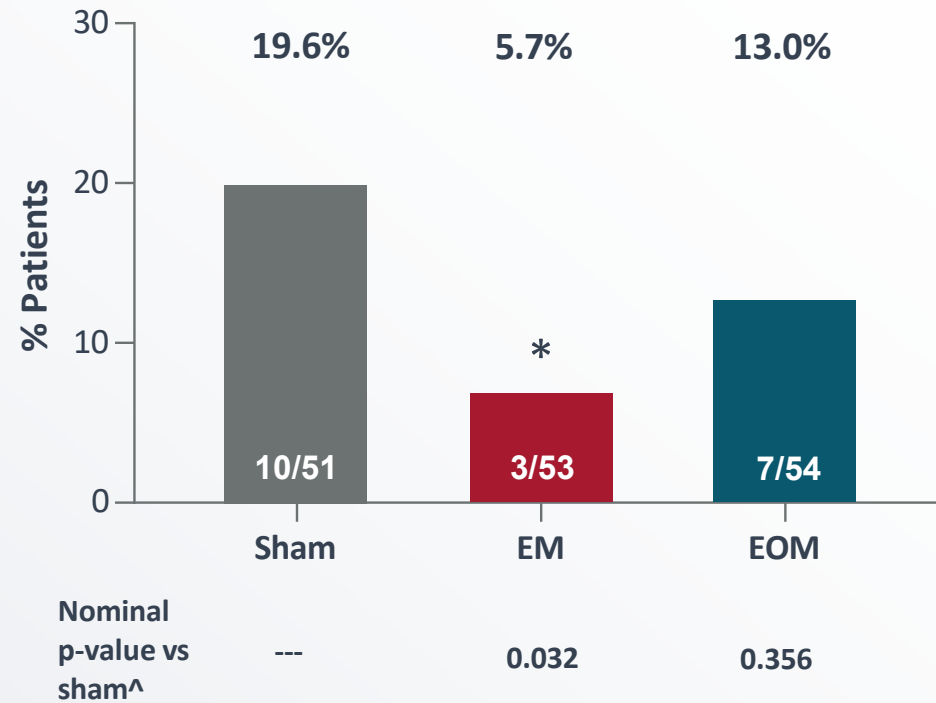

MEAN CHANGE IN LLVA AT MONTH 12⁺

*Mean, standard error (SE), and p-value based on MMRM adjusting for baseline lesion location, lesion focality, baseline GA lesion, and the baseline GA lesion by visit interaction.
[^]Nominal p-value from a Chi-square test in ITT population
 * Nominal P < 0.05
 Final data

ANX007 Provided Consistent Protection from Vision Loss by LLVD

LLVD ≥ 15 -LETTER WORSENING THROUGH MONTH 12⁺

⁺in subjects with BCVA ≥ 55

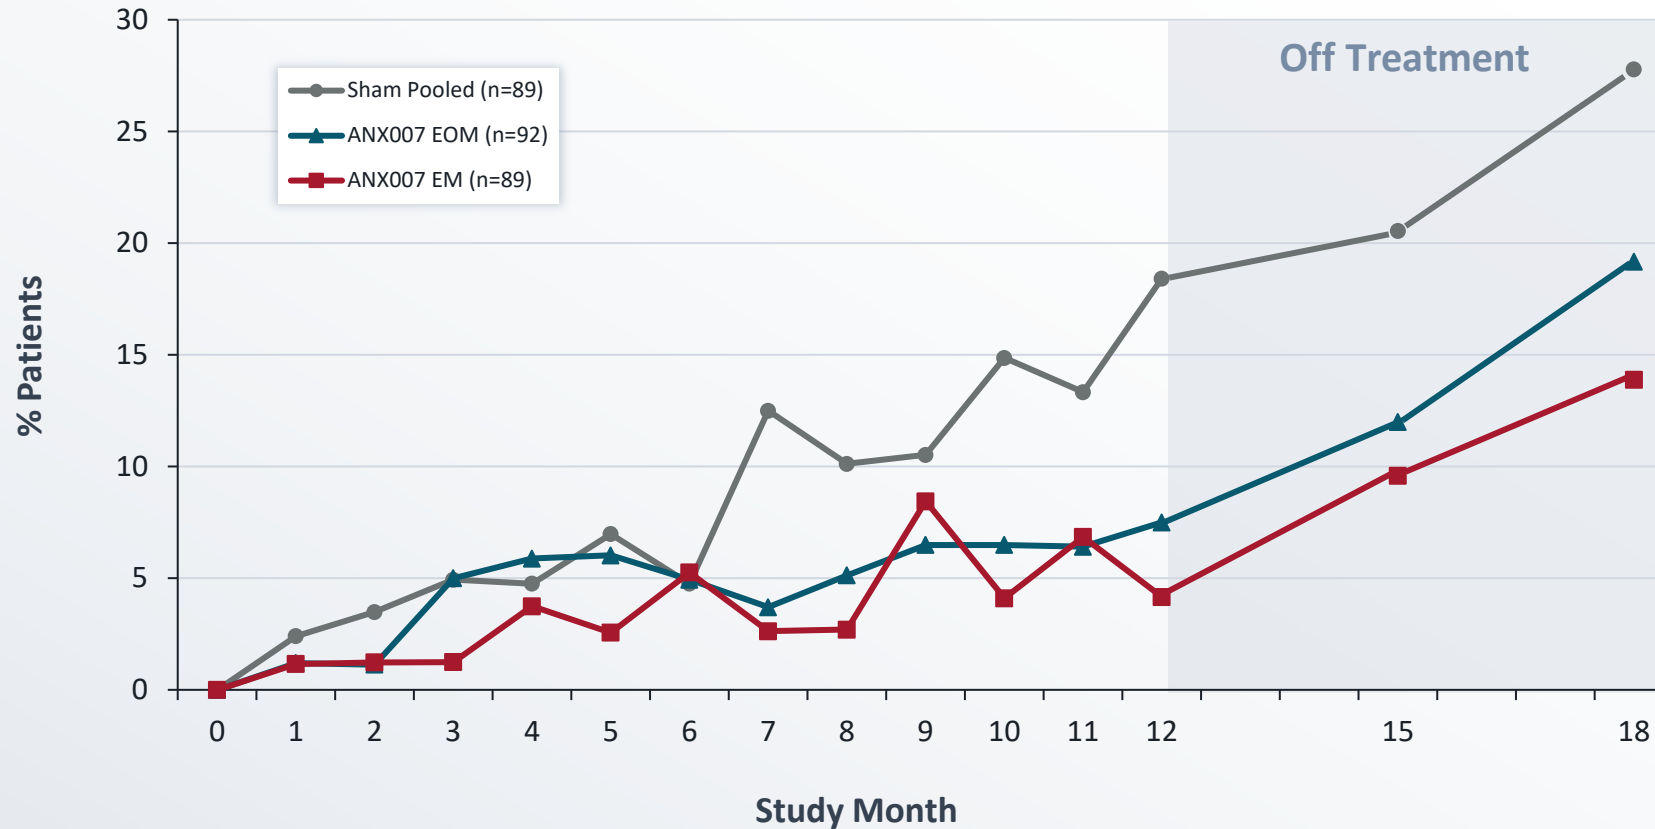

[^]Nominal p-value from a Chi Square test

*p<0.05

BCVA ≥ 15 -Letter Loss Accelerated After Cessation of Treatment

Consistent with true on-treatment drug effect and disease-modifying mechanism of action

PATIENTS WITH ANY BCVA ≥ 15 -LETTER LOSS FROM BASELINE

- Low frequency (<0.6% per month) of single BCVA ≥ 15 -letter losses in EM- and EOM-treated groups during 12-month treatment period
- While benefit was maintained after treatment cessation the rate of BCVA ≥ 15 LL increased to parallel that of sham (>1.6% per month)

ANNEXON
biosciences

ANX007 Impact on Retinal Structure

Change in OCT Ellipsoid Zone (EZ) Directly Measures Photoreceptor Anatomy

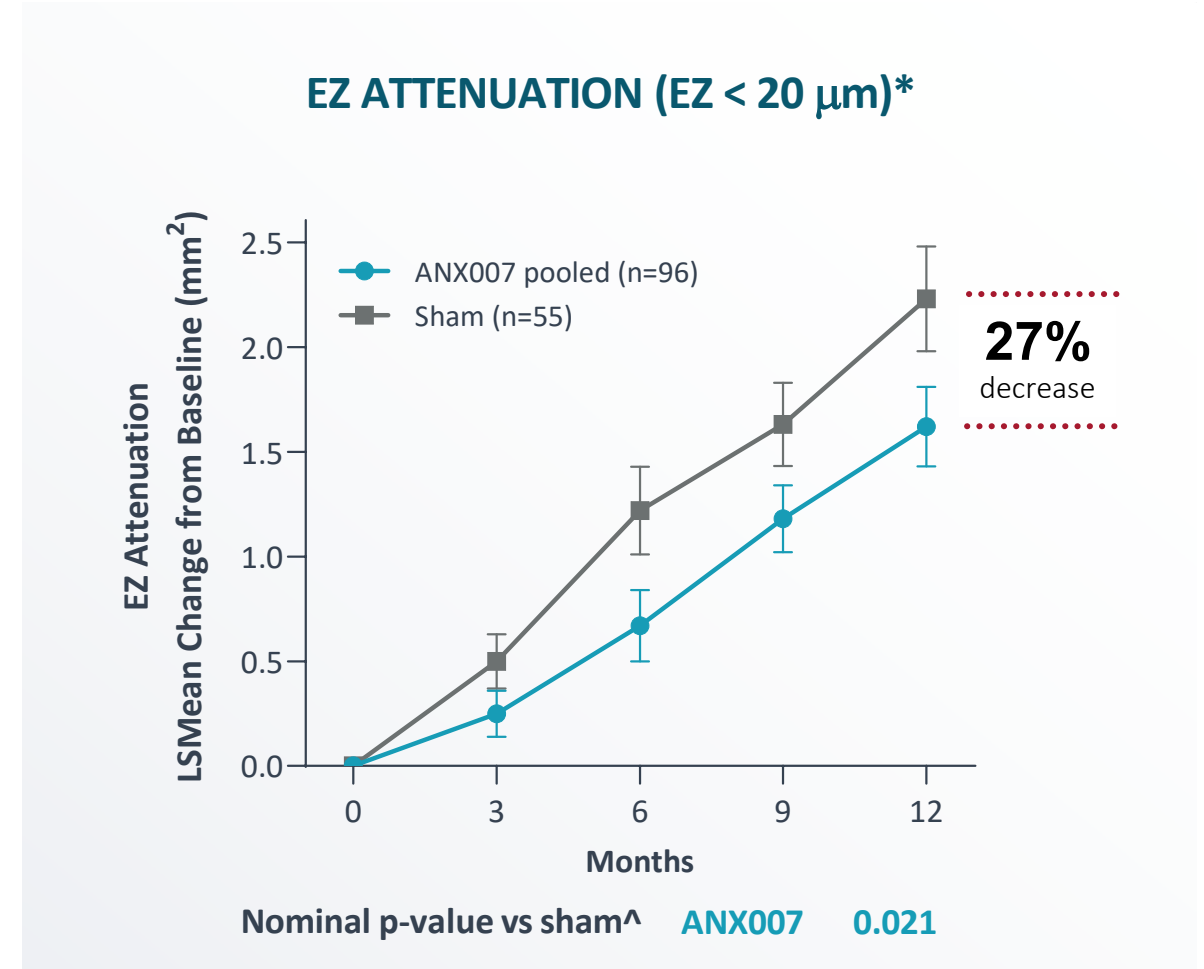

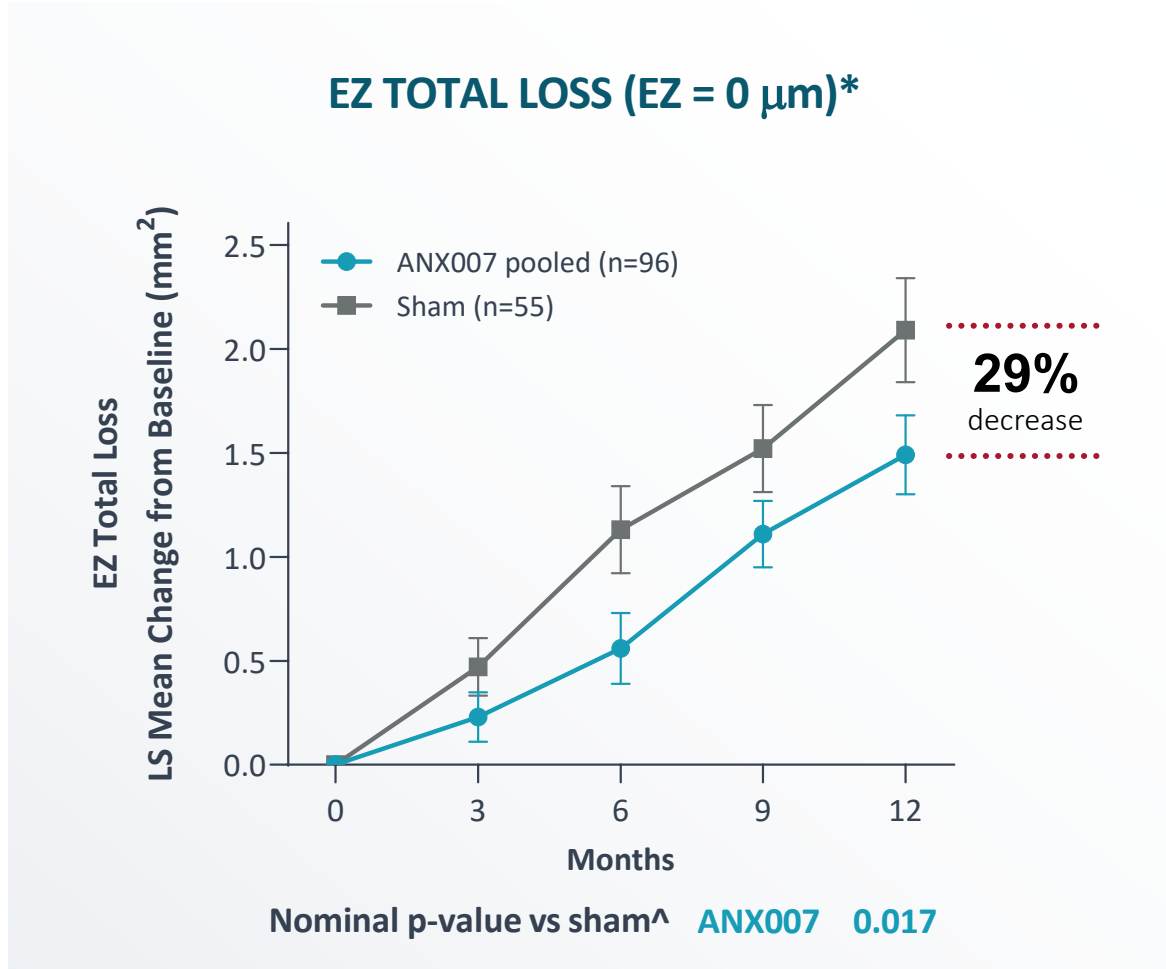

octscans.com

ARCHER EZ Population

Sham	ANX007 EM	ANX007 EOM	Total
71	60	62	193

- 193 patients with OCT scans from Heidelberg Spectralis
- Patient demographics and study eye characteristics were generally well balanced across groups
- Same treatment effect between sham, EM and EOM groups as in whole study population

ANX007 Significantly Protected Photoreceptors Across Retina Through 12 Months

^Nominal p-values from a mixed model for repeated measures (MMRM) analysis; Heidelberg Spectralis OCT population with baseline OCT data (n=151)

*Two treatment groups (EM and EOM) were not different statistically

EZ Disruption in Central Fovea, Not Across Full Retina, Correlates with BCVA in GA Patients[^]

Parameter	Region	Correlation with GA Eyes (Pearson r value)
EZ Loss	1mm	-0.49*
	2mm	-0.54*
	Pan-macula	-0.34 (ns)

* $p \leq 0.05$

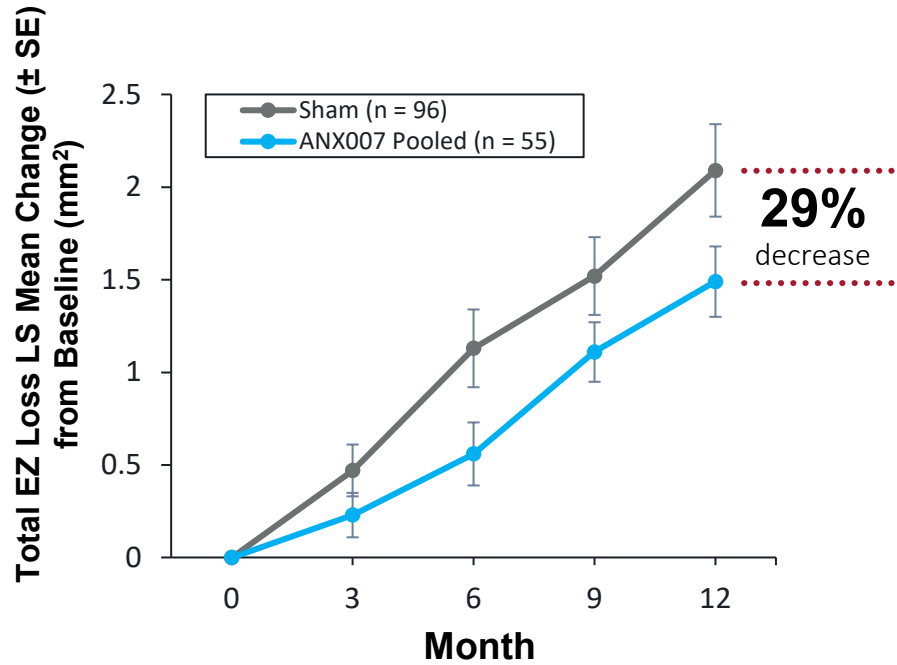

[^]From Yordi et al (2024) J Pres Med 14: 543

Photoreceptor Protection Through 12 Months in Central Fovea

More robust protection with ANX007 in center, area most closely associated with visual acuity, compared to pan-macula

TOTAL EZ LOSS (EZ = 0 μm)*

PAN-MACULA

ANX007 0.017

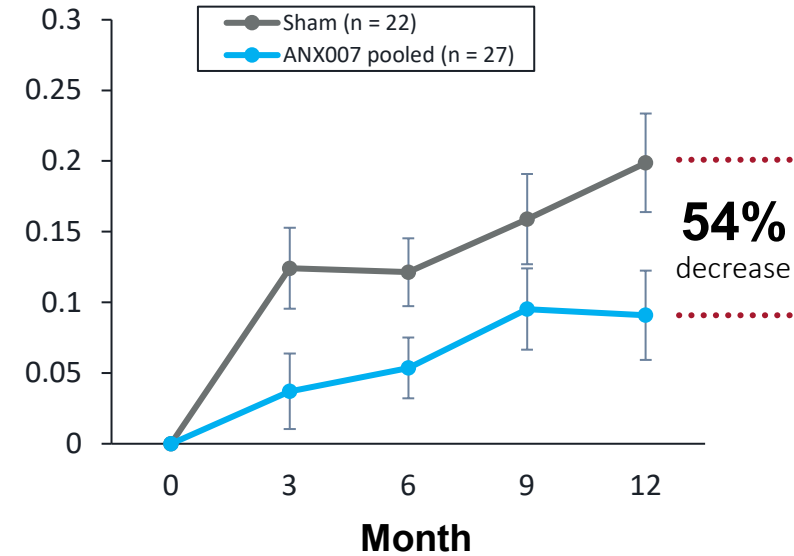

Nominal p-value vs sham[^]

CENTRAL 2.0 MM

ANX007 0.0203

CENTRAL 1.5 MM

ANX007 0.017

[^]Nominal p-values from a mixed model for repeated measures (MMRM) analysis; Heidelberg Spectralis OCT population with baseline OCT data (n=151);

*Two treatment groups (EM and EOM) were not different statistically

ANX007 Did Not Significantly Reduce RPE Loss Across Full Retina, but Effects Increased Over Time

RPE LOSS FROM BASELINE TO MONTH 12#

CHANGE IN RPE LOSS OVER TIME#

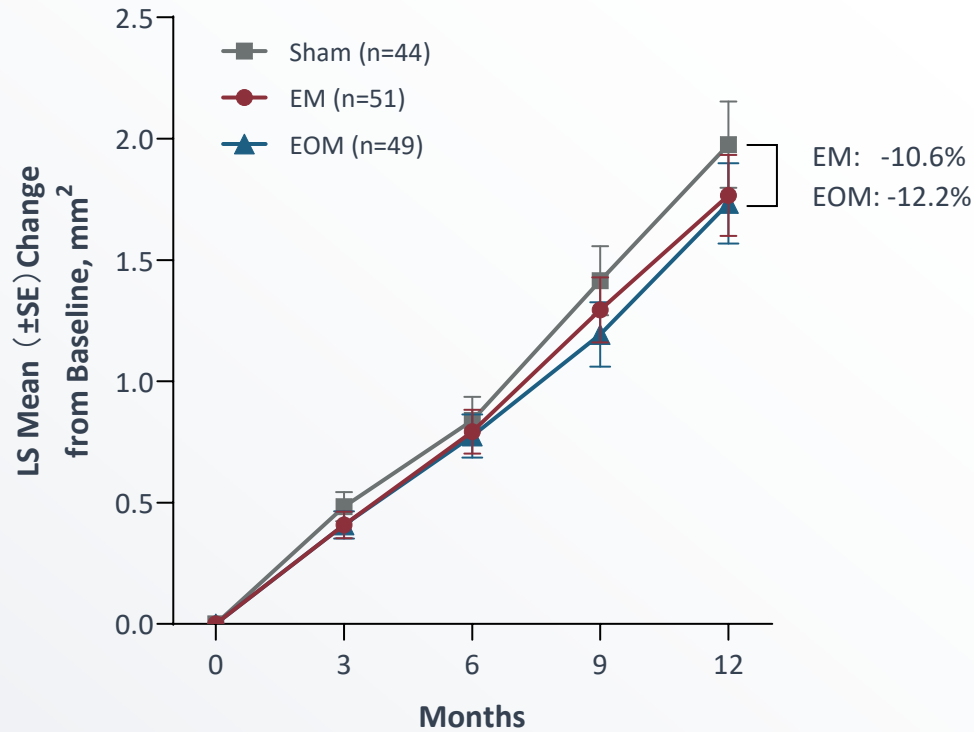

#Least-square (LS) mean and its standard error (SE) are based on a mixed-effect model for repeated measures (MMRM) adjusting for baseline lesion location, lesion focality, baseline GA lesion, and the baseline GA lesion by visit interaction.

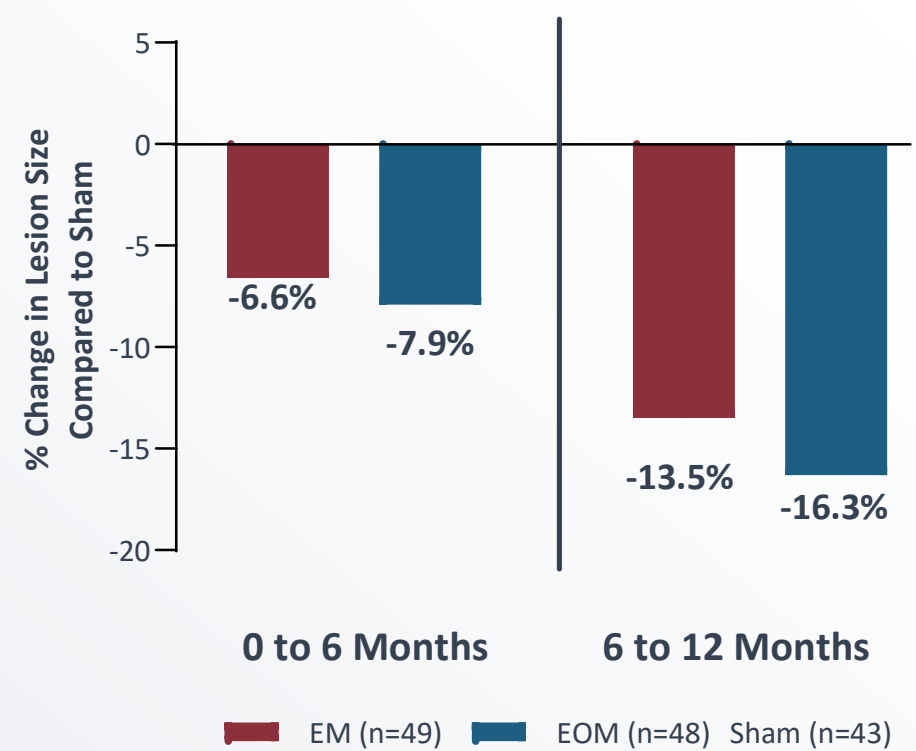

Stronger Impact on RPE Loss in Patients with Foveal Involvement at Baseline – Suggesting Differential ANX007 Effect in Foveal Center

Greater protection of RPE in region responsible for visual acuity

**RPE LOSS FROM BASELINE TO MONTH 12#
FOVEAL PATIENTS**

**CHANGE IN RPE LOSS OVER TIME#
FOVEAL PATIENTS**

#Least-square (LS) mean and its standard error (SE) are based on a mixed-effect model for repeated measures (MMRM) adjusting for baseline lesion location, lesion focality, baseline GA lesion, and the baseline GA lesion by visit interaction.

RPE Loss within the Central Fovea Correlates with BCVA Loss¹

Correlation in central 1mm seen as early as 6 months; RPE loss across full retina not well correlated with BCVA loss

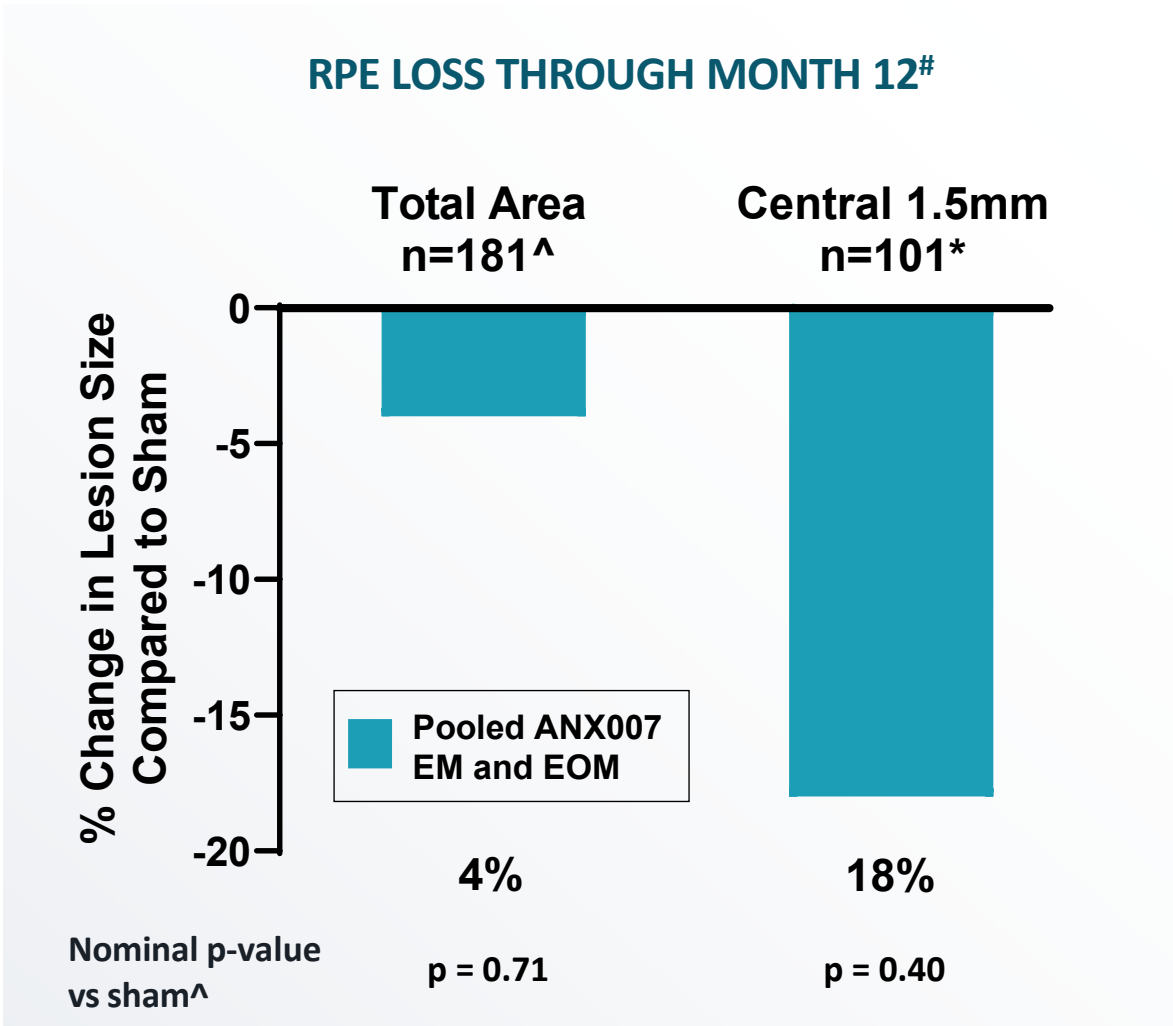

Spearman Correlation Coefficients Comparing the Changes in RPE Area with BCVA Change Over Time

Location	Month 6	Month 12	Month 18
Full 6 mm diameter	p=0.59	p=0.15	p=0.03
1mm foveal center	p=0.03	p=0.001	p<0.0001

- Correlation in central 1mm as early as 6 months
- Overall lesion growth correlates after 18 months

ANX007 Protection from RPE Loss More Robust in 1.5 mm Foveal Center

Consistent with treatment that protects from vision loss

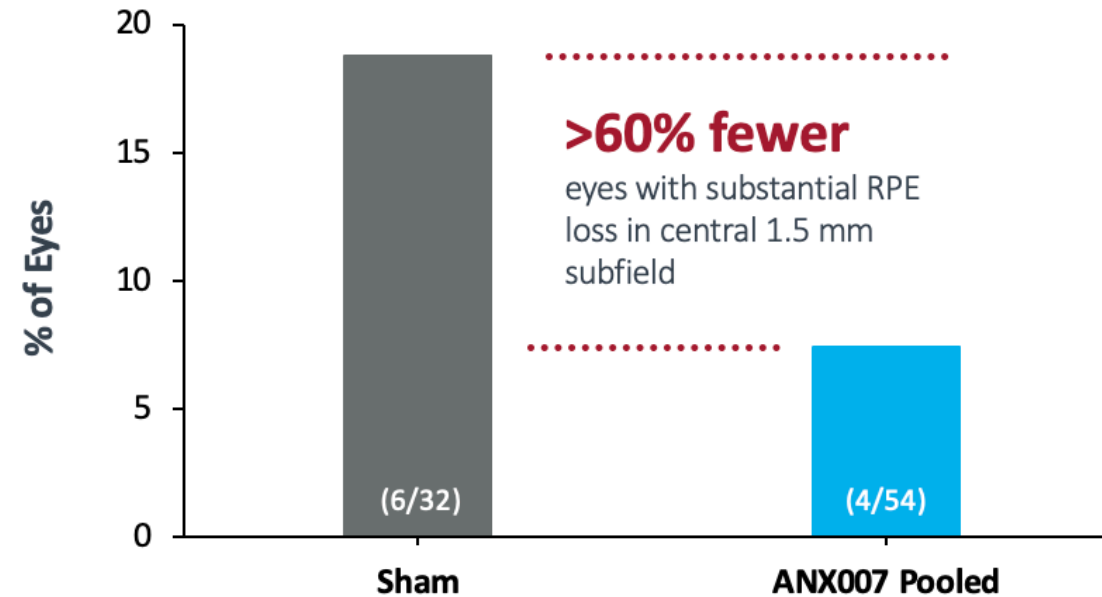

[#]From a mixed model for repeated measures (MMRM) analysis; [^]ITT population

^{*}Heidelberg Spectralis OCT population with baseline OCT data, excludes patients with >98% atrophy at baseline

In Patients with Foveal Center RPE Remaining, ANX007 Reduced Patients Experiencing Substantial RPE Loss by 60%

EYES WITH SUBSTANTIAL RPE LOSS FROM BASELINE* IN CENTRAL 1.5 MM AT 12 MONTHS#

#Eyes with at least 25% of RPE intact in the central 1.5mm at baseline (n = 86) in patients with Heidelberg Spectralis OCT scans (overall total n=193)

*Substantial RPE loss defined as 25% absolute loss of RPE

ANX007 Generally Well-Tolerated

Phase 3 Program Overview

ANX007 Global GA Pivotal Program INITIATED

ARCHER II enrollment ongoing; ARROW trial initiation in late-2024

PRIMARY ENDPOINT

Persistent BCVA ≥ 15 -Letter Loss through ~12 months*

*Primary analysis based on accumulation of BCVA ≥ 15 -letter loss target events assessed between months 12-18 from initiation of dosing

SECONDARY ENDPOINTS

Safety, Low Luminance VA (LLVA), Anatomic assessments

ANX007: A Novel Neuroprotective Agent Demonstrating Vision Protection Supported by Structure Protection Now in Phase 3

Blocking C1q for neuroprotection, prevented synapse loss and protected photoreceptors from elimination

ANX007, an anti-C1q Fab antibody administered IVT, **consistently protected against the loss of visual acuity** in the Phase 2 ARCHER study

Visual function benefit **supported by protection of retinal structures**, particularly those structures closely associated with visual function – **photoreceptors and foveal RPE**

ANX007 treatment was **generally well-tolerated**; no CNV increase; no reported cases of vasculitis

Regulatory-aligned Phase 3 program NOW ONGOING

To the patients, families, caregivers, physicians and medical teams who participated in our trial, we are eternally grateful for your support and contributions!

To our employees, collaborators and advisors, thank you for your Warrior Spirit and All For One commitment!
