

Dear Investors;

We wanted to inform you that multiple large forest fires have entered our property and are causing very material damage. Fire prevention defensive features are having only a limited impact on controlling the large damage from the fire and winds and only rain during the dry season will tame the fire. Our irrigation systems are very helpful but not enough.

Our neighbors are all affected. The few fires started by our neighbors were coordinated, controlled and terminated. The fire is coming from afar and multiple places.

We understand that this is a systemic issue in the Brazilian Amazon and Peru has no forest fire fighting effort.

Our employees and neighbors have so far not suffered injuries and they are bravely but responsibly doing their best to control the fire and protect the critical areas of the property and most importantly their health and lives.

As soon as we have visibility on how this critical situation evolves we will inform accordingly.

Best

LXG Amazon Reforestry Fund
