These units have extensive coverage and can support a high density of users. The point-to-point capabilities provide an extended range, as the radios can be deployed in most frequencies, both (licensed and unlicensed) and public safety in the 4.9 GHz frequency spectrum. Once the wireless network has been deployed, the built in APs can provide wireless access for many types of communications and can support services, including, but not limited to the following: WiFi, Streaming, Video Surveillance, PA Systems, VoIP, and IoT connectivity. These Wireless Solutions have been deployed successfully in Convention Centers, Auditoriums, Stadiums, Large Office Spaces, Warehouses, Public Parks and Marinas. Most provisioned services have an existing customer base.

The Company has also acquired the license to build and sell a patented street light fixture that can host micro wireless devices, including cellular small cells for cellular operators, to significantly improve internet reception and connectivity from the reach of each street light pole. This product has been deployed already in a Miami Dade County city and in several sites in Mexico and is operating efficiently. The light fixture has the technology to host a variety of LTE devices and is also ready for the next generation of newer technologies, including 5G devices, as well as hosting Wi Fi devices and video surveillance equipment. The light fixture is manufactured in South Florida. The Company believes that this patented technology will substantially improve both connectivity and security in urban areas that presently suffer from insecure and unstable WiFi internet.
