With these acquisitions, the Company ceased to operate as a shell and acquired revenue generating operations in the agricultural business working to increase soil quality and without sacrificing crop yields in China.

The Company operates in the agricultural business working to increase soil quality and thereby crop yields. We produce microbes for fertilizer to create microbial fertilizer which is added to soil. This increases the health of the soil and thereby crop health. As crops grow year round in China there is no time for fallow periods for the land, which is particularly important in order to maintain quality of soil and the crops by allowing maximum nutrient load in soil improving overall soil quality and longevity. Liaoning also has demonstration farms; organic farms where they teach farmers how to create and maintain an organic farm format and soil composition. This allows the farmer to see the level of product the organic soil can produce.

There are currently 395,108,037 shares of Chykingyoung Investment Development Holdings, Inc. common stock outstanding as reported by the transfer agent, which is consistent with the corporate records of the issuer.
