Cautionary Statements

Use of Non-GAAP Financial Measures

In this presentation, Ameren has presented weather-normalized and core earnings per share, which are non-GAAP financial measures and may not be comparable to those of other companies. A reconciliation of GAAP to non-GAAP information is included in this presentation. Generally, core earnings or losses include earnings or losses attributable to Ameren common shareholders and exclude income or loss from significant discrete items that management does not consider representative of ongoing earnings. Ameren uses core earnings internally for financial planning and for analysis of performance. Ameren also uses core earnings as the primary performance measurement when communicating with analysts and investors regarding its earnings results and outlook, as the company believes that core earnings allow the company to more accurately compare its ongoing performance across periods. Weather-normalized earnings exclude estimated effects of weather compared to normal, as calculated internally using data from the National Oceanic and Atmospheric Administration for the applicable period.

Forward-looking Statements

Statements in this presentation not based on historical facts are considered "forward-looking" and, accordingly, involve risks and uncertainties that could cause actual results to differ materially from those discussed. Although such forward-looking statements have been made in good faith and are based on reasonable assumptions, there is no assurance that the expected results will be achieved. These statements include (without limitation) statements as to future expectations, beliefs, plans, projections, targets, estimates, strategies, objectives, events, conditions, and financial performance. In connection with the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995, Ameren is providing this cautionary statement to identify important factors that could cause actual results to differ materially from those anticipated. In addition to factors discussed in this presentation, Ameren's Annual Report on Form 10-K for the year ended December 31, 2023, and its other reports filed with the SEC under the Securities Exchange Act of 1934, as amended, contain a list of factors and a discussion of risks that could cause actual results to differ materially from management expectations suggested in such "forward-looking" statements. All "forward-looking" statements included in this presentation are based upon information presently available, and Ameren, except to the extent required by the federal securities laws, undertakes no obligation to update or revise publicly any "forward-looking" statements to reflect new information or current events.

In this presentation, Ameren has presented 2024 earnings guidance effective as of August 2, 2024, as well as multi-year earnings per share growth expectations and multi-year rate base growth expectations effective as of February 23, 2024. Earnings guidance for 2024 assumes normal temperatures after June 2024 and multi-year growth expectations assume normal temperatures. Investing in rate regulated energy infrastructure to benefit our customers, shareholders and the environment

- **\$1.7 billion invested in 2023 to support reliability, address aged infrastructure and provide clean energy to the customers and communities we serve**
 - Smart meter installation reached ~90% of electric customers, providing more precise energy usage information to customers
 - Energized 22 new or upgraded substations providing a more reliable and resilient grid
 - Reduced customer outages despite experiencing the worst storm season in over a decade
 - Stronger poles, automated switching devices and other grid upgrades helped customers avoid 31 million minutes of outages
 - Hardened ~200 miles of circuits which withstood severe storms with 50+mph winds and experienced no damage
- **\$12.4 billion¹ investment plan in 2024-2028 with focus on modernizing energy infrastructure to benefit customers**
 - Modernize grid by installing 800+ smart switches and energizing ~80 new or upgraded substations
 - Harden ~250 miles with stronger poles and wind resistant conductors to better withstand severe storms
 - Invest in ~800 MW of new dispatchable generation and ~1,775 MW of additional renewable generation
 - Drive customer reliability, enable cleaner generation, create significant jobs and stimulate economic growth
