

Consumer Price Developments in June 2024

Summary

- MAS Core Inflation eased to **2.9%** on a year-on-year (y-o-y) basis in June, from **3.1%** in May.
 - This was driven by lower inflation for retail & other goods, as well as services.
 - On a month-on-month (m-o-m) basis, core CPI was unchanged (i.e., **0.0%**).
- CPI-All Items inflation fell to **2.4%** y-o-y in June, from **3.1%** in May.
 - The slowdown was largely due to a decline in private transport costs, in addition to lower core inflation.
 - On a m-o-m basis, CPI-All Items decreased by **0.2%**.

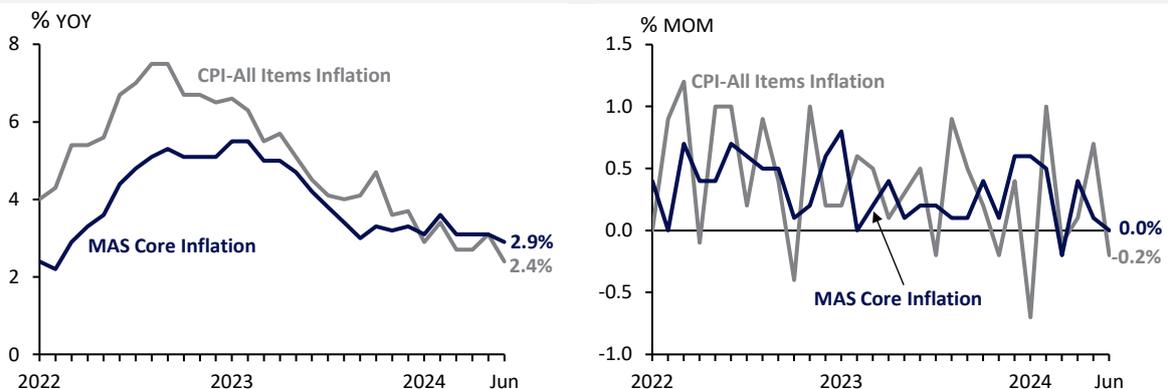

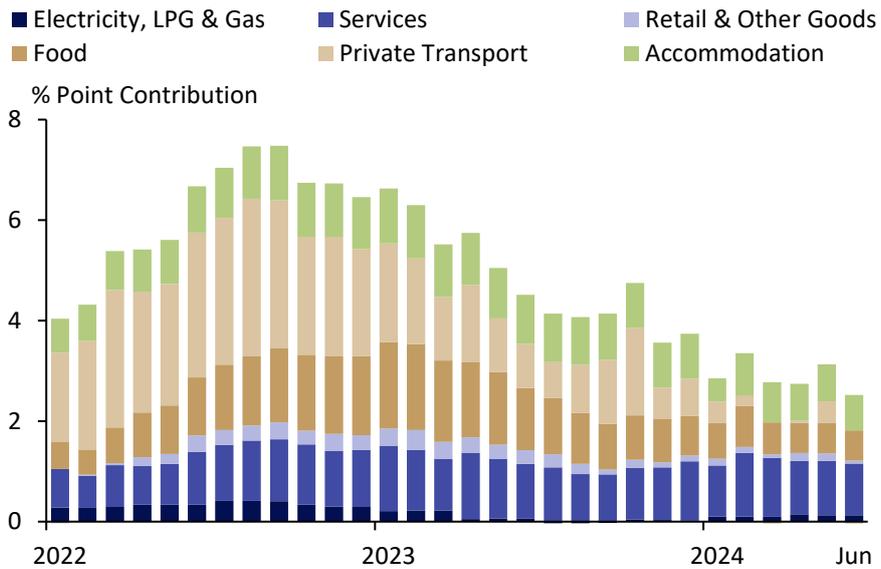

Chart 2: % Point Contribution to Year-on-year CPI-All Items Inflation

* Private transport and accommodation are excluded from the MAS Core Inflation measure.

Source: MAS, MTI estimates

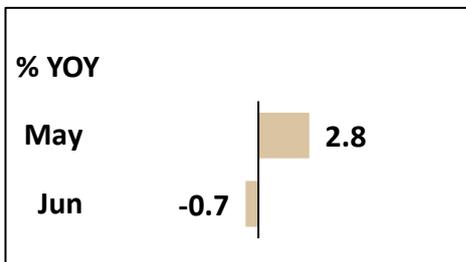

CPI-All Items inflation decreased to 2.4% y-o-y in June.

CPI-All Items

CPI-All Items inflation eased on account of a decline in private transport costs, as well as lower inflation for retail & other goods, services and accommodation.

Private Transport

Private transport costs fell as the prices of cars and motorcycles declined. Petrol prices also rose at a slower pace.

Retail & Other Goods

Retail & other goods inflation slowed as the prices of medicines & health products and personal effects recorded smaller increases, while the prices of clothing & footwear fell more steeply.

Services

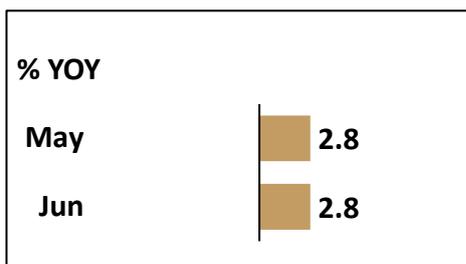

Services inflation moderated on the back of a slower pace of increase in the cost of hospital services and holiday expenses.

Accommodation

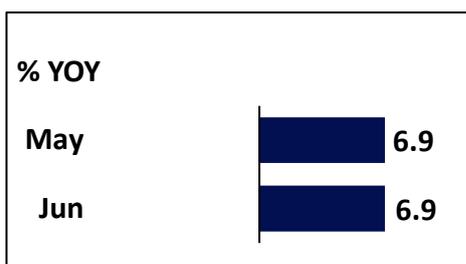

Accommodation inflation edged down as housing rents rose at a more modest pace.

Food

Food inflation was broadly unchanged, reflecting stable food services inflation.

Electricity & Gas

Electricity & gas inflation was unchanged as both electricity and gas prices rose at a steady pace.

Outlook

Global prices of energy and most food commodities have remained relatively stable in recent months. The costs of Singapore's imported intermediate and final manufactured goods have also continued on a broad decline. Inflation for services associated with overseas travel should moderate further over the course of the year as the air transport and hospitality sectors around the world restore supply. Meanwhile, the gradually strengthening S\$ trade-weighted exchange rate should continue to temper Singapore's imported inflation in the months ahead.

On the domestic front, increases in unit labour costs have slowed in tandem with the cooling labour market. Nonetheless, businesses are likely to continue passing through the earlier increases in labour and other business costs to consumer prices, albeit at a reduced pace.

MAS Core Inflation is expected to stay on a gradual moderating trend over the rest of the year and step down more discernibly in Q4 2024, as import cost pressures continue to decline and tightness in the domestic labour market eases further.

Private transport inflation is expected to moderate from last year amid the larger projected COE supply this year. Accommodation inflation should also continue to ease as the supply of housing units available for rental increases over the course of the year.

For 2024 as a whole, core inflation is projected to average 2.5–3.5%. Excluding the transitory effects of the 1%-point increase in the GST rate to 9%, it is expected to come in at 1.5–2.5%. The forecast range for CPI-All Items inflation is being reviewed and will be updated in MAS' July 2024 Monetary Policy Statement.¹

Risks to the inflation outlook remain. Fresh geopolitical shocks, adverse weather events and renewed transportation disruptions around the world could put upward pressure on global energy and food commodity prices, as well as shipping costs. Domestically, a stronger-than-expected labour market could lead to a re-acceleration of wage growth. Conversely, an unexpected weakening in the global economy could induce a greater easing of cost and price pressures.

¹ The MAS Monetary Policy Statement will be issued on 26 July 2024 at 8.00am.

Annex: Price Indicators

CPI-All Items

The CPI is commonly used as a measure of consumer price changes in the economy. It tracks the change in prices of a fixed basket of consumption goods and services commonly purchased by the general resident households over time.

The CPI covers only consumption expenditure incurred by resident households. It excludes non-consumption expenditures such as purchases of houses, shares and other financial assets and income taxes etc.

The CPI-All Items provides a comprehensive overview of the prices of consumer goods and services. Nevertheless, useful information can also be revealed by complementary CPI series derived by excluding specific items in the All Items basket. For example, two other CPI series reported on a monthly basis are the CPI less imputed rentals on owner-occupied accommodation and the MAS Core Inflation.

MAS Core Inflation

The Monetary Authority of Singapore (MAS) monitors a core inflation measure that excludes the components of “Accommodation” and “Private Transport”. These items are excluded as they tend to be significantly influenced by supply-side administrative policies and are volatile. Core inflation is meant to capture the generalised and persistent price changes that are driven by underlying demand conditions. It thus provides useful information for monetary policy which has the objective of ensuring price stability in the medium term.

CPI less imputed rentals on owner-occupied accommodation

Accommodation, one of the groups in the Housing & Utilities expenditure division, comprises “rented and owner-occupied accommodation”, as well as “housing maintenance & repairs”.

A significant share of the Accommodation group is “owner-occupied accommodation (OOA)” cost, which reflects the costs to homeowners of utilising the flow of services provided by their homes over an extended period of time. Given that the cost of using housing services is not directly observed for homeowners, it is computed based on the imputed rental concept under the rental equivalence method, i.e., proxied by market rentals. As for the CPI for “housing maintenance & repairs”, it takes into account the rebates for service & conservancy charges (S&CC) disbursed to households living in HDB flats in the applicable months.

Imputed rentals have no impact on the cash expenditures of most households in Singapore as they already own their homes, while the inclusion of S&CC rebates results in some volatility in the monthly CPI. As such, the CPI for “All Items less accommodation” and “All Items less

imputed rentals on owner-occupied accommodation” are compiled and published as additional indicators. For “All Items less imputed rentals on owner-occupied accommodation”, actual rentals paid on rented units are still included in the measure.

CPI Statistics

Detailed CPI statistics can be found in the Department of Statistics’ release titled “Singapore Consumer Price Index for June 2024”. This release also contains further information on the various price indicators published.
