Mumbai Airport asks Air India to vacate 'non-core' land

Includes airline's four staff colonies that house 1,600 families

ANEESH PHADNIS
Mumbai, 18 April

The Adani-group owned Mumbai International Airport (MIAL) has issued a notice to Air India asking it to surrender land that is not core to its operations. This includes the airline's four staff colonies that house 1,600 families.

The notice was served on March 11, barely a month after the airline's hand-over to Tata Sons. It asks Air India to review its utilisation of airport land, enter into licence agreements on an arm's length basis with its former ground handling and engineering subsidiaries and surrender the remaining land and space to MIAL.

MIAL has given the airline 45 days notice to comply with this. It said in case of non-compliance it will have no option but to restrain the airline and its employees from entering and utilising the land.

Political support

Mumbai airport's move has attracted the attention of political parties ahead of municipal elections this year. On Sunday, Shiv Sena Member of

CRUX OF THE MATTER

■ Air India had asked employees to give an undertaking that they will **surrender quarters within six months of disinvestment**

■ **Unions opposed the move.** The issue is now before labour commissioner's office

■ **Mumbai International Airport issued a notice to Air India on March 11 to vacate land that is not core to its operations**

■ **Air India occupies around 750,000 square metres of airport land, according to the notice**

■ **Mumbai airport wants Air India to take action on its notice in 45 days**

Parliament Gajanan Kirtikar pledged support to Air India employees who are fighting possible eviction from their homes.

Kirtikar said the party was prepared to protest against the Adani group on the issue. Nationalist Congress Party's former legislator Vidya Chavan has sought the intervention of the

Maharashtra government on the issue.

Air India and Adani group did not respond to email queries on the issue. In the past, however, Air India has questioned MIAL's right to issue vacation notices, it is learnt.

According to MIAL, Air India is utilising around 750,000 square metres of airport land in Kalina and Sahar

areas of Mumbai. This includes offices, hangars, cargo warehouses, ramp operation office, housing colonies, sports club and also developed and vacant land that is used for parking of ground services equipment.

"The issue here is Air India has been paying a pittance for utilising the airport land, while MIAL would like to charge commercial rates. It could not do so thus far because Air India was a government entity," said a person in the know. He added that several years ago there was a plan to construct towers for Air India offices and staff quarters in the Kalina area and surrender balance land to MIAL, but the proposal fell through.

The Airports Authority of India had licensed parcels of land to Air India and the erstwhile Indian Airlines. However, over time these licences expired. Arrangements to finalise agreements with Air India after expiry of licences did not materialise and the airline continued to pay highly concessional rates till its revision in 2018. MIAL took over operations of the airport in 2006. Similarly, the notice says that the airline continues to use space in airport terminals at highly concessional rates and no licence agreement was executed.

India will have over 250 unicorns by 2025: Report

PEERZADA ABRAR
Bengaluru, 18 April

India will have more than 250 unicorns by 2025. This prediction comes from the proprietary data analysis of venture growth investor Iron Pillar in its Tech Unicorns Market Landscape Report IV. InMobi was India's first unicorn in 2011. Since then, 129 start-ups have joined this star status, of which 100 were added from January 2019, generating a total value of \$535 billion.

Entrepreneurs are building bigger enterprises at a much faster rate — 50 per cent of the 130 companies reached unicorn status in the first five years after their initial institutional fund-raise. The public listing of 12 unicorns is another indicator of the increasing maturity of the Indian technology (tech) ecosystem.

"The total number of unicorns built from India more than doubled from 62 to 130 in the

past 15 months," said Anand Prasanna, managing partner, Iron Pillar, adding, "While we believe this pace may reduce somewhat in the next 24 months, creating 250 companies with over \$1 billion in value by 2025 is an extremely activable goal for Indian founders. We are especially bullish, given 50 per cent of these scaled-up companies are building for markets beyond India as well." Unicorns built from India included 58 global Cloud companies, 59 business-to-consumer (B2C) companies, and 13 business-to-business (B2B) companies.

Companies building Cloud products for the world from India are extremely capital-efficient, reaching unicorn status with 42 per cent less capital, compared to B2C companies. They also outperform on value created per unit of capital raised and the number of exits.

Indian tech start-ups notched up \$42 billion funding in 2021 alone.

INDIA IS 3RD LARGEST TECH MARKET

- **\$2.7 trn:** 5th largest GDP in the world, on path to be the 3rd largest
- **\$42 bn raised by tech companies in India in 2021**
- **10,000+ start-ups in India with funding**
- **780 mn:** Internet users in India; 2nd largest in the world
- **\$198 bn:** total value of 58 cloud unicorns built from India
- **\$418 bn:** market capitalisation of top 5 Indian tech services companies
- **25% global science and engineering graduates from India**
- **\$136 bn total value generated from exited unicorns**
- **130 unicorns created; 100 in the last three years; 12 publicly listed**

An Ecosystem for Development of Solar Manufacturing in India

19 April, 2022, New Delhi

Chief Guest
Shri R K Singh
Hon'ble Union Minister for Power, New & Renewable Energy

An end-to-end integrated domestic solar PV manufacturing value chain (incl. cells, modules and ancillaries) is critical for cost-competitiveness in the global market

Focus areas:

- Key factors impacting domestic solar manufacturing
- Roadmap for competitiveness for solar value chain
- Implementation of new Solar PLI Scheme for integrated solar value chain
- Tariff and Non-Tariff Barriers
- R&D framework
