

Cotton: World Markets and Trade

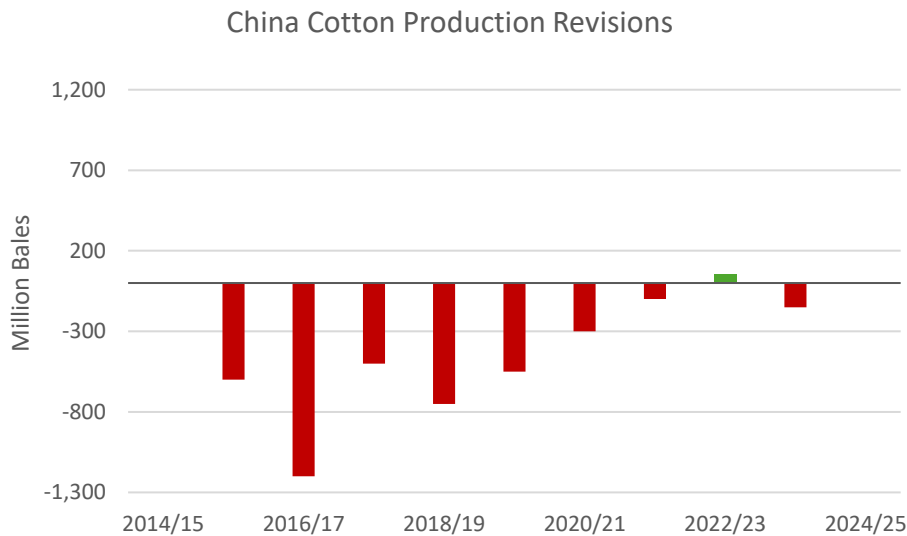

Historical China Cotton Stocks Revised Downward

China’s 2024/25 (August 2024 – July 2025) ending stocks are reduced nearly 3.9 million bales this month, largely due to revised production estimates dating back to 2015/16 and an adjustment to the loss category in 2021/22. Additional adjustments to domestic use were also included. With this month’s revisions, China’s 2024/25 stocks remain substantial at 37.1 million bales and account for nearly half of global stocks.

Production

Downward adjustments to historical production this month totaled 4.1 million bales and are entirely attributed to lower estimates for production outside of Xinjiang between 2015/16 and 2022/23 due to lower area. The 2023/24 adjustment mainly reflects final reported ginnings in Xinjiang.

Area and production outside of Xinjiang has trended lower over the past decade: in 2014/15, non-Xinjiang production accounted for approximately one-third of the country’s total crop but is now estimated at just 5 percent.

Domestic Use

Revisions to domestic use prior to 2023/24 were minor with all changes accounting for less than 1 percent of each marketing year’s total.

Downward adjustments to domestic use this month totaled nearly 2.2 million bales due to lower estimates for 2023/24 and 2024/25. Lower operating rates and higher-than-expected stocks in June 2024 lowered the 2023/24 consumption forecast by 1.0 million bales to 37.5 million. Lower imports and stable consumption growth drove 2024/25 consumption down by the same volume to 38.0 million.

Loss

In marketing year 2021/22, the China Cotton Reserve Company (CCRC) auctioned domestic cotton from reserves that included supplies harvested between 2011 and 2013. Roughly 625,000 bales from those respective years remained after the sales program and were never officially auctioned through CCRC's sales program again. Therefore, 625,000 bales are categorized as loss in marketing year 2021/22.

Ending Stocks

Historical revisions to production more than offset recent downward adjustments to domestic use and lower 2024/25 ending stocks by nearly 10 percent this month. Despite the downward adjustment, USDA stock estimates remain higher than industry estimates. However, the definition of stocks and timing varies between sources.

The table on the next page outlines USDA's revised assumptions for 2022/23 China stocks ending July 31, 2023 (the last marketing year with complete data) at 33.1 million bales. For comparison, this is roughly 7.0 million bales higher than the 2022/23 estimate of 26.2 million bales (stocks as of August 31, 2023) from a public and prominent industry source; the estimate includes state reserves.

From a seasonal perspective, the end of August typically exhibits the lowest level of commercial stocks each year in China; for example, the commercial stock estimate for the same source at the end of August 2023 was more than 3.0 million bales lower compared with the month before.¹ This partly explains higher USDA estimates; however, assumptions regarding spinning mills' inventories and commercial stocks outside Xinjiang are the main factors driving higher USDA projections.²

¹ This is partly due to the onset of the domestic cotton harvest at the end of August.

² Commercial stocks essentially include all physical bales outside government warehouses and spinning mills. For example, this typically includes cotton in consignment and physically at a farm, gin, warehouse outside the mill premise, or in-transit. Note that USDA stock estimates include all cotton physically within the country.

USDA Estimated Ending Stock (as of Jul. 31, 2023)	Volume (Million Bales)
2022/23 Ending Stock Estimate (Aug-Jul)	33.1
Commercial Stocks in Xinjiang*	6.5
Commercial Stocks outside Xinjiang*	5.0
Consignment (customs cleared and uncleared)	1.6
Mill Stocks	6.6
State Reserves	13.4

Note: *Includes cotton in transit and excludes consignment.

2024/25 Outlook

Production is forecast down over 2.5 million bales to 117.6 million due to decreases in the United States and India on lower area harvested. Global consumption is down roughly 1.0 million bales to 116.2 million as decreases in China and Bangladesh more than offset greater consumption in Pakistan and Turkey.

Global trade is projected down again by nearly 1.0 million bales to 43.6 million as lower China imports more than offset higher India imports. U.S. exports are lowered 1.0 million bales. Global ending stocks are projected down more than 5.0 million bales to 77.6 million on historical revisions to China production and lower U.S. production.

The U.S. season-average farm price for 2024/25 is forecast down 2 cents to 66 cents per pound.

2024/25 Trade Outlook (1,000 480-lb Bales)				
Major Importers:				
	Previous	Current	Change	Reason
WORLD	44,951	43,634	-1,317	
China	11,500	10,000	-1,500	No announcement of reserve sales
India	1,500	2,000	500	Competitive foreign prices
Bangladesh	8,000	7,800	-200	Lower consumption
Pakistan	3,900	4,000	100	Higher consumption
Turkey	4,700	4,800	100	Higher consumption

2024/25 Trade Outlook (1,000 480-lb Bales)

Major Exporters:

	Previous	Current	Change	Reason
WORLD	44,951	43,541	-1,410	
United States	13,000	12,000	-1,000	Lower production

2023/24 Outlook

Global production is lowered roughly 100,000 bales to 113.6 million on small reductions across West Africa. Consumption is forecast down around 900,000 bales to 112.4 million. Decreased use in China more than offsets greater use in Pakistan and Mexico.

Global exports are forecast up more than 500,000 bales to 44.7 million, partially attributed to higher-than-expected U.S. exports due to late reporting of shipments in the most recent USDA Export Sales report. Global imports are up 100,000 bales to 43.4 million as higher Pakistan imports more than offset lower imports for Vietnam and Bangladesh.

Global ending stocks are projected down more than 3.5 million bales to 75.8 million on historical revisions to China production. The U.S. season-average farm price remains at 76 cents per pound.

2023/24 Trade Outlook (1,000 480-lb Bales)

Major Importers:

	Previous	Current	Change	Reason
WORLD	43,278	43,407	129	
Pakistan	2,700	3,000	300	Import data
Bangladesh	7,400	7,300	-100	Lower consumption
Vietnam	6,800	6,700	-100	Import data

Major Exporters:

	Previous	Current	Change	Reason
WORLD	44,213	44,730	517	
United States	11,600	11,750	150	Late reporting of Export Sales shipments

Futures and Spot Prices

Since the last WASDE report, cotton futures on the Intercontinental Exchange (ICE) fell to their lowest level in nearly 4 years before settling at roughly 68 cents per pound. Lower commodity prices and greater short positions from Non-Commercial participants pressured the 2024 December contract. The

latest Commodity Futures Trading Commission *Commitment of Traders* supplemental [report](#) for futures and options showed the net long position for both Non-Commercial and Index participants was the lowest in nearly 5 years at around 8,000 contracts.

Weekly ICE Cotton Futures and Bloomberg Commodity Spot Index

Note: The Intercontinental Exchange nearby Cotton No.2 Futures contract is reflected and found [here](#). The Bloomberg Commodity Spot Index (BCOMSP) is listed [here](#). The index measures the price movements of futures contracts for various commodities. It does not account for the effects of rolling futures contracts, or the costs associated with holding physical commodities and is quoted in USD.

Changes Since July WASDE (cents per pound)

	A-Index	U.S.	China	India	Brazil	Pakistan
10-Jul	81.0	60.6	97.9	88.0	75.7	79.9
8-Aug	79.2	59.2	94.4	85.7	72.7	75.9
Change	-1.8	-1.4	-3.5	-2.3	-3.0	-4.0

U.S. spot prices are down once again to below 60 cents per pound, over 30 cents lower compared with prices in February. Basis is up with Southeast at -350 basis points, North Delta climbing to -450, and West Texas-Kansas-Oklahoma rising to -825. Average basis across the United States is down 400 points relative to last year to -800.

China prices are down nearly 4 cents to 94 cents per pound with the nearby futures contract (September) on the Zhengzhou Commodity Exchange (ZCE) also down for the third consecutive month to roughly 13,400. Basis (relative to ICE) was up slightly to around 2,900 points, the same level as last year.

India prices are down around 2 cents, settling at 86 cents per pound. Basis is up for the third consecutive month to around 1,800 points, more than 1,100 above the same time last year.

Brazil prices are down 3 cents to 73 cents reflecting lower ICE futures. Basis is unchanged from last month at 400 points but above last year's level of -400 points.

Pakistan prices are down 4 cents per pound to 76 cents per pound. Basis is up slightly to around 900 points but over 2,000 points higher relative to last year.

The observed **A-Index** this month includes the simple average of the following 5 quotes: Brazil, Ivory Coast, Burkina Faso, Greece, and Memphis/Orleans/Texas. Brazil is once again the lowest quoted origin at 76.26 cents per pound; Memphis/Orleans/Texas is the highest at 80.25 cents. The A-Index relative to ICE is roughly 11 cents higher and slightly above the previous year. Note the A-index includes the 5 *cheapest* origins of 'medium grade' cotton landed at a port in the Far East; quotations are compiled and published daily.

Spot Quotation Minus ICE Futures (2023 vs. 2024)

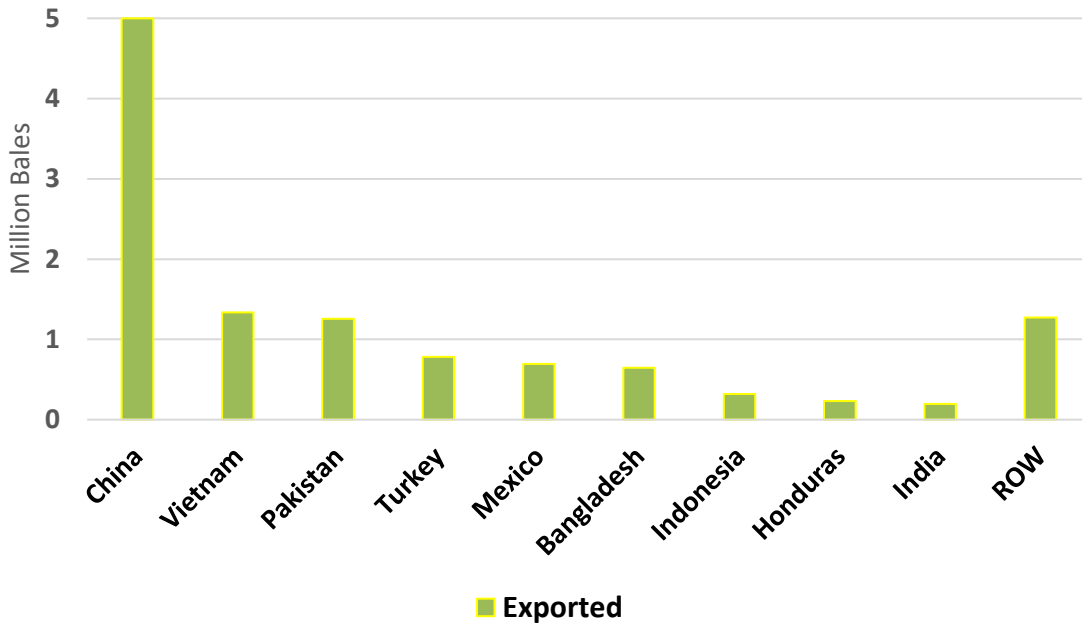

Notes: The chart visualizes a general value for basis (i.e., cash price minus futures). Quality and location (gin, port, textile mill, etc.) are significant in determining the quotation's relative value and basis, please see [Notes on Price Series](#) for more information.

Weekly Cotton Prices

[Notes on Price Series](#)

U.S. 2023/24 Shipments (Aug. 1, 2023 - July 31, 2024)

Source: USDA FAS Export Sales Reporting (ESR); Note: ROW (Rest of World)

China Cotton Yarn Futures Relative to Cotton

Note: *A-Index is a customs-cleared estimate in China (including 1-percent tariff and 9-percent Value Added Tax). The cotton yarn and cotton futures prices used are the nearby contracts on the Zhengzhou Commodity Exchange.

A time series showing the difference in the futures price of cotton yarn and cotton lint is an indicator of potential changes in spinners' profitability and thus marginal changes in global cotton consumption. China yarn futures are included here because of the country's prowess as the largest cotton yarn manufacturer (i.e., cotton consumer) and importer of cotton fiber and yarn.

Cotton Fiber Relative to Competing Fibers

Note: *A-Index is a customs-cleared estimate in China (including 1-percent import tariff and 9-percent Value Added Tax); Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF). China Cotton is the spot price noted in the Price Series below.

A time series showing the difference in the spot price of cotton fiber relative to Polyester Staple Fiber (PSF) and Viscose Staple Fiber (VSF) is an indicator of potential changes in spinners' incentive to increase their substitution of synthetic and artificial fibers for cotton. China is depicted here because the country is the largest consumer of all fibers. The A-Index is also included to derive the difference in price between imported cotton and competing fibers in China.

Questions may be directed to:

Graham Soley – Foreign Agricultural Service 202-772-4235 (graham.soley@usda.gov)

Stephanie Galbraith – Foreign Agricultural Service 771-221-5954 (stephanie.galbraith@usda.gov)

Notes on Price Series

A-Index is published by Cotton Outlook and reflects the average of the five cheapest quotations (quality being middling 1^{1/8} inch) of upland cottons traded internationally; the delivery price reflects Cost and Freight (CFR) to a Far Eastern Port.

U.S. is the simple average reported by the Agricultural Marketing Service, Free On Board (FOB) car/truck across seven U.S. spot markets of grade strict low middling.

China is the reported China Cotton Price Index (i.e., CCIIndex 3128B) and reflects the national weighted average of middling grade cotton; the delivery price is at the textile mill in China.

India is the Shankar-6 (middling grade 29-3.8-76) spot price and is reported ex-gin (at the gin yard) in Gujarat.

Brazil is strict low middling and reflects the delivered price to a mill in São Paulo.

Pakistan is the ex-gin (at the gin yard) price in Karachi reflecting a 1^{1/16} inch staple and grade 3.

Production, Supply, and Distribution (PSD) Attributes for Cotton

(Note: Area Harvested is reported in thousand hectares and all other attributes in thousand 480-lb bale equivalents.)

Marketing Year: August – July, for example, the 2023/24 marketing year is August 1, 2023 – July 31, 2024.

Area Harvested: The area of land planted to cotton from which seed cotton is harvested.

Beginning Stocks: The quantity of cotton lint physically located within a country on August 1 (the first day of the marketing year, for example, August 1, 2023 of the 2023/24 marketing year) and includes cotton lint in transit. Beginning stocks equal the ending stocks of the previous year.

Production: The quantity of cotton lint ginned from harvested seed cotton during the marketing year and does not include cotton [linters](#) (short fibers attached to cottonseed).

Imports/Exports: The quantity of cotton lint physically imported into or exported from the country during the respective marketing year. This includes the Harmonized System (HS) code specific to the four-digit heading 5201 (Cotton, not carded or combed) and specific to unprocessed cotton lint. For some countries, imports include cotton bales in bonded warehouses that have *and* have not cleared customs.

Domestic Use: Also referred to as cotton consumption or mill use. All cotton lint that has been processed during the marketing year and excludes cotton linters. Domestic yarn production (100% cotton fiber or cotton blended with other fibers) usually accounts for more than 90 percent of domestic use. Yarn production occurs at a spinning mill and hence is also referred to as “spinning”. Use outside of yarn production typically includes nonwoven fabric production (see [nonwoven products](#)).

Ending Stocks: The quantity of cotton lint physically located within a country on July 31 (the last day of the marketing year, for example, July 31, 2024, of the 2023/24 marketing year) and includes cotton lint in transit. Ending Stocks will always equal the following year's beginning stocks.

Loss: Cotton that has been destroyed or cannot be accounted for. Loss may also include "negative loss" when the estimates of Ending Stocks exceed the difference between **Total Supply** and total use (total use is equal to **Exports** plus **Domestic Use**).

Other Terminology

Cotton Textiles: Refers to both the yarn and fabric industries. This mostly pertains to spinning mills (yarn manufacturers), weavers (woven fabric manufacturers), and knitters (knit fabric manufacturers).³

Cotton Products: Refers to end-use products including apparel and home goods (e.g., towels and bed sheets) as well as [nonwoven products](#) (e.g., medical and hygiene products). When referencing "cotton product" trade data, certain imports are not included that contain cotton fiber. Circular analyses include HS (Harmonized System) codes that specify cotton as the primary fiber and typically state "of cotton" in the product code description.

Garment Manufacturers: Typically reflects cut-and-sew and finishing operations to assemble and produce the final end-products such as apparel (i.e., cotton products).

Example of Cotton Supply Chain

Cotton planted [**Farm**] → Cotton harvested [**Farm**] → Cotton ginned to separate lint from seed and compressed into bale (represented as Production in the PSD) [**Gin**] → Cotton bales spun into yarn or fibers processed into nonwoven products (represented as Domestic Use in the PSD) [**Spinning Mill**] → Yarn woven or knit into fabric [**Fabric Mill**] → Fabric is dyed and processed [**Fabric Mill**] → Finished fabric is cut-and-sewn into apparel or other finished product [**Garment Manufacturer**] → [**Retailer**]

The Foreign Agricultural Service (FAS) updates its production, supply, and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.
