Obs:

- Frade figures account for a 70% interest in the Frade Field until February 4 and 100% interest as of February 5, when the Company announced the closing of the acquisition of the remaining 30% interest.
- Since February, Tubarão Martelo Field's production was lower due to a shutdown in the TBMT-8H well, as a result of a failure in the electric submersible pump (ESP), which operated since the beginning of the field's production. The workover has been occurring, after some difficulties in removing and laying the production column in order to replace the pump. This workover is expected to be concluded in July.
- On November 5, 2020, the sale of the 10% interest in the Manati Field held by PetroRio was announced, which awaits precedent conditions for the transaction's closing.
- Polvo Field's production in May was restricted due to water processing limitations at the Polvo FPSO. This FPSO, leased to the field and operated by BW, is expected to be decommissioned in July, after the conclusion of Polvo and Tubarão Martelo tieback.
- In June, the Tubarão Martelo Field production was paused for 7 days due to necessary adjustments at the FPSO for one of the tieback's final steps, which should be concluded in the next days.
