

# Wilshire Premier+ Allocation Portfolios

As of September 30, 2021

## Wilshire Premier+ Allocation Portfolios

The Wilshire Premier+ Allocation Portfolios are a series of six risk-optimized, multi-asset class mutual fund models designed to leverage the asset allocation, manager research and portfolio construction expertise of Wilshire.

## Product Description

- **Institutional investment managers** – Portfolios are anchored by the Wilshire Mutual Funds, which are subadvised by third-party institutional asset managers.
- **No strategist fee** – Wilshire doesn't charge a strategist fee. Wilshire is the sponsor and the investment adviser of the Wilshire Mutual Funds (the "Funds") and receives advisory fees based on a percentage of the assets in the Funds.
- **Dynamic management** – Wilshire dynamically tilts the Portfolios, emphasizing assets and strategies that appear to be attractive and undervalued and de-emphasizing assets and strategies that are not.
- **Risk-based, multi-asset class portfolios** – Wilshire develops forward-looking, strategic forecasts based on proprietary institutional data to determine the asset allocation policy.
- **Alternative investments** – The Portfolios offer varying allocations to alternative mutual funds that seek to enhance diversification beyond traditional stock and bond exposures. Wilshire has a long history of building portfolios with allocations to alternative investments intended to help investors improve diversification in a risk-appropriate manner.

## Wilshire Mutual Funds Subadvisers:

**ALGER**

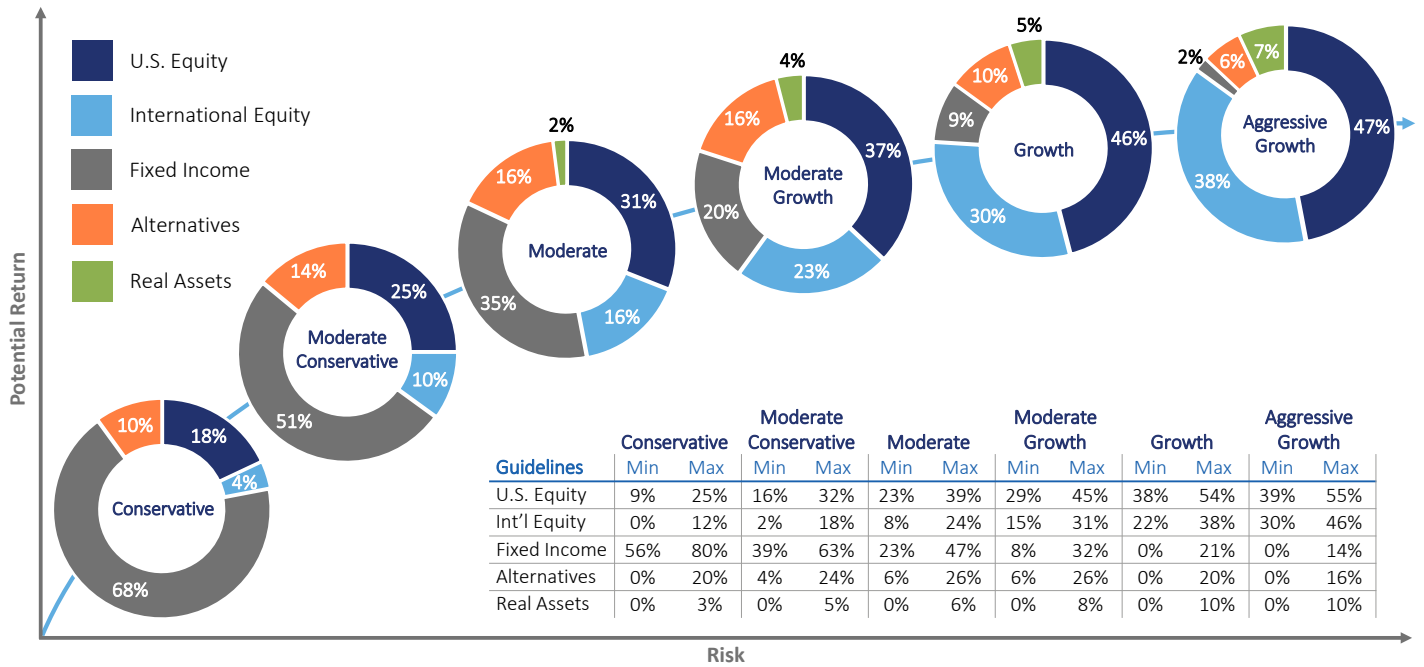

**LAZARD**

Aggressive Growth inception date is 4/27/2012.

\*Standard Deviation (St. Dev.): a statistical measurement that sheds light on historical volatility. A higher number indicates a higher degree of volatility, by indicating the return on the investment is deviating from the expected normal returns.

For details about the composition of the Custom Benchmarks, see the next page.

## Information Regarding Performance Data

The performance results above should be reviewed in the context of the markets applicable to the investment strategies noted. There are certain limitations in model performance as the model results will not completely represent the actual trading of securities in a client account. The results reflect reinvestment of all dividends and interest. All returns for periods greater than one year are annualized. Actual client results will be lower based on the imposition of platform fees, advisory fees, transaction fees and custodial fees by third party firms. Due to differences in share classes and platform restrictions preventing the use of some securities, such as exchange-traded funds, Wilshire's preferred allocation may not be available on all platforms. When a specific security or financial instrument is unavailable, Wilshire will use a substitute security that is suitable in the context of the portfolio's stated investment objective. As with all investments, there is no guarantee that the investment strategy will be successful and investors should be aware that investments can lose money, including principal, so that an investor could end up with less money than was invested. Past performance is not indicative of future results, and processes used may not achieve the desired results. It is not possible to invest directly in an index. Index returns do not reflect payment of certain sales charges or fees an investor may pay to purchase the securities underlying the index or investment vehicles intended to track the performance of the index. The imposition of these fees and charges would cause actual performance of the securities/vehicles to be lower than the index performance shown.

## Important Information

This material is for information purposes only. Wilshire is the sponsor and investment adviser of the Wilshire Mutual Funds and receives advisory fees based on a percentage of the assets in the Wilshire Mutual Funds.

**Investments in equities** are subject to market risk so that shares, when redeemed, may be worth more or less than their original cost. Security prices can fluctuate significantly in the short term or over extended periods of time. These price fluctuations may result from factors affecting individual companies, industries, or the securities market as a whole. **Investments in small cap stocks** may be subject to a higher degree of market risk than large cap stocks, or more established companies' securities. Furthermore, the illiquidity of the small cap market may adversely affect the value of an investment. **Investments in bonds** are subject to interest rate, inflation, credit, currency and sovereign risks. **Investments in high yield bonds**, often referred to as "junk bonds," are subject to greater credit risk and price fluctuations than higher quality issues. **Investments in international securities** involve additional risks including currency rate fluctuations, political and economic instability, differences in financial reporting standards, and less stringent regulation of securities markets. In addition, the **risks of investing in emerging market securities** are greater than those of investing in securities of developed foreign countries.

**Risks of investing in real estate securities** are similar to those associated with direct investments in real estate, including lack of liquidity, limited diversification, sensitivity to certain economic factors such as interest rate changes and market recessions, and falling property values due to increasing vacancies or declining rents resulting from economic, legal, political or technological developments. **An alternative investments strategy** is subject to a number of risks and is not suitable for all investors. Investing in alternative investments is only intended for experienced and sophisticated investors who are willing to bear the high economic risk associated with such an investment.

Model portfolios are exposed to the specific risks of the underlying funds in direct proportion to their percentage allocation. The funds comprising the models and the allocations to those funds have changed over time and may change in the future.
